**NOTICES**

*If there is a divergence between the information in the printed version of the Graduate Calendar or any of the departmental web pages within the RMC website and, that in the Graduate Calendar web pages, the information in the Graduate Calendar web pages will prevail, since it is recognized as the official Calendar.*

The course listings and academic programmes described in this Calendar represent Senate-approved requirements and electives for completion of degree requirements. Circumstances beyond the control of the University, such as severe budget shortfalls, may result in restrictions in the number and range of course and programme choices available to students as compared with those listed herein or in other University publications. The University reserves the right to limit access to courses or programmes, and, at its discretion, to withdraw particular programmes, options, or courses altogether.

In such circumstances the University undertakes to the best of its ability to enable students registered in affected programmes to complete their degree requirements in a satisfactory manner. Prospective students or new registrants are advised to consult the most current information available from the Offices of the Graduate Studies Division and/or of the Registrar in printed or electronic form before making registration decisions or course/programme choices.

The Senate and the Board of Governors of the Royal Military College of Canada reserve the right to invoke changes in this Calendar, in either its printed or electronic forms, at any time without prior notice. The Website address is [http://www.rmc.ca/academic/grad/index_e.html](http://www.rmc.ca/academic/grad/index_e.html).

---

**Graduate Studies & Research Division**

**1.1 GRADUATE STUDIES & RESEARCH OFFICE**
1.2 BACKGROUND

The Division of Graduate Studies was established by the RMC Senate in 1959. The title became Division of Graduate Studies and Research in 1963. The first graduate degree was granted in 1966.

The mission of the Division of Graduate Studies and Research is to provide advanced degree programmes and professional development for postgraduate students in key areas of engineering, humanities, and science in support of the Canadian Forces, to carry out research at the level needed to sustain the teaching programmes, and to support the CF mandate through collaboration and alliance with Defence Research & Development Canada (DRDC), the Defence Research Establishments, Engineering Classifications, and Operational Commands.

The Chairs of the Division have been:

<table>

</tbody>
</table>
1.3 OFFICERS OF THE DIVISION

**Acting Dean:**

R.D. WEIR, CD - BSc (New Brunswick), DIC, PhD (London), FCIC, FEIC, FIUPAC, FRSC, CChem (UK), PEng

**Associate Deans of Graduate Studies:**

B.W. Simms, CD, rmc - BEng (RMC), MASc (Toronto), PhD (Queen's) PEng;

R.Legault - BA, MA, PhD (Montreal)

**Secretary:**

P.J. Heffernan - CD, rmc, plsc, BEng, MASc, PhD (RMC)

1.4 GRADUATE STUDIES COMMITTEE

The Graduate Studies Committee is a committee of the Faculty Council and shall make recommendations to the Faculty Council concerning:

1. the promotion and development of graduate studies and research at the University;
2. the acceptability of applicants; and
3. new graduate courses and degree programmes.

In addition, the Committee will, on behalf of the Council:

1. act as a marks committee for graduate courses;
2. adjudicate the registrations and individual programmes of study of graduate students;
3. adjudicate thesis examination procedures;
4. act as the syllabus committee of the graduate faculty; and
5. ensure that the graduate studies calendar is up to date;

and will report to Faculty Council on these matters.

**Graduate Studies Committee Members:**

<table>
<thead>
<tr>
<th>Chair</th>
<th>Secretary</th>
</tr>
</thead>
</table>

1.5 Faculty of the Graduate Studies and Research Division

While all faculty members may participate in some aspects of graduate programmes, including the teaching of graduate courses, there are particular requirements to be permitted to act as the primary supervisor of a graduate student or to sit as an examiner at a thesis defence. Normally, to carry out these functions, a faculty member

a. Shall have the PhD or equivalent, it being understood that holding the rank of UT 3 (Associate Professor) or UT 4 (Professor) establishes the equivalence automatically, and

b. Shall have a recent history of productive scholarship which is reflected by the dissemination of the results of that scholarship.

By exception, new faculty members in a first university appointment are held to a lesser standard than others when assessing (b) above, for the first two years of their service at RMC.

Heads of Departments are expected to recommend to the Dean of their Faculty the names of those who meet these criteria. The Dean of the Division shall make a decision in consultation with the Dean of Graduate Studies and Research. Faculty members with complete privileges will be identified by an asterisk (*) beside their names in the graduate calendar.

The Dean of Graduate Studies may, with the concurrence of the Dean of the Division permit faculty members who are not so identified to supervise or examine a thesis in special circumstances, where the particular expertise of the faculty members aligns especially well with the thesis topic. Exceptions of this nature are more readily granted when the degree being sought is a Master's degree rather than a Doctoral degree.

**Department of Business Administration**

- *W.J. Graham, BA (Dalhousie), LLB, MBA, PhD (Queen's) - Associate Professor and Head of the Department
- *B.W. Simms, CD, rmc, BEng (RMC), MASc (Toronto), PhD (Queen's), PEng - Associate Dean of Division of Graduate Studies and Research; Professor (cross appointed to the Department of Mechanical Engineering), Chair of the MBA Program
and Co-chair of the MDS program.

- J. Brimberg, BEng, MEng (McGill), PhD (Toronto), PEng - Professor
- W.J. Hurley, BSc (Queen's), MBA (York), PhD (Queen's) - Professor
- M. Amami, BSc, LicSc.éco, PhD (Sorbonne), Ing (ENSAE, Paris) - Professor
- A. St. Pierre, BSc (Sherbrooke), BSc (UQ Montreal), MBA (McGill), CMA, CGA - Professor
- J.S. Cowan, BSc, MSc, PhD (Toronto) - Professor (adjunct)
- T. Dececchi, BEng, MBA, PhD (McMaster), PEng - Associate Professor
- P.A. Roman, CD, rmc, BEng (RMC), PhD (Queen's), PEng - Associate Professor
- N. Essaddam, BAdm (Tunis III), MBA (Ottawa), PhD (ULaval) - Assistant Professor
- F. Youssofzai, BA, (UQAM), MSc (UQAM), PhD (HEC) - Assistant Professor
- Major C. Selkirk, CD, rmc, BEng (RMC), MEng (RMC), PhD (Queen's), PEng, Assistant Professor
- A.K. Ousman, BA, MA (UQAM), PhD (Carleton) - Assistant Professor (cross appointed from Politics and Economics)
- D. Detomasi, BA (Queen's), MA (RMC), PhD (Queen's) - Assistant Professor (Adjunct)

* Faculty members with complete privileges

DEPARTMENT OF ENGLISH

- S. Lukits, BA (Trent), MA, PhD (Queen's) - Assistant Professor and Head of the Department
- S.R. Bonncastle, BA (Queen's), PhD (Kent at Canterbury) - Professor
- M. Hurley, BA, MA (Western), PhD (Queen's) - Professor
- L. Shirinian, BA (Toronto), MA (Carleton), PhD (Montreal) - Professor
- P.S. Sri, BSc, MA (Madras), MA (McMaster), PhD (Alberta) - Professor
- Capt A. Belyea, BA, MA, - Assistant Professor
- S. Berg, BA, prof. dipl. ed., MA, PhD (Alberta) - Assistant Professor
- M. McKeown, BA, MA, PhD - Assistant Professor (Adjunct)
- I. Streight, BA, MA (Victoria), PhD (Queen's) - Assistant Professor
- L.M. Robinson, BA (Acadia), MA (MB), PhD (Queen's), Assistant Professor

* Faculty members with complete privileges

DEPARTMENT OF FRENCH STUDIES

- M. Benson, BA (York), BEd (Toronto), MA(Calgary), PhD (McGill) - Associate Professor and Head of the Department.
- G. Quillard, BA, MA (Lille), MA (Toronto), PhD (Paris) - Professor
- G.J.A. Monette, BA, MA (ens) (Montreal), MA (Litt), PhD (Queen's) - Associate Professor
- S. Bastien, BA, MA, PhD - Assistant Professor
- F.-E. Boucher, BA, MA, PhD (McGill) - Assistant Professor
- P.-A. Lagueux, BA, LèsL, MA (Laval), PhD (Paris) - Assistant Professor
- C. Trudeau, BA, MA, PhD - Assistant Professor
- J. Le Ber, BA, MA, PhD - Assistant Professor

* Faculty members with complete privileges
DEPARTMENT OF HISTORY

- *M.A. Hennessy, BA (British Columbia), MA, PhD (New Brunswick) - Associate Professor and Head of Department
- R.A. Preston, BA, MA, PhD, DipEd, FRHistS - Professor Emeritus
- D.M. Schurman, BA, MA, PhD - Professor Emeritus
- * B.J.C. McKercher, BA, MA (Alberta), PhD (London) - Professor
- N.F. Dreisziger, BA, MA, Dip REES, PhD (Toronto) - Professor
- *E.J. Errington, BA (Trent), BEd (Toronto), MA, PhD, (Queen's) - Professor
- F. Gendron, BA (Montreal), MA (McGill), PhD (Sorbonne) - Professor
- *R.G. Haycock, BA (WLU), MA (Waterloo), PhD (Western) - Professor
- *A.H. Ion, BA, MA (McGill), PhD (Sheffield) - Professor
- *H.P. Klepak, BA (McGill), MA (London), PhD (London) - Professor
- *K.E. Neilson, BSc, BA, MA (Alberta), PhD (Cantab) - Professor
- J. Lamarre, BA, MA, PhD (Montreal) - Associate Professor
- R. Legault, BA (Montreal), MA (Montreal), PhD (Montreal) - Associate Professor
- S. Maloney, BA, MA (NB), PhD (Temple) - Associate Professor
- R.A. Prete, BA (Saskatchewan), MA (Brigham Young), PhD (Alberta) - Associate Professor
- Col B. Horn, BA (Waterloo), MA, PhD (RMC) - Associate Professor (Adjunct)

* Faculty members with complete privileges

DEPARTMENT OF MILITARY PSYCHOLOGY AND LEADERSHIP

- *R.C. St-John, BA (Waterloo), MA (Waterloo), PhD (Western) - Associate Professor and Head of the Department
- *M.M. D. Charbonneau, BEng (McGill), MA, PhD (Queen's) - Associate Professor
- Lieutenant-Colonel J. Knackstedt, BComm (McGill), MASC, PhD (Waterloo) - Associate Professor
- *A.A.M. Nicol, BSc (McGill), MA, PhD (Western) - Associate Professor
- *A. Okros, CD2, OMM, BComm (Manitoba), MASC, PhD (Waterloo) - Associate Professor
- K. Taktek, BA (Tunis), MSc (Montreal), PhD (UQUAM) - Associate Professor
- * J. P. Bradley, CD, BA (Prince Edward Island), MA (Western), PhD (Western) - Assistant Professor
- L. Chérif, BA (Tunis), MA, PhD (Laval) - Assistant Professor

* Faculty members with complete privileges

DEPARTMENT OF POLITICS AND ECONOMICS

- *H. Hassan-Yari, BA (Mashhad), MA, PhD (UQAM) - Professor and Head of the Department
- H.H. Binhammer, ndc, BA, MA, PhD - Professor Emeritus
- J.P. Cairns, ndc, BA, MA, PhD - Professor Emeritus
- M.D. Chaudhry, BA, MA, PhD - Professor Emeritus
- *J.J. Sokolsky, BA (Toronto), MA (Johns Hopkins), PhD (Harvard) - Professor (cross appointed to the War Studies Program) and Dean of the Division of Arts
- *P. Constantineau, BA, MA (Montreal), PhD (Heidelberg) - Professor and Vice Dean of
the Division of Continuing Studies

- P.J.S. Dunnett, BSc (Bradford), MA, PhD (Simon Fraser) - Professor (cross appointed to the Department of Business Administration) and Chair of Defence Management
- J.S. Finan, BA, MA (Queen's) PhD (LSE) - Professor
- L.Y. Luciuk, BSc, MA (Queen's), PhD (U of Alberta) - Professor
- L.C. McDonough, rmc, BA (RMC), MA, PhD (Queen's) - Professor
- P.J. Paquette, BCom (Montreal), MA, PhD (McGill) - Professor
- A.J. Whitehorn, BA (York), MA, PhD (Carleton) - Professor
- J. Boulden, BAH, MA, LLM, PhD (Queen's) - Associate Professor, Canada Research Chair, and Associate Chair of War Studies
- D.M. Last, RMC, BA (RMC), MA (Carleton), MMAS, PhD (London School Economics) - Associate Professor (cross appointed to the Business Administration Department) and Registrar
- G. Labrecque, BA, LLL, MA, PhD (Laval) - Associate Professor and Associate Chair of War Studies for Military and Strategic Studies
- N. Schwartz-Morgan, MA (Dijon), MA (Aix-en-Provence), PhD (Ottawa) - Associate Professor
- J.D. Young, BA (Guelph), MSc.Soc (Laval), PhD (Queen's) - Associate Professor
- LCol P. Goldman, BA (Toronto), LLB (UBC), LLM (Essex) - Assistant Professor of Office of Military Legal Education
- G. Labrecque, BA, LLL, MA, PhD (Laval) - Associate Professor and Associate Chair of War Studies for Military and Strategic Studies
- N. Schwartz-Morgan, MA (Dijon), MA (Aix-en-Provence), PhD (Ottawa) - Associate Professor
- J.D. Young, BA (Guelph), MSc.Soc (Laval), PhD (Queen's) - Associate Professor
- LCol P. Goldman, BA (Toronto), LLB (UBC), LLM (Essex) - Assistant Professor of Office of Military Legal Education
- J.D. Young, BA (Guelph), MSc.Soc (Laval), PhD (Queen's) - Associate Professor
- LCol P. Goldman, BA (Toronto), LLB (UBC), LLM (Essex) - Assistant Professor of Office of Military Legal Education

* Faculty members with complete privileges

**DEPARTMENT OF MATHEMATICS AND COMPUTER SCIENCE**

- G.E. Simons, BMath (Waterloo), MSc (Toronto), PhD (Waterloo) - Associate Professor and Head of the Department
- Maj A. Gosselin, BSc (CMR), MSc (INRS), PhD (RMC) - Assistant Professor
- B.J. Fugère, BSc (Montreal), MSc (Moncton), PhD (Hull) - Dean of the Division of Graduate Studies and Research - Professor
- R. Benesch, BSc, MSc (Alberta), PhD (Queen's) - Professor Emeritus
- S. Jog, BSc (Poonia), MSc (Poonia), MSc (BC), PhD (McGill) - Professor Emeritus
- M.A. Labbé, BA (Maine), MA (Maryland), PhD (Pennsylvania), MSc (Concordia) - Professor Emeritus
- A.J. Barrett, CD, rmc, BSc, MSc (RMC), PhD (London) - Professor
- M.L. Chaudhry, BA, MA (Punjab), PhD (Kurukshetra) - Professor
- R. Gervais, ndc, BA, BSc, MSc (Montreal), PhD (Montreal) - Professor
- R. Godard, Lic ès Sci, Dr 3rd Cycle (Paris), PhD (York) - Professor
- P. Gravel, ndc, BMath (Waterloo), MMath (Waterloo), PhD (Montreal) - Professor
- L.E. Haddad, Lic ès Sci (Beyrouth), MSc (Montreal), PhD (Montreal) - Professor
- G. Isac, LSc (Bucarest), DSc (Bucarest) - Professor
- R.E. Johnson, BSc (McMaster), MS (Pennsylvania), PhD (Pennsylvania) - Professor
- G. Labonté, BSc, MSc (Montreal), PhD (Alberta) - Professor
- C.D. Shepard, BSc, MA (Queen's), PhD (Illinois), PEng - Professor (cross appointed from Electrical & Computer Engineering)
• *R.M. Shoucri, BSc (Alexandria), MSc (Laval), MSc (Illinois Institute of Technology), PhD (Laval), PEng - Professor
• *D.L. Wehlau, BSc (Western Ontario), MA (Brandeis), PhD (Brandeis) - Professor
• *C. Tardif, BSc, MSc, PhD (Montreal) - Associate Professor
• *P. Baille, Lic ès Sci, Dr 3rd cycle (Toulouse), PhD (York) - Assistant Professor
• *D. Kelly, BSc (Toronto), BEd (Toronto), M.Eng (RMC), PhD (RMC) - Assistant Professor
• *G.S. Knight, CD, rmc, BSc, MSc (RMC), PhD (Queen's), PEng - Associate Professor (cross appointed from Electrical & Computer Engineering)
• *Y. Liang, BSc, MSc, PhD (Leeds) - Assistant Professor
• *Maj L. Massey, BA (RMC), MSc (RMC), PhD (RMC) - Assistant Professor
• *B.G. Ong, BSc (Queen's), SM (MIT), PhD (Queen's), PEng - Assistant Professor
• *D. Rinfret, BMath (Trois-Rivières), PhD (Massachusetts) - Assistant Professor
• M. Krajecki, Lic ès Sci, PhD (Metz) - Assistant Professor (Adjunct)
• *Maj C. Selkirk, CD, rmc, BEng (RMC), MEng (RMC), PhD (Queen's), PEng - Assistant Professor (Adjunct)
• D.B. Skillicorn, BSc (Sydney), PhD (Manitoba) - Professor (Adjunct)

* Faculty members with complete privileges

**DEPARTMENT OF PHYSICS**

• *T.J. Racey, BSc (Waterloo), BEd (Queen's), MSc, PhD (Guelph) - Professor and Head of the Department
• *R. Favreau, BSc, MSc, PhD (McGill) - Professor Emeritus
• *N. Gauthier, BA, BSc (Laval), MSc, PhD (Toronto) - Professor Emeritus
• *G. Akhras, DipIng (Aleppo), MSc, PhD (Laval), ing, Fellow CSCE, Fellow ASCE, Fellow EIC, Director Center for Smart Materials and Structures - Professor (cross appointed from Civil Engineering)
• *J.R. Buckley, BSc (McMaster), PhD (British Columbia) - Professor
• *A.R. Lachaîne, BSc, MSc, PhD (Ottawa) - Professor
• *R.F. Marsden, rmc, BSc (RMC), PhD (British Columbia) - Dean of the Division of Science; Professor
• *B.K. Mukherjee, BSc, PhD (St. Andrews) - Professor
• *S. Ranganathan, ndc, BSc, MSc (Delhi), MTech (IIT), PhD (Cornell) - Professor
• *P.L. Rochon, BSc, PhD (Ottawa), PEng - Professor
• *P.J. Schurer, BSc, MSc, PhD (Groningen) - Professor
• *M.W. Stacey, BSc (British Columbia), PhD (Dalhousie) - Professor
• *A. Crawford, BSc (Dalhousie), MSc, PhD (Memorial Newfoundland) - Associate Professor (Adjunct)
• *T.W. Krause, BSc (Calgary), MSc, PhD (McMaster) - Associate Professor
• *Captain A. MacGiolla Chainnigh, CD, rmc, BEng (RMC), MSc, PhD (Calgary) - Associate Professor (cross appointed from Electrical and Computer Engineering)
• *J.-M. Noël, BSc, MSc (Laurentian), PhD (Western), PPhys - Associate Professor
• *G. Wade, BSc (Toronto), MSc, PhD (Western) - Associate Professor
• *R. Zee, BASc (Waterloo), MASC, PhD (Toronto) - Associate Professor (Adjunct)
• *Lieutenant Commander D. Burrell, BSc, MSc (Manitoba), PhD (Calgary) - Assistant Professor
• *Captain S. Dubois, rmc, BEng (RMC), MASc (Toronto), PhD (Queen's) - Assistant Professor
• Major M. LABRECQUE, CD2, rrmc, BSc (RRMC), MSc (RRMC) - Assistant Professor
* Faculty members with complete privileges

DEPARTMENT OF CHEMISTRY AND CHEMICAL ENGINEERING

*K.A.M. Creber, BSc, MSc (Western), PhD (Queen's) - Professor and Head of the Department
*M.J.B. Evans, BSc, PhD (Bristol), FCIC, CChem, FRSC (UK) - Professor Emeritus
*R.F. Mann, rmc, BSc, MSc, PhD (Queen's), FCIC, PEng. - Professor Emeritus
*J.C. Amphlett, BSc, PhD (Wales) - Professor
*P.J. Bates, BSc, (Queen's), MEng, PhD (McGill), PEng - Professor, Canada Research Chair, and Professor-in-Charge of the Chemical Engineering Programme
*L.G.I. Bennett, rmc, BEng (RMC), MSc, PhD (Toronto), PEng - Professor
*H.W. Bonin, BA, BSc (Montréal), BScA, M1Eng (École Polytechnique), PhD (Purdue), FCIC, FCNS, ing, PEng - Professor
*V.T. Bui, BScA, MScA, PhD (Laval), FCIC, PEng - Professor
*J.P. Laplante, BSc, MSc, PhD (Sherbrooke) - Professor
*B.J. Lewis, BSc, MEng, PhD (Toronto), PEng - Professor
*B.A. Peppley, BASc (Ottawa), BEd, MSc (Queen's), PhD (RMC) - Professor
*K.J. Reimer, BSc, MSc, PhD (Western Ontario), FCIC - Professor
*P.R. Roberge, BA, BSc, MChA, PhD (Sherbrooke), PEng - Professor
*W.T. Thompson, BASc, MASC, PhD, (Toronto), PEng - Professor
*G.M. Torrie, BSc, MSc, PhD (Toronto) - Professor
*R.D. Weir, CD, BSc (New Brunswick), DIC, PhD (London), FCIC, FEIC, FIUPAC, FRSC(UK), CChem (UK), PEng - Professor
*W.R. Cullen, MSc (Otago, NZ), PhD (Cambridge, UK) - Professor (Adjunct)
*D.E.G. Jones, BSc, PhD (Western) - Professor (Adjunct)
*W.S. Andrews, CD, rmc, BEng, MEng, PhD (RMC), PEng - Associate Professor
*B.A. Zeeb, BSc, PhD (Queen's) - Associate Professor
E.F. Dickson, BSc (Carleton), PhD (Western) - Associate Professor (Adjunct)
W.J. Lewis, CD, rmc, BEng, MEng (RMC), BEd, MEd (Queen's), MBA (Manitoba), PhD (Pacific Western) - Associate Professor (Adjunct)
*W.W. Mohn, BA (Colgate), PhD (Michigan State) - Associate Professor (Adjunct)
E.J. Waller, BSc, MscE, PhD - Associate Professor (Adjunct)
D. Wilkinson, BSc (Waterloo), PhD (Ottawa) - Associate Professor (Adjunct)
N. Cunningham, BEng (RMC), MSc, PhD (INRS) - Assistant Professor
G.L.P. Lord, BA, BSc, MSc, PhD (Montreal) - Assistant Professor
*J.Y.S.D. Pagé, CD, rmc, BEng, MEng, PEng (RMC). - Assistant Professor
C. Thurgood, BSc, MSc (Toronto), PhD (Queen's) - Assistant Professor
J. Wojtyk, BSc, PhD (Queen's) - Assistant Professor
C. Cole, rmc, BEng, MASC, PhD (RMC) - Assistant Professor (Adjunct)
K.M Jaansalu, CD, rmc, BEng (RMC), Meng (McGill), PhD (RMC) - Assistant Professor (Adjunct)
D. Kelly, BSc, PhD (Manchester) - Assistant Professor (Adjunct)
I. Koch, BSc (Waterloo), PhD (BC) - Assistant Professor (Adjunct)
C. Ollson, BSc (Queen's), MSc, PhD (RMC) - Assistant Professor (Adjunct)
- A. Rutter, BSc, MSc (Queen's), PhD (UOttawa) - Assistant Professor (Adjunct)

* Faculty members with complete privileges

DEPARTMENT OF CIVIL ENGINEERING

- *J.H.P. Quenneville, rmc, BEng (RMC), MEng (École Polytechnique), PhD (Queen's), PEng - Professor and Head of Department
- *J.A. Stewart, CD, BEng (RMC), MASc (Waterloo), PhD (Queen's), PEng - Dean of the Division of Engineering; Professor
- *G. Akhras, DiplIng (Aleppo), MSc, PhD (Laval), ing, FCSCE, FASCE, FEIC - Professor
- *R.J. Bathurst, BSc, MSc, PhD (Queen's), FEIC, FCAE PEng - Professor
- *M.-A. Erki, BASc, MASc, PhD (Toronto), FCSCE, FIIFC, FIABSE, PEng - Professor
- *R.P. Chapuis, DScA (École Polytechnique), PEng, FEIC - Professor (Adjunct)
- *D. Chenaf, DiplIng (Alger), MASc (Moncton), PhD (École Polytechnique), - Associate Professor
- *R.G. Wight, CD, rmc, BEng, MEng (RMC), PhD (Queen's) - Associate Professor
- *M.F. Green, BSc (Queen's), PhD (Cantab), PEng - Associate Professor (Adjunct)
- *C.W. Greer, BSc (Memorial), PhD (McGill) - Associate Professor (Adjunct)
- R. Tanovic, BSc, MSc, PhD (Zagreb), PEng - Associate Professor (Adjunct)
- J.A. Héroux, BEng (McGill), MIng (École Polytechnique), PEng - Assistant Professor
- *P. Lamarche, BASc, MASc (Ottawa), PhD (Waterloo), PEng - Assistant Professor
- *M. Tétreault, BIng, MASc (École Polytechnique), PhD (Queen's), PEng - Assistant Professor
- N. Vlachopoulos, CD, BEng, rmc, MEng (RMC), PhD Candidate (Queen's), PEng, Assistant Professor
- M.C.G., Lehoux, CD, BEng, MASc (RMC), Lecturer
- M.W. Rancourt, CD, Beng (RMC), MEng (UNB), Lecturer

DEPARTMENT OF ELECTRICAL AND COMPUTER ENGINEERING

- *D.E. Bouchard, CD, rmc, BEng, MEng (RMC), PhD (Waterloo), PEng - Head of Department and Associate Professor
- *P.E. Allard, BSc, BASc, MSc, PhD (Ottawa), FEIC, PEng - Professor Emeritus
- *Y.T. Chan, BSc, MSC(Queen’s), PhD(New Brunswick), PEng - Professor Emeritus
- *G.E. Séguin, BScA, MScA(Ottawa), PhD(Notre Dame) - Professor Emeritus
- J.D. Wilson, BSc(Edinburgh), PhD (London), PEng - Professor Emeritus
- *D. Al-Khalili, BSc (Baghdad), MSc, PhD (Manchester), PEng - Professor
- *Y.M.M. Antar, BSc (Alexandria), MSc, PhD (Manitoba) - Professor
- *B.J. Fugère, BSc (Montreal), MSc (Moncton), PhD (Hull) - Professor (cross appointed from Mathematics & Computer Science)
- *G. Labonté, BSc, MSC (Montreal), PhD (Alberta) - Professor (cross appointed from Mathematics & Computer Science)
- *R.F. Marsden, rmc, BSc (RMC), PhD (British Columbia) - Professor (cross appointed from Physics)
- *B. Mongeau, BScA, MScA, DScA, (École Polytechnique), PEng - Professor
- *P.L. Rochon, BSc, PhD (Ottawa), PEng - Professor (cross appointed from Physics)
- *C.N. Rozon, BSc, MSc, PhD (Sherbrooke), PhD (Queen's), PEng - Professor
- *C.D. Shepard, BSc, MA (Queen’s), PhD (Illinois), PEng - Professor
• G.A. Morin, BEng (Montréal), MASc, PhD (Toronto) - Professor (Adjunct)
• B.J. Plant, OMM, CD, ndc, PhD (MIT), FEIC, PEng - Professor (Adjunct)
• C.W. Trueman, BEng, MEng, PhD (McGill) - Professor (Adjunct)
• S. Amari, D.E.S. (Constantine), M.S., PhD (Washington) - Professor
• F. Chan, BEng (McGill), MScA (École Polytechnique), PhD (École Polytechnique) - Associate Professor
• G. Drolet, BEng, MScA, PhD (Laval), PEng - Associate Professor
• D.R. Mcgaughey, BSc (Alberta), MSc, PhD (Queen's), PEng - Associate Professor
• A. Noureldin, BSc, MSc(Cairo), PhD(Calgary) - Associate Professor
• M.H. Rahman, BSc (UE&T, Dacca), MSc, PhD (Queen's), PEng - Associate Professor
• M. Tarbouchi, BSc (Morocco), MSc, PhD (Laval), Ing - Associate Professor
• G.E. Simons, BMath (Waterloo), MSc (Toronto), PhD (Waterloo) - Associate Professor (cross appointed from Mathematics & Computer Science)
• M. Frendorfer, BASc, MSc, PhD (Toronto)- Associate Professor (Adjunct)
• M. Hefnawi, BSc(HassanII), MSc(Trois-Rivières), PhD(Laval) - Associate Professor
• K.C. Ho, BSc, PhD (Hong Kong) - Associate Professor (Adjunct)
• G.S. Knight, CD, rmc, BSc, MSc (RMC), PhD (Queen's), PEng - Associate Professor
• N. Chabini, MSc, PhD (Montreal) - Assistant Professor
• J.P.S. Leblanc, CD, cmr, plsc, BSc (CMR, St-Jean), MEng (RMC), PEng - Assistant Professor (cross appointed to the Department of Applied Military Science)
• Y. Liang, BSc, MSc, PhD(Leeds) - Assistant Professor (cross appointed from Mathematics and Computer Science)
• J. Morelli,rmc, BEng, MSc(Windsor), PhD(Saskatchewan) - Assistant Professor (Adjunct)
• F.A. Okou, BIng (Ivory Coast), MIng, PhD (E.T.S., Montreal) - Assistant Professor
• G. Phillips, CD, rmc, BEng, MEng (RMC), PhD (Queen's), PEng - Assistant Professor
• C.M. Wortley, CD, BEng, MEng (Nova Scotia Technical College), PEng - Assistant Professor
• T.R. Dean, BSc, MSc, (Saskatchewan), PhD (Queen's) - Assistant Professor (Adjunct)
• R. Inkol, BEng, MEng (Waterloo) - Assistant Professor (Adjunct)

* Faculty members with complete privileges

DEPARTMENT OF MECHANICAL ENGINEERING

• Col (Retired) J.G. Lindsay, OMM, CD, rmc, plsc, qtc, pcsc, Itsc, BEng (RMC) - Head of the Department of Mechanical Engineering and Programme Director of Continuing Studies Division (not member of Graduate Faculty)
• M.F. Bardon, rmc, BEng, MEng (RMC), PhD (Calgary), PEng - Dean of the Division of Continuing Studies - Professor Emeritus
• S.H. Benabdallah, BEng (Algeria), MScA, PhD (Toronto), PEng - Professor
• D.L. DuQuesnay, BASc, MSc, PhD (Waterloo), PEng - Professor
• G.Akhrs, DipIng (Aleppo), MSc, PhD (Laval), Ing - Professor (cross-appointed from Civil Engineering)
• W.E. Eder, Ing (Austria), MSc (Swansea), PEng - Professor (Adjunct)
• E.J. Fjarlie, BASc, MScA (British Columbia), PhD (Saskatchewan), PEng - Professor (Adjunct)
• J. Lemay, BASc, MSc, PhD (Laval), Ing - Professor (Adjunct)
• W. Allan, CD, rmc, BEng (RMC), MScA (UBC), DPhil (Oxon), PEng - Associate Professor
• A. Benaissa, BSc, MSc, (Algiers), PhD (Marseilles), PEng - Associate Professor
• I.E. Boros, Dipl Ing (Cluj), MScA, PhD (Toronto), PEng - Associate Professor
• P.J. Heffernan, CD, rmc, plsc, BEng, MSc, PhD (RMC), PEng - Associate Professor
• *A. Jnifene, BASc, MASc, PhD (Ottawa), PEng - Associate Professor
• *D.C.M. Poirel, CD, rmc, BEng (RMC), MEng, PhD (McGill), PEng - Associate Professor
• D.R. Hamilton, CD, rmc, BEng (RMC), BS, MSME (USNPGS), PhD (Queen's) - Associate Professor (adjunct)
• *R. Underhill, BSc (Trent), DPhil (York) - Associate Professor (Adjunct)
• *M. Arsenault, BScA, MScA (Moncton), PhD (Laval) - Assistant Professor
• *A. Asghar, BEng (Karachi), MSc (King Fahd), MSc, PhD (Notre Dame) - Assistant Professor
• *M. Jugroot, Lic ès Sci, Maîtrise/DEA, Doctorat (Toulouse) - Assistant Professor
• *M. LaViolette, BScA, PhD (Laval), PEng - Assistant Professor
• *K. Moglo, BScA (Trois-Rivières), MScA, PhD (Polytechnique) - Assistant Professor
• *X. Wu, BSc (USTC), PhD (Manitoba) - Assistant Professor

* Faculty members with complete privileges

DEPARTMENT OF APPLIED MILITARY SCIENCE

• Colonel B.G. Wilson, OMM, CD, rmc, plsc, qtc, pcsc, BEng (RMC) - Head of the Department
• J.D.Wilson, BSc(Edinburgh), PhD (London), PEng - Professor Emeritus (cross appointed from Electrical and Computer Engineering)
• Lieutenant-Colonel R. Bassarab, CD, rmc, plsc, qtc, pcsc, Itsc, BEng (RMC) - Directing Staff
• Lieutenant-Colonel D.V. David, CD, rmc, plsc, qtc, pcsc, Itsc, BSc(RMC), CGIA (Shrivenham) - Directing Staff
• Lieutenant-Colonel K.E. Lee, CD, rmc, plsc, pcsc, Itsc, BEng (RMC), MSc, PEng (Cranfield) - Directing Staff
• Lieutenant-Colonel M. Mauer, CD, plsc, pcsc, Itsc, BSc (Ottawa), MSc (Cranfield) - Directing Staff
• Lieutenant-Colonel (Ret'd) M.G. McKeown, MMM, CD, plsc, pcsc, qtc, Itsc, BSc (UBC) - Directing Staff
• *D.L. DuQuesnay, BASc (Waterloo), MASc (Waterloo), PhD (Waterloo), PEng - Professor (cross appointed from Mechanical Engineering)
• *P.L. Rochon, BSc (Ottawa), PEng - Professor (cross appointed from Physics)
• *S. Amari, D.E.S. (Constantine), M.S., PhD (Washington) - Associate Professor (cross appointed from Electrical and Computer Engineering)
• *W.S. Andrews, CD, rmc, BEng, MEng, PhD (RMC), PEng - Associate Professor (cross appointed from Chemistry and Chemical Engineering)
• *P.J. Bates, BSc, (Queen's), MEng, PhD (McGill), PEng - Professor, Canada Research Chair (cross appointed from Chemistry and Chemical Engineering)
• *W.J. Graham, BA (Dalhousie), LLB, MBA, PhD (Queen's) - Associate Professor (cross appointed from Business Administration)
• *P.J. Heffernan, rmc, plsc, BEng, MASc, PhD (RMC), PEng - Assistant Professor
• *G.S. Knight, CD, rmc, BSc, MSc (RMC), PhD (Queen's), PEng - Associate Professor (cross appointed from Electrical and Computer Engineering)
• J.P.S. Leblanc, CD, rmc, BSc (CMR, St-Jean), MEng (RMC), PEng - Assistant Professor (cross appointed from Electrical and Computer Engineering)
• *D.R. McGaughey, BSc (Alberta), MSc, PhD (Queen's), PEng - Associate Professor (cross appointed from Electrical and Computer Engineering)
• *G. Phillips, CD, rmc, BEng (RMC), PhD (Queens), PEng - Assistant Professor (cross appointed from Electrical and Computer Engineering)
• *P.A. Roman,CD, rmc, BEng(RMC), PhD (Queen's) - Assistant Professor (cross appointed from Business Administration)
• *M. Tétreault, BEng, MASc (Ecole Polytechnique), PhD (Queen's), PEng - Assistant
Professor (cross appointed from Civil Engineering)

* Faculty members with complete privileges

### DEPARTMENT OF DEFENCE STUDIES

- A. Chapnick, BA (Trent), MA (Carleton), PhD (Toronto) - Assistant Professor
- W. Dorn, BSc, MSc, PhD (Toronto) - Associate Professor
- B. Falk, BA (Victoria), MA (York), MSL (Toronto), PhD (York) - Associate Professor
- C. Madsen, BA (Simon Fraser), MA (Western Ontario), PhD (Victoria) - Associate Professor
- P.T. Mitchell, BA (Wilfred Laurier), MA (King’s College), PhD (Queen's) - Associate Professor
- P.C. Pahlavi, BA (Montreal), MA (Nice), MSc (Montreal), PhD (Montreal) - Assistant Professor
- C. Spearin, BASc (McMaster), MA (Carleton), PhD (UBC) - Assistant Professor
- J.C. Stone, BA (Manitoba), MA, PhD (RMC) - Assistant Professor

### LIBRARY STAFF

- S. Toomey, BA (McGill), MLS (McGill) - Chief Librarian

### 1.6 INTERDEPARTMENTAL COMMITTEES OF THE DIVISION

#### 1.6 INTERDEPARTMENTAL COMMITTEES OF THE DIVISION

The interdepartmental degree programmes in War Studies, Defence Engineering and Management, Security and Defence Management and Policy, and Defence Studies, are controlled directly by committees, rather than by individual departments of the Graduate Division.

### War Studies Committee

The War Studies Committee consists of Dr. D. Delaney as Chair, Dr. J. Boulden Associate Chair, and those teaching in the programme.

### Defence Engineering and Management Committee

The committee responsible for the programme in Defence Engineering and Management is composed of Dr. W.G. Phillips as Chair, LCol D Gosselin as Vice-Chair, and members Dr. P.J. Bates, Dr. D. DuQuesnay, Dr. P.A. Roman, Maj S. Leblanc, Dr. P. Rochon, and Dr. M. Tétrault.

### Security and Defence Management and Policy Committee

The Security and Defence Management and Policy committee is composed of Dr. P.J.S. Dunnett as Chair and Dr. D. Harries as executive Director. The Admissions Committee consists of Dr. D. Harries as Chair, Dr. P.J.S. Dunnett, and the MA(SDMP) programme coordinator.
The Defence Studies Committee consists of Dr. B. Simms as Co-chair, Dr B. Falk as Co-chair, LCol Last, Capt(N) I Paterson, and Dr J. Sokolsky, ex officio.

1.7 ETHICAL CONDUCT FOR RESEARCH

Research conducted by RMC staff and students must conform with the Tri-Council Policy Statement: Ethical Conduct for Research Involving Humans, as set by:

- the Canada Institute of Health Research (CIHR),
- the Natural Sciences and Engineering Research Council (NSERC), and

The required information and forms are available at:

http://www.rmc.ca/academic/gradrech/ethics/index_e.html

Programs Offered

2.1 MASTER'S DEGREE

The programmes of graduate studies at RMC are open to Officers and non-commissioned members of the Canadian Armed Forces, Regular and Reserves, and to civilians who are either Canadian citizens or permanent residents. All the graduate programmes are subjected to the appraisal process administered by the Ontario Council of Graduate Studies, Council of Ontario Universities.

This appraisal protocol involves assessment of each programme by several outside consultant experts at regular intervals. The RMC Senate has ruled, as a matter of policy, that programmes failing to meet the high external standards will not be offered. The Institutional philosophy of RMC is predicated on limiting the number of programmes and maintaining the standards to be among the best on the continent.

2.1 MASTER'S DEGREES OFFERED

The Royal Military College of Canada offers to commissioned officers of the Canadian Armed Forces and to civilian students, a graduate study programme leading to the following Master's
degrees:

Master of Arts
- Security and Defence Management and Policy
- War Studies

Master of Business Administration

Master of Defence Engineering and Management

Master of Defence Studies

Master of Science
- Chemical & Materials Science
- Computer Science
- Environmental Science
- Mathematics
- Nuclear Science
- Physics

Master of Engineering (Project) and Master of Applied Science (Thesis)
- Chemical & Materials Engineering
- Civil Engineering
- Computer Engineering
- Electrical Engineering
- Engineering Physics
- Environmental Engineering
- Mechanical Engineering
- Nuclear Engineering
- Software Engineering

2.2 DOCTORAL DEGREE

2.2 DOCTORAL DEGREES OFFERED

The Royal Military College of Canada offers to Commissioned Officers of the Canadian Armed Forces and civilian students, a graduate study programme leading to the following Doctoral degrees:

Doctor of Philosophy (Arts)
- War Studies

Doctor of Philosophy (Science)
- Chemical & Materials Science
- Environmental Science
- Mathematics and Computer Science
Programme Requirements

3.1 MASTER'S DEGREES

GENERAL INFORMATION

These General Regulations specify the minimum academic requirements in order to obtain a Master's or Doctoral degree with the Division of Graduate Studies and Research. The student's major department may have additional requirements.

3.1.1 Requirements - Masters Programme

Normally a period of two academic years, plus the intervening summer, of full-time graduate study is required for completion of a Master's degree programme.

The minimum RMC content required for the awarding of an RMC Master's degree is work equivalent to two full-time terms or (one academic year) of full-time graduate study under the RMC faculty.

3.1.2 Programme of Studies - Master's Programme

A minimum of four approved term courses or the equivalent at the graduate level, plus a thesis will be required for a Master's degree. A term course is defined as one consisting of three (one-hour) periods per week for one academic term. Work done at other universities will be accepted if recommended by the Graduate Studies Committee and approved by Faculty Council. Results of original research or contribution to knowledge will normally be presented in the form of a thesis. The minimum number of RMC courses is fifty percent of the required course loading excluding the thesis.

The normal requirement for an RMC Master's degree is 1) five term courses or the equivalent at the graduate level plus a thesis, 2) eight term courses or the equivalent at the graduate level plus a project, or 3) ten term courses or the equivalent at the graduate level. Please see
the various degree programmes by Department for degree requirements.

A candidate's major department is the department in which the thesis research is conducted. In the case of graduate degree programmes conducted by interdepartmental committees of the Division of Graduate Studies and Research rather than by departments, the interdepartmental committee and its chair will assume the responsibilities of the major department and departmental chair respectively.

The programme of studies and research recommended by the major department concerned must be approved each term by the Graduate Studies Committee.

3.1.3 Time Limit - Master's Programme

The period allowed from first registration into the Master's Programme to the final submission of the thesis normally shall be no more that five years. Requests for extension of the thesis will be considered on a case by case basis.

3.2 DOCTORAL DEGREES

3.2.1 Residence Requirements - Doctoral Programme

The minimum residence requirement for the Doctoral degree is four full-time terms or (two academic years), dated from the initial registration into the programme.

The minimum RMC content required for the awarding of a RMC PhD degree is work equivalent to four academic terms or two academic years of full-time graduate study in a PhD programme at RMC.

In the case of candidates who are full-time members of the RMC faculty while undertaking a PhD programme on a part-time basis in their own time, one-half of an academic year of residence requirement will be credited for each year on staff during the period in which the candidate is registered in a PhD programme. For the purpose of this regulation, the academic year is considered to extend from 1 September to 30 April.

A Master's student, who is allowed to transfer into a PhD programme, must fulfil two academic years of full-time study, but dated from the initial registration in the Master's programme.

3.2.2 Programme of Studies - Doctoral Programme

The candidate will be required to take sufficient courses to provide proper preparation for the comprehensive examination. Normally, a minimum of eight approved term courses or the equivalent at the graduate level past the Bachelor's level will be required or a minimum of four approved courses past the Master's level. At least half of the required courses must be RMC courses. Major departments may have additional course work requirements.

A candidate's major department is the department in which the thesis research is conducted. In the case of graduate degree programmes conducted by interdepartmental committees of the Division of Graduate Studies and Research rather than by departments, the interdepartmental committee and its chair will assume the responsibilities of the major department and departmental chair respectively. Graduate level courses previously completed at RMC or another university, including courses credited toward the granting of a Master's
degree, will be accepted for credit up to a maximum of four term courses or equivalent, if recommended by the major department and Graduate Studies Committee and approved by Faculty Council. Credit for additional graduate courses may be considered on petition by the candidate.

Credit for additional graduate courses may be considered on petition by the candidate.

3.2.3 Time Limit - Doctoral Programme

The period allowed from first registration into the Doctoral Programme to the final submission of the thesis normally shall be no more than seven years. Requests for extension of the thesis will be considered on a case by case basis.

3.2.4 Language Requirements - Doctoral Programme

Individual departments may require demonstration of reading knowledge in one or more languages considered a requirement for the conduct of effective research in the particular topic of study.

3.3 ACADEMIC AND MILITARY RESPONSIBILITIES

The Dean of Graduate Studies and Research is responsible to the Principal for the control and direction of all academic matters affecting graduate studies. In academic matters, the graduate student is responsible directly to the Head of his or her major department (or, in the case of a programme controlled by an interdepartmental committee of the Division of Graduate Studies and Research, to its Chair), and thence to the Dean of Graduate Studies and Research.

For military purposes, command of all officers posted to RMC on postgraduate education is vested in the Commanding Officer for Post Graduates (COPG) who is specifically appointed by the Commandant.

Full-time graduate students may be required to perform laboratory assistance or tutorial, but not marking, duties for up to three hours a week, and minor military duties from time to time.

A civilian and a military Postgraduate Class Senior will be appointed annually. The civilian Class Senior will be chosen by the civilian graduate students in consultation with the Dean of Graduate Studies and Research, the military Class Senior by the COPG in consultation with the Dean of Graduate Studies and Research. The military Class Senior shall be responsible to the COPG for the general control and deportment of the military graduate students, and shall also provide liaison between the military graduate students and the COPG and the Dean of Graduate Studies and Research. The two Seniors will sit on the Graduate Studies Committee.

Admissions

4.1 APPLICATION FOR ADMISSION
4.1 APPLICATION FOR ADMISSION

Candidates seeking admission to the Royal Military College as graduate students should contact the Graduate Studies and Research Division, requesting an admission form and instructions on how to apply.

The application form and corresponding instructions can be found at:

http://www.rmc.ca/academic/grad/forms_e.html

4.2 GENERAL ADMISSION REQUIREMENTS

4.2.1 Master's Programme

Decisions on academic admissibility are made on the recommendation of the major department and of the Dean of Graduate Studies and Research, and with the approval of the Faculty Council.

For direct admission as a Master's "Regular" Graduate Student to courses of study in Arts or Science, an applicant must hold an honours degree from a recognised university with at least "Second Class" standing (70 percent) in the field in which graduate studies and research are to be pursued.

For direct admission as a Master's "Regular" Graduate Student to courses of study in Engineering, the applicant must hold a degree from a recognised university with at least "Second Class" standing (70 percent) in the appropriate field of Engineering or Applied Science.

Some departments impose additional requirements and even though the applicant may appear to satisfy the general admission requirements, acceptance into a graduate degree programme is not guaranteed. Please see the various admission requirements by programme.

4.2.2 Doctoral Programme

The normal admission requirements for a PhD student shall be a Master's degree by thesis or
its equivalent by thesis, in a field closely related to the proposed field of study.

4.2.2.1 Direct Admission to Doctoral Programme from Masters Programme

Students registered in a Master's degree programme with first class standing (at least 80%) in the programme, and who display exceptional performance and promise in their research may, after at least a full calendar year of full-time enrolment, with the approval of their sponsor, apply to be admitted to a full-time PhD programme without having to complete the requirements for the Master's degree.

Such admission to a doctoral programme requires the successful completion of a transfer examination, the recommendation of the appropriate department or programme, the approval of the Graduate Studies Committee and its Dean as well as Faculty Council.

4.3 ACCEPTANCE

The acceptance of an applicant is recommended by the Department to the Graduate Studies and Research Division.

Official letters of acceptance are sent by the Dean of Graduate Studies and Research Division, and are only valid for the academic year indicated in them. A successful applicant must reply at an early date, declining or accepting the offer.

If the applicant wishes to commence study in the term other than the one offered or in a subsequent academic year, a deferral request can be made to the Dean of Graduate Studies and Research for consideration.

Academic Regulations

5.1 STUDENT CATEGORIES

5.1.1 Degree Student

A degree student is one who is registered in a graduate degree programme with the Division of Graduate Studies and Research and who is actively working towards their degree, on a
parttime or full-time basis.

5.1.2 Visiting Student

i) RMC - Queen's Graduate Student Agreement

Students from either university are permitted to take courses at the graduate level at the host university for degree credit at their home university. Courses may not be audited. Fees are paid at the home university.

ii) Ontario Visiting Graduate Student Plan (OVGS)

This plan allows a graduate student of an Ontario University (Home University) to take graduate courses at another Ontario University (Host University) while remaining registered at his/her own university. The plan allows the student to bypass the usual application for admission procedures and resultant transfer of credit difficulties. The student pays fees to his/her Home University and is classed as a "visiting graduate student" at the Host University where he/she pays no fees. The student must make application for study under this Plan by completing a Visiting Graduate Student Application form available at their Home University departmental offices. Students may not take courses under this Plan which are audit courses or which are not to be credited towards their degree programme.

iii) Visiting Students Outside Ontario

Students visiting RMC from universities outside Ontario, or RMC Students visiting a university outside Ontario are permitted to take graduate level courses at the host university for degree credit at their home university provided they have a Letter of Permission from their home university. Courses may not be audited. Fees are paid at the host university.

5.1.3 Interest Student

A graduate or equivalent student who is not enrolled in a graduate degree programme at RMC may take one or two term courses or one full-year course, for a total of two credits as an interest student. The interest student is required to apply for admission and will pay the tuition according to the department that teaches the course.

5.2 Study Status

A graduate student may be accepted into a programme either as a Regular, Provisional or Probationary student, working either on a part-time or full-time basis.

5.2.1 Regular

A Regular graduate student is a student who aspires to a Master's or PhD degree and has given evidence of capacity for graduate work acceptable to the Major Department, to the Dean of Graduate Studies and Research and to the Faculty Council.
5.2.2 Probationary Student

A graduate student may be accepted to the graduate school on a probationary basis, subject to demonstration of a suitable level of academic work during the initial period of graduate study. Probationary status may be assigned if the student has been admitted with an academic record which is below the normal requirements for graduate school admission, or if the undergraduate degree was in a field different from the graduate programme. Students admitted on probationary status are not required to complete extra makeup work as part of their degree requirements. However they must achieve a satisfactory level of academic performance (normally a grade of not less than B standing on all courses taken during the probationary period) in order to be retained in the programme and to be removed from probationary status. The Graduate Studies Committee will review the academic record of probationary full-time students at the end of two terms of study and make recommendations to Faculty Council regarding retention or removal from the programme. For part-time students, the status will be reviewed at a corresponding later date, once a sufficient number of courses have been completed to assess academic performance.

5.2.3 Provisional Student

A graduate student may be admitted to a graduate program on a provisional basis when completion of the graduate degree is dependent on successful completion of additional graduate or undergraduate courses beyond the usual degree requirement. Provisional status will normally be awarded when a student is admitted into a graduate program without having competed an Honours or equivalent degree or when the undergraduate academic background is otherwise inadequate. The required additional courses may be specified in the letter of admission, or directed by the program chair or departmental head. Additional courses should be taken in the early part of the study program if the course of study permits. The additional work required will be reviewed in light of a student's evident body of knowledge based on performance in the program. The Program Chair will review provisional status in consultation with the appropriate Deans. On the recommendation of a Dean, Graduate Studies Committee may remove provisional status when admission provisions are deemed to have been met.

5.2.4 Part-time

A part-time student is a student accepted by the Dean of Graduate Studies and Research into a graduate programme as a Regular, Probationary or Provisional student, who takes a minimum of one course (either a one-credit course or a two-credit course) for the academic year in either the Fall, Winter or Summer term and a maximum of two courses (either a one-credit course or a two-credit course) in any given term (either Fall, Winter or Summer) of the academic year.

Students accepted as part-time may request a change to their enrolment status by writing to the Dean of Graduate Studies. Normally a change in enrolment status can be made only once during the duration of the programme.

Please note that part-time PhD students are required to pay full-time fees for two academic years or for four terms.

5.2.5 Full-time

A full-time student is a student who is accepted by the Dean of Graduate Studies and Research into a graduate programme as a Regular, Probationary or Provisional student. The full-time status is not entirely determined by the number of courses taken in a given term.
Full-time PhD students are required to pay full-time fees for two academic years or for four terms.

5.2.6 Inactive Status

An inactive student is one who either is given permission for a deferral in commencement of studies, or for a leave of absence for duty or illness, or else fails to register in two consecutive terms (not including summer). Those in the latter category who fail to register in two consecutive terms (not including summer) will be withdrawn and must reapply to the graduate school.

5.2.7 Leave Of Absence

A graduate student enrolled in a graduate programme may request to take a leave of absence (LOA) from their programme of study for operational commitments or personal reasons. The request should be made to the student's Department Head or Programme Chair and approved by the Dean of Graduate Studies. Students would be placed in an "inactive" status without prejudice to their academic standing. The LOA would not count towards the time limit (3.1.3, 3.2.3) of the student's programme until such time studies have resumed. Normally the period of inactive status due to LOA will be one year, but can be extended upon written request.

5.2.8 Deferral

A graduate student who has not yet commenced their graduate programme may request to commence study in the term other than the one offered or in a subsequent academic year. A deferral request can be made to the Dean of Graduate Studies and Research for consideration.

5.3 Registration

All graduate students will register every term. Each graduate student is responsible for ensuring his or her own registration in each term. Deadline dates can be found on the Calendar of Dates at:

www.rmc.ca/academic/grad/dates_e.html

Registration forms can be found at:

www.rmc.ca/academic/grad/forms_e.html

5.4 Course Coding

Courses offered by the graduate departments will either be two-term courses (two terms in length, worth 2 credits) or one-term courses (one term in length, worth 1 credit). Normally the term course consists of three one-hour periods per week for one term (13 weeks) while the two-term course consists of three one-hour periods per week for two terms (26 weeks).
Example:

• EE509 (electrical engineering, master's level)
• MBA539 (MBA, master's level)

Course codes at the graduate level normally consist of either two or three letters followed by three digits. The letters describe either the department or programme. The first digit describes the level of the course. Master's level and PhD level courses are normally in the (500) five hundred series. Doctoral level courses in the War Studies Programme are in the (600) series.

5.5 COURSE WITHDRAWAL DATES

5.5 COURSE WITHDRAWAL DATES

Students who withdraw from a course before the 4th week of course start date will be unregistered in the course.

Courses dropped after the 4th week of course start date will result in forfeiture of tuition fees.

Withdrawals between the 4th and 7th week of course start date will be reflected as "Withdrawn" on the transcript, whereas after this period a mark will be assigned.

Normally a student will not be permitted to withdraw from a course after the 7th week of term course start date.

Students are reminded that changes to the academic programme (adding or dropping courses) must be completed by the registration change deadline by submitting an Academic Change Form to the Registrar's Office or the Office of Continuing Studies as appropriate. Neither notifying the instructor nor discontinuing class attendance will suffice.

The responsibility for initiating course changes or withdrawal rests solely with the student.

5.6 WITHDRAWAL FROM A DEGREE PROGRAMME

5.6 WITHDRAWAL FROM A DEGREE PROGRAMME

Students who wish to withdraw from the University must submit a request in writing to the Dean of Graduate Studies and Research. Voluntary programme withdrawals after the 4th week of term normally result in forfeiture of tuition fees. Departments have the right to ask students to withdraw from the programme if progress is not satisfactory or if they have failed a course required for their programme.

5.7 INCOMPLETE COURSES

5.7 INCOMPLETE COURSES

Students are expected to complete all required course work prior to the last day of the term in which the course is offered.
Under exceptional circumstances, professors may agree to accept work after this date. In this case, until a final course mark is submitted the professor will submit a mark of "IN" with a numeric mark of work completed to date.

A course record may be incomplete for a maximum period of one term. After this time, a mark will be assigned based on the course work completed.

This one-term maximum may be extended when failure to complete course requirements is clearly due to exceptional operational requirements (i.e. not simply workload demands). However, when it is unlikely that a student will be able to complete a course due to these reasons, the student is encouraged to withdraw without academic penalty.

5.8 **REQUIRED COURSES VS EXTRA COURSES**

A "Required Course" is defined as a course required for the degree sought. This definition is intended to include all courses required for the degree, no matter whether in fields considered major or minor to the degree sought, and no matter whether graduate or undergraduate.

An "Extra Course" is a course that is not required for the degree sought. The decision as to whether each course taken is "Required" or "Extra" is made by the student's major department at the time of registration, but may be changed at a later date on the recommendation of the Graduate Studies Committee and approval by Faculty Council.

5.9 **COURSE AUDITING**

Students may audit only one RMC course per term with the approval of the department and the course instructor. Audit students will not submit assignments or write exams for academic evaluation but must attend classes. Audited courses will appear on transcripts with the remark "Audit" and the grade code "AU". Part-time students who wish to audit a course will be charged one-half the current course tuition fee according to programme of enrolment. Students who pay the full-time fee will not be assessed any additional tuition fees. Visiting students cannot audit courses.

5.10 **TRANSCRIPT NOTATIONS**

In addition to numeric and letter grades, the Division of Graduate Studies and Research of the Royal Military College of Canada uses the following entries to reflect course status:

<table>
<thead>
<tr>
<th>Transcript Notation</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>AC</td>
<td>Accepted (refers to thesis or project)</td>
</tr>
<tr>
<td>AU</td>
<td>Audit</td>
</tr>
<tr>
<td>CG</td>
<td>Credit Granted</td>
</tr>
</tbody>
</table>

### 5.11 Grading Scheme

A graduate degree student must achieve a B- (70%) or higher in each "Required Course" in the student's graduate programme. A "Required Course" is considered failed if a lesser mark is obtained.

<table>
<thead>
<tr>
<th>Letter Grade</th>
<th>Percentage Grade Relationship</th>
</tr>
</thead>

*Failure in a RMC graduate level "required course"

### 5.12 Course Results

The Graduate Studies Committee will review the progress of graduate students at regular intervals. The Committee will recommend students who fail to maintain satisfactory levels of performance to Faculty Council for withdrawal from their respective programmes of graduate studies. Courses recorded on the student's summary or transcripts are assumed to be "Required Courses". The Registrar's office should be advised if a student wishes to take "Extra Courses" which are not counted towards their degree, in order to annotate this on the transcript or summary. Extra courses are graded on the pass standard applied to
undergraduate courses, as are undergraduate courses taken by those students who are required to undertake one or more terms of probationary, undergraduate work prerequisite to their admission to graduate study. No grades, whether numerical or letter, will be assigned to a thesis or "most projects credited toward graduate degrees. An accepted thesis or project will be recorded in the transcript only as "AC" for "Accepted". For some programmes a mark will be recorded for the project.

5.12.1 RMC Course Results

Results for individual courses taken at RMC will be recorded on the student's transcript as letter grades.

5.13 Submission Of Results

The results of all academic work undertaken at RMC by graduate students, including both course work grades and thesis acceptance, will be reported by the instructor directly to the Registrar, with a copy to the Dean Graduate Studies and to the Head of the student’s major department for information purposes. The results of authorised academic work undertaken at other universities for credit toward an RMC degree by students enrolled in graduate degree programmes at RMC will be reported to the Registrar by interuniversity Visiting Graduate Student procedures. The Registrar presents marks and the results of thesis examinations to the Graduate Studies Committee. Results approved by the Committee are submitted to Faculty Council for official approval. Past results for the consideration of the Graduate Studies Committee at its Fall Term meeting must be submitted to the Registrar by the first working day in September. For the Winter Term meeting, the results must be submitted by the first working day in January. The Graduate Studies Committee will consider the standing of graduating students at its spring meeting; for this meeting, results must be submitted to the Registrar in accordance with the announced schedule for undergraduate results.

5.14 Supplemental Exams

In the case of a student who has failed (i.e., achieved less than a B- in a required course, the department may petition Faculty Council through the Dean of Graduate Studies and Research for permission to assign a supplemental examination in the failed required course. Normally a total of only one supplemental examination will be permitted in each student's entire programme of required courses for a graduate degree. If this supplemental examination is failed (i.e., achievement of less than Second Class standing), the student will be required to withdraw from the graduate programme in which he or she is then registered. A supplemental examination may not be written until at least one month after the date of the final examination in the course failed, and in no event before the date of the official notification of permission to write a supplemental. The supplemental examination must be written within four months of the date of official notification to the student of permission to write a supplemental.

5.15 Transfer Credit

Credit may be granted for university courses taken prior to enrolment into a RMC programme,
if they have been assessed as duplicating RMC courses, provided that marks of B- or higher have been earned and an overall satisfactory academic record has been maintained. Students can make their request in writing to their Department Head or Chair of their Programme. The request will then be sent to the Dean of Graduate Studies for final approval. The marks summary and transcript will annotate these credits as "Transfer Credit" and will include the mark provided by the university attended.

5.16 CREDIT GRANTED

Credit may be granted for military courses or experience gained if the course or experience gained has been assessed as duplicating a RMC course. Students can make their request in writing to their Department Head or Chair of their Programme. The request will then be sent to the Dean of Graduate Studies for final approval. If approved, the marks summary and transcript will annotate these credits as "Credit Granted" and will include "CG" for credit, for the RMC course which the Department or Programme Chair deems appropriate.

5.17 ACADEMIC MISCONDUCT

5.17.1

Plagiarism is the presentation or submission of work as one's own, which originates from some other, unacknowledged source. In term papers, assignments and examinations, the verbatim or almost verbatim presentation of someone else's work without attribution constitutes an example of plagiarism.

5.17.2

Cheating is the act or attempt to give, receive, share or utilise unauthorised information or assistance before or during a test or examination. The presentation of a single work to more than one course without the permission of the instructors involved; the improper acquisition through theft, bribery, collusion or otherwise of an examination paper prior to the examination; the impersonation of a candidate at an examination: all constitute examples of cheating.

5.17.3

Penalties are imposed upon students found guilty of cheating or plagiarism. Academic sanctions for such misconduct may range from the award of a zero grade for the work involved, to a recommendation for expulsion from the College.

5.18 APPEALS, RE-READS AND PETITIONS

A student with a complaint or grievance that is academic in nature should communicate that concern to the instructor, Head of Department and/or Dean of the division involved. If the
matter remains unresolved in this informal process, a formal petition to the Faculty Council can be initiated.

If the complaint or grievance pertains to the marks awarded on a final exam, the student may make a formal request to have the exam re-evaluated. This request is to be made in writing to the Registrar. The Registrar will forward the request for re-read to the Head of the appropriate department, who will decide how the re-read will be conducted. The result of the final exam re-read will be used to determine the student's final course grade. To ensure that such matters are addressed with due diligence, a request for re-read must normally be submitted not later that 30 days after the student has been made aware of the result. Requests for re-reads will address only one exam, and normally will not be entertained for assignments, tests, or an other work that has been removed from the custody of the instructor after being marked and recorded.

Formal petitions to the Faculty Council must be made in writing and be submitted through the Registrar for consideration by the Council. Normally, petitions will be heard only if submitted within 90 days of the event or academic decision, giving rise to the appeal. For more specific information and other principles governing student appeals, the Registrar, as Secretary to the Faculty Council, should be consulted.

**Thesis Regulations**

**6.1 Thesis Registration**

A student who is actively working on their thesis, must have completed a registration form and registered for either TH500 for the Master's Thesis or TH600 for the Doctoral Thesis or Dissertation. Once students are registered in their thesis, both full-time and part-time students are required to re-register on a continuous basis for three terms (Fall, Winter, Summer) per academic year until completed (includes corrections), with an overall minimum thesis registration of not less than two terms.

**6.2 Thesis Supervision**

**6.2.1 Master's Level Thesis**

The student's research programme shall be under the direction of a thesis supervisor. The thesis supervisor shall be appointed as early in the student's programme of studies as possible, consistent with the readiness of the student to elect the desired research topic and supervisor. Normally this is done by the end of the first year of full-time study in the Master's Programme.

**6.2.2 Doctoral Level Thesis/ Dissertation**

The student's research programme shall be under the direction of a thesis supervisor. At the doctoral level, an advisory committee shall also be appointed, consisting of the supervisor as chair and normally two other members, which will periodically review the progress of the
research. The thesis supervisor and at least one other member of the advisory committee shall be full-time members of the student's major department and of the Graduate Faculty. The appointments shall be approved by the Dean of Graduate Studies and Research on the recommendation of the head of the major department. The thesis supervisor shall be appointed as early in the student's programme of studies as possible, consistent with the readiness of the student to elect the desired research topic and supervisor. Normally this is done by the end of the first year of full-time study in the Doctoral Programme. The remainder of the committee will be appointed either at the same time or as soon after as possible.

6.3 Doctoral Thesis Requirement

A doctoral thesis is required for the PhD programme and must embody the results of original investigation conducted by the student on the approved topic of research, and must constitute a significant contribution to the furthering of existing knowledge in the field.

6.4 Doctoral Thesis/Dissertation Comprehensive Examination

The doctoral student will be required to pass a comprehensive examination, which may contain a number of both written and oral components. This examination is for the purpose of assessing a student's academic appreciation of the field of study and scholarly qualifications for the degree. The results of this examination determine whether or not the student will be permitted to continue in the programme. It is normally held after all coursework requirements are completed at the end of first year, and must be held at least one calendar year before the submission of the thesis.

The student must register in CP600 Comprehensive Examination until its completion and pay appropriate tuition fees while studying to prepare for the examination.

The major department conducts the examination. The examining committee shall be chaired by the head of the major department or delegate, and will normally consist of the student's supervisor, and other members of the major department as appointed by the examining committee chair. The method adopted for examination and the major department subject to approval by the Graduate Studies Committee and Faculty Council shall specify evaluation and the areas to be examined.

The examining committee shall determine the result of the examination. If the result is not favourable, the examining committee may recommend to Faculty Council through the Graduate Studies Committee either that the examining committee reconvene at a later date to re-examine the student, or that the student be required to withdraw. Re-examination, if authorised, shall not take place before the elapse of at least three months, but no later than twelve months, from the date of the first examination. If the result is favourable the major department advises the Registrar and credit for the comprehensive examination is entered on the student's transcript.
6.5 DOCTORAL THESIS/DISSERTATION PROPOSAL

The Doctoral student, under the supervision of his or her supervisor, will present a thesis research proposal to the advisory committee for approval, upon satisfactory completion of the comprehensive examination.

6.6 EXAMINATION OF THE THESIS - MASTER'S AND PHD

The student shall submit the thesis to his thesis supervisor not less than six weeks prior to the date of defence. The student shall then defend the thesis at a final examination, which will be conducted by the Division of Graduate Studies and Research that will consist of an oral presentation by the student and an oral examination by the Examining Committee. The scope of the examination shall be limited to the subject and contents of the thesis, and subjects related to them. A written assessment from an external examiner will be required. The chair of the Examining Committee will be appointed by the Dean of Graduate Studies and Research in consultation with the Head of Department of the student. The Examining Committee shall be appointed by the Head of Department or delegate and shall consist of at least four voting members including among them the student's supervisor(s), the examiner external to the university, one member of the RMC Graduate Faculty from outside the student's major department or field, and one member from the student's department. The public will normally be permitted to attend the oral presentation, where questions may be asked of the student, and the oral examination at the discretion of the Chair, where only the Examining Committee is allowed to ask questions. Security considerations for the research may require the final examination to be open only to the Examining Committee.

6.7 ACCEPTANCE OF THE THESIS

Once a thesis has been accepted, no major revisions or additional work relating to the thesis can be required of the student. Should major revisions or additions to the thesis be required, it shall remain unaccepted until these are completed.

A rejected thesis may be submitted once for reexamination, but not before the elapse of at least three months from the time of its rejection.

6.8 SUBMISSION OF THESIS RESULTS

The thesis acceptance will be reported by the Chair of the Thesis Examining Committee to the Dean of Graduate Studies and Research with a copy to the Registrar. No grade, whether numerical or letter, will be assigned to a thesis credited toward a graduate degree. An accepted thesis will be recorded on the transcript as "AC" for accepted for courses TH500 or
6.9 REPRODUCTION OF THE THESIS

6.9.1 Procedure for Thesis Approval and Deposit

Following acceptance of the thesis, with all the corrections and modifications complete, and prior to the Convocation at which the degree is to be granted, the student will submit to the supervisor the final, unbound manuscript, complete with all tables, figures, illustrations, and attachments. At the same time, the student will also submit to the supervisor(s):

- one copy of the signed Non-exclusive License to Reproduce Theses form also available at:
  http://www.collectionscanada.ca/thesescanada/s4-270-e.html

- one copy of the thesis binding checklist available at:
  http://www.rmc.ca/academic/library/thesisform_e.html

- one copy of the UMI subject codes form available at:
  http://www.collectionscanada.ca/obj/s4/f2/s4-300.1-e.pdf

These forms are available from the departmental secretaries and the Library.

6.9.2 Number of Copies of Thesis

The major department of the candidate will arrange for reproduction of the thesis, and will provide the Science/Engineering Library with the original and five (six if there is a sponsor) complete copies, ready for binding.

6.9.3 Non-exclusive License to Publish

As mentioned in section 6.9.1, the candidate must complete the "Non-exclusive License to Reproduce Theses form". The College Library will arrange for submission of the thesis to the National Library of Canada.

6.9.4 Binding

As mentioned in section 6.9.2, it is the Science/Engineering Library that makes the arrangements for binding the original and a specific number of copies of the thesis. A checklist and instructions are provided on the web at http://www.rmc.ca/academic/library/thesisform_e.html. Theses are sent out for binding in April and October of each year, and normally must be received 6-8 weeks before convocation (departmental secretaries are informed of the exact date) in order to be processed in time. Otherwise the thesis will be sent in the next shipment. If the candidate and/or the supervisor(s) want additional bound copies, they are the ones who have to make the proper arrangements, and assume the costs themselves, for duplicating and
binding these additional copies.

6.9.5 Distribution of Thesis Copies

The College library will retain the original and one copy. It will send one copy to Director, Research and Development Knowledge and Information Management (DRDKIM), and three (four if there is a sponsor) copies back to the major department. The major department will retain one copy, send one to the sponsor (if there is one), one to the principal supervisor and one to the author. The distribution of any additional copies of the thesis will be the responsibility of the candidate and his or her supervisor(s).

6.9.6 Copyright

The title page of the thesis will include the following statement at the foot of the page: "This thesis may be used within the Department of National Defence but copyright for open publication remains the property of the author". It is important here to note that citation of copyrighted material from other authors, as well as the publication of proprietary material or data, must not appear in the thesis without proper reference and permission from the authors or companies involved.

6.9.7 Confidentiality Status

In general, the thesis is open to the public domain. However, there are cases where the whole thesis, or parts of it, includes protected information. These documents must be fully identified with appropriate warning messages, according to the procedures used in the Department of National Defence for protected and classified documents. If no such warning messages are displayed, the thesis is then considered as unclassified. More information can be found at:

http://www.rmc.ca/academic/grad/thesprep/procedures_e.html

6.10 CONVOCATION

6.10 Convocation

A graduate student wishing to be considered as a candidate for receiving a Master's degree or a Doctoral degree involving a thesis at a particular Convocation will so inform the Head of the major department in writing no later than eight full weeks before the date on which the Convocation is scheduled to be held. An "Application to Graduate" form should be completed and sent to the Registrar's office. At this time the department head, on advice of the student's supervisor that the thesis will be ready for examination, will so inform the Dean of Graduate Studies and Research.

The student will submit to his or her supervisor, no later than six full weeks before the scheduled date of the thesis defence, copies of the thesis, each complete but unbound, suitable for examination purposes.

For each Graduate Degree student, the Graduate Studies Committee shall adjudicate whether or not the requirements for the degree have been met, and will report its recommendation to Faculty Council.

6.11 Publication of Results of Research
6.11 Publication of Results of Research

Publication of results of research is encouraged. Agreement on publication must be reached between supervisor and graduate student prior to publication. Officers are reminded that the provisions of Queen’s Regulations and Orders for the Canadian Forces, Articles 19.36 and 19.37, govern publication of theses and journal articles.

Fees

7.1 Tuition Fees

Notice

The Royal Military College reserves the right to make changes, without notice, in the published scale of fees. If fee changes are approved after publication deadlines, every effort will be made to notify students affected. However, lack of notification does not exempt a student from paying the appropriate fee. Fee increases if applicable become effective in the Fall term of each year.

The following graduate students are not required to pay tuition fees since the agency posting them to RMC funds the studies:

- Officers of the Canadian Forces Regular who are sponsored or unsponsored and who are posted to graduate studies at RMC, and
- civilian employees of the Department of National Defence or of other government departments who are posted to graduate studies at RMC.

The following graduate students are required to pay tuition and Recreation Club fees, if applicable, at the same rates as those prescribed in CFAO 9-33 Annex D updated by the Departmental Administrative Orders and Directives:

- Officers of the Canadian Forces Regular who are not posted to graduate studies;
- Officers of the Primary Reserves, Supplementary Reserves, Cadet Instructional Cadre;
- Civilian employees of the Department of National Defence and other government departments who are not posted to graduate study;
- all other approved civilians.

The full-time fee schedule can be viewed at:

http://www.rmc.ca/academic/registrar/allfees_e.html#full

Masters students admitted on Full-time status will pay full-time fees according to their programme. Upon completion of course work, they will be charged the appropriate per course fee for project/thesis registration (every term until completion).

Doctoral students are required to pay full-time fees for two years (or four terms), after which they will be charged the appropriate per course fee for comprehensive exams/thesis
registration (every term until completion).

The part-time fee schedule can be viewed at:

http://www.rmc.ca/academic/registrar/allfees_e.html#part

THESIS, COMPREHENSIVE EXAMS and PROJECT Students:

Only students who have received formal approval from the Dean of Graduate Studies and Research to transfer to "inactive status" by way of a Leave of Absence (section 5.2.6) would be exempt from continuous registration and associated thesis fees. Otherwise students must register every term until comprehensive exams, thesis, and projects are completed (including corrections) and formally accepted. When a student would otherwise be financially penalized through no fault on his or her part, the Dean of Graduate Studies may authorize suspense of payments for one term.

7.2 METHODS OF PAYMENT

Tuition fees can be paid by credit card, (Mastercard or VISA), debit card, cheque, money order or cash. Cheques or money orders must be payable to: Receiver General for Canada.

Notes

1: AMEX is not accepted as a method of payment

2: Processing of cheques may take 3 to 6 weeks

7.3 DUE DATES FOR PAYMENT OF FEES

For students paying full-time fees, term payments are due the thirtieth day of September (fall term), the thirty-first day of January (winter term) and the thirty-first of May (summer term, if applicable).

Tuition fees (per course) are due at time of registration. Registrations will not be processed without payment.

7.4 INCOME TAX RECEIPTS

Income tax receipts will be mailed in February for the previous calendar year. The amount deemed eligible is a deduction for provincial tax purposes and a tax credit according to federal tax regulations. Income tax receipts will not be issued for unpaid balances due to RMC.
7.5 POLICY ON DEBTORS

Any student with an overdue debt with RMC will not be permitted to register until the outstanding amount is paid in full. A student with a debt cannot obtain an official transcript, marks, or diploma.

7.6 ADMINISTRATION FEE FOR WITHDRAWALS

Courses dropped after the 28th day of the course start date will result in forfeiture of tuition fees. Courses dropped prior to the 28th day from the course start date will be reimbursed less an administration fee.

7.7 LATE PAYMENT FEE

A student who has made a payment past the due date as outlined in section 7.3, shall be charged a late payment fee.

7.8 NSF CHEQUES / CREDIT CARD

Should a cheque be returned from the bank for non-sufficient funds or a credit card payment be refused for any reason, a service charge will be applied.

Research Grants & Contracts

RESEARCH GRANTS & CONTRACTS

The Dean of Graduate Studies and Research is responsible to the Principal for administration of research grants and contracts awarded to members of the RMC Faculty by organisations external to the University. Specifically included are the Academic Research Programme (ARP) awards and research contracts issued by agencies of the Department of National Defence and other departments of Government.

SCHOLARSHIPS AND BUSARIES
Scholarships & Bursaries

9.1 THE GOVERNOR GENERAL'S GOLD MEDAL

The Governor General’s Gold Medal is awarded annually to the graduate student who achieves the highest academic standing in a Master’s degree programme.

9.2 MILTON FOWLER GREGG VC MEMORIAL TRUST FUND BURSARY

A bursary in memory of Brigadier, The Honourable M.F. Gregg, VC, is offered annually to those students entering the Royal Military College Division of Graduate Studies and Research whose programmes will include environmental studies or international affairs. The student should not normally be in receipt of full Department of National Defence financial support for these studies. The bursary is sponsored by the Royal Canadian Regiment Trust, and is presented on the recommendation of the Faculty of the Division of Graduate Studies and Research.

9.3 THE BARRY D. HUNT MEMORIAL PRIZE

The Barry D. Hunt Prize is awarded annually to the best graduating graduate student in War Studies.

9.4 NATIONAL SCIENCES AND RESEARCH COUNCIL SCHOLARSHIPS

The National Sciences and Research Council (NSERC) fosters the discovery and application of knowledge through the support of university research and the training of scientists and engineers. The Council promotes the use of this knowledge to build a strong national economy and improve the quality of life of all Canadians. NSERC fulfils its mission by awarding grants and scholarships through a competitive process and by building partnerships among universities, governments and the private sector.

9.5 DEFENCE RESEARCH AND DEVELOPMENT CANADA

The Defence Research and Development Canada (DRDC) is the national authority for providing
scientific, engineering and technological leadership in the advancement and maintenance of Canada's defence capabilities. The R&D programme is carried out directly in five laboratories (Defence Research Establishments) located across Canada and indirectly through support at the Royal Military College of Canada in Kingston, Ontario.

The DRDC and RMC support the development of high-calibre Canadians in engineering, humanities and science through a number of fellowships tenable at the Royal Military College of Canada that provide financial assistance to graduate students engaged in Master's or Doctoral programmes in engineering or humanities or natural sciences.

9.6 WAR STUDIES SCHOLARSHIP

The Barry D. Hunt Memorial Fund and RMC support the development of top-rated scholars in the interdisciplinary programme of War Studies through a number of scholarships tenable at the Royal Military College of Canada that provide tuition assistance to graduate students engaged in Master's or Doctoral programmes.

9.7 SECURITY AND DEFENCE MANAGEMENT AND POLICY SCHOLARSHIP

RMC promotes the development of high-calibre scholarship in the field of Defence Management and Policy in support of professional development in the officer corps of the Canadian Forces. A number of scholarships are available tenable at the Royal Military College of Canada to provide tuition assistance for military and civilian graduate students engaged in the Master's degree programme.

9.8 THE COLONEL FRANK R. KOSSA COMMEMORATIVE BURSARY

This bursary is awarded to those students entering the second year of a Post Graduate Programme. The student should not normally be in receipt of full Department of National Defence financial support for these studies.

9.9 THE G.L. PICKARD PRIZE IN ACOUSTICS AND OCEANOGRAPHY

This prize is awarded to the outstanding Master of Science graduating student in Ocean Sciences, based on marks achieved in graduate courses and on the quality of the thesis.
9.10 THE ROYAL CANADIAN NAVAL COLLEGE CLASS OF '46 SCHOLARSHIP

This scholarship is awarded to the graduating member of the Naval Environment with the highest academic average in a Post Graduate Programme.

9.11 THE HIGH PERFORMANCE COMPUTING VIRTUAL LABORATORY (HPCVL) SCHOLARSHIP

The Sun Microsystems of Canada Scholarship in Computational Science was developed to encourage research in the broad areas of computational science, computational engineering, computational social science, computational humanities and computational medicine. Applicants must be enrolled in an accredited post-graduate degree programme at Carleton University, University of Ottawa, Queen's University or the Royal Military College of Canada. Deadlines for competitions will be posted on the HPCVL website www.hpcvl.org.

9.12 CANADIAN FORCES LOGISTICS BRANCH MEDAL OF ACADEMIC EXCELLENCE IN THE MBA PROGRAMME

Canadian Forces Logistics Branch Medal of Academic Excellence in the MBA Programme is awarded annually to the graduating student of the RMC MBA programme who has achieved the highest academic standing.

Areas Of Military Specialization

AREAS OF MILITARY SPECIALIZATION

Each year, the Canadian Forces selects, sponsors and sends to graduate study a number of officers to obtain education and qualification in subject areas of special importance and need to the military. These areas of specialty are denoted as the Occupational Specialty Specification (OSS) and are denoted within the military administration by a four letter alphanumeric code.

Some of the descriptors used by the military for the OSS codes link directly to a degree
programme such as the ADTU, AEOV, AEW, AEPB, AESV that are respectively named Electrical, Mechanical, Civil, Nuclear, and Chemical Engineering, and Business Administration. Other codes may not link in an obvious way to a degree programme such as ADOM Aerospace Systems, ADSB Telecommunications Management and AEPC Guided Weapons Systems, all of which require study in Electrical Engineering; AEOR Underwater Acoustics and AIEI Ocean Acoustics lie in Physics; and AESX Military Strategic Studies lies in War Studies.

Some OSS codes describe a specialty that may be best realised via an interdisciplinary programme tailored to meet the needs of the military and the sponsor. These include AENM Operations Research, AEPM Management Information Systems, AERK Systems Engineering, all of which would involve the Departments of Electrical & Computer Engineering, Mathematics & Computer Science, and Business Administration.

Graduate degrees currently offered at RMC under Department of National Defence sponsorship are listed by degree title in the lefthand column below. For convenience, in the righthand column where available are shown the corresponding OSS (Occupational Speciality Specification) designators for those programmes of graduate study sponsored under the Canadian Forces Postgraduate General Training Program which are normally available at RMC.

1.1 Programme Offered

The degree Master of Business Administration provides a general graduate education in management to those students who successfully complete the program requirements listed below. There are two completion patterns: the Course Pattern (20 courses); and the Project Pattern (17 courses plus a project). In addition there are two streams: the Logistics Stream which focuses on the management of the logistics function in an organization; and the General Stream which provides a broad-based management education. In both streams, students are given specific knowledge in a variety of subject areas that combine the viewpoints of the military, government, and commercial sectors.

The MBA curriculum is designed to accommodate the needs of any Military Occupation Classification or individual with resource management responsibilities. The Program accepts both full and part-time applicants and a limited number of civilians.

1.2 Admission Requirements

Students will be admitted under the General Regulations of the Division of Graduate Studies as set out in this Calendar. For admission into the MBA Program, an applicant must normally meet the following criteria:

- Hold an Honours Baccalaureate degree from a recognized university with at least second-class standing (70%);
- Obtain a satisfactory score on the Graduate Management Admissions Test (GMAT);

We will follow the established practice of other Ontario universities in admitting the occasional candidate who has a 3-year rather than a 4-year undergraduate degree provided that individual is a very high quality applicant and has had other types of educational and leadership exposures of a substantial nature. These candidates may be expected to do additional work over and above the normal degree requirements for a candidate with an Honours Baccalaureate degree. Normally such students will be admitted with Provisional or Probationary Status.

The requirement of writing the GMAT may be waived for an applicant who has obtained a Baccalaureate with a First Class or high Second Class standing.

Due to the nature of the MBA degree, candidates with suitable undergraduate formation and/or professional experience may apply for advanced credit. This application should be
made in writing to the MBA Chair and should occur at the time a candidate is applying to the program. Such application will normally require the candidate to provide documentation on the nature of the undergraduate/professional formation for which credit is sought. The awarding of advanced standing is discretionary. The MBA Committee will make a determination of eligibility for advanced standing and make a recommendation to the Dean of Graduate Studies. The candidate will be informed of any advanced credit in the letter of offer from the Dean of Graduate Studies.

An applicant may apply for credit for graduate courses taken at other recognized universities. An application for this type of credit will be considered where a student has taken a course similar to a course offered in the RMC MBA Program and obtained a passing mark in that course.

For students who have completed such courses prior to being admitted to the RMC MBA Program, a request for credit should normally be made in writing to the MBA Chair at the time of entry into the program. The awarding of the credit is discretionary. The MBA Committee will make a determination of eligibility for this type of credit and make a recommendation to the Dean of Graduate Studies.

1.3 Admission Procedure

Students seeking admission to the Royal Military College as graduate students should contact the Dean of Graduate Studies and Research, requesting an admission form and instructions on how to apply. Or the prospective student may find the Application Form on the Dean of Graduate Studies and Research web page. The admission form and corresponding instructions can be found at: [www.rmc.ca/academic/grad/index_e.html](http://www.rmc.ca/academic/grad/index_e.html)

1.4 Programme Requirements

To complete the MBA, students must successfully complete the equivalent of 20 (twenty), one-credit courses following the Course or Project pattern. Normally the decision to undertake a specific pattern is made after the first year of study. A student must choose either the General or Logistics stream.

**General Resource Management**

To complete the degree requirements for the General Resource Management Stream, students must complete the Core Component (all 12 courses):

- MBA521, MBA523, MBA525, MBA527, MBA529, MBA531, MBA537, MBA555, MBA561, MBA567, MBA569, MBA587.

Plus an Elective Component (8 of the following courses):

- MBA549, MBA539, MBA541, MBA579, MBA547, MBA551, MBA557, MBA563, MBA577, MBA573, MBA583, MBA571, MBA581, MBA585, and
- PR500 (equivalent of 3 term courses).

Students who want a more specialized program may substitute courses from other programs. These substitutions require the approval of the MBA Chair.
Logistics Management

To complete the degree requirements for the Logistics Management Stream via the Course Pattern students must complete the Core Component (12 courses - as specified above), the Advanced Logistics Component (at least 7 courses) and an Elective Component.

The Advanced Logistics component is:

- MBA547, MBA563, DM559, MBA549, MBA539, MBA541, MBA579, and MBA551.

The Elective component includes:

- MBA573, MBA577, MBA583, MBA571, MBA581, and MBA585.

A Project Pattern exists for the Logistics stream. To complete the Project Pattern, students must:

- complete the Core Component;
- at least 4 courses from the Advanced Logistics Component;
- at most 1 course from the Elective Component; and
- a Project.

Students wishing to substitute courses from other programs at RMC or other universities require the approval of the MBA Chair.

1.5 Other Regulations

Failed Courses

For RMC graduate courses, a failing grade is any grade less than 70%. For graduate courses taken at other universities for the purposes of satisfying RMC MBA degree requirements, the pass standard is that university’s standard. For courses taken and failed at other universities, it is the obligation of the student to inform the MBA Chair of a failure as soon as the student has received notice of the failure.

If the failed course is a Core MBA course, and the student has obtained a B average in all other courses taken, the student may apply to the MBA Committee to obtain permission to write a supplemental examination in the failed course. The MBA Committee shall determine if the student is to be recommended to the Graduate Studies Committee for the privilege of writing a supplemental examination. If such permission is granted, the MBA Committee will specify the terms and conditions for writing the supplemental examination subject to the general regulations of the Graduate Division concerning supplemental examinations. If such permission is not granted or the student fails the supplemental examination, the student must withdraw from the program.

If the failed course is an Elective course, and the student has obtained a B average in all other courses taken, the student may apply to the MBA Committee to obtain permission to write a supplemental examination in the failed course or to substitute another Elective course in its place. The MBA Committee will then seek permission from the Graduate Studies Committee for either the privilege of writing a supplemental examination or the course substitution. If such permission is granted, the MBA Committee will specify the terms and conditions for writing the supplemental examination subject to the general regulations of the Graduate Division concerning supplemental examinations. If such permission is not granted, the
student must withdraw from the program.

Only one supplemental examination will be permitted. Students having Probationary Status are not entitled to supplemental examinations.

**Normal Course Load**

For those students who register as full-time students, the normal course load in the Fall and Winter terms of the first year is four courses per term or the equivalent of four courses per term. Students seeking a reduction in this normal load must obtain the permission of the MBA Chair. It is the obligation of the MBA Committee to inform the Dean of Graduate Studies and Research and program sponsors of deviations from the normal course load.

**Project Approval and Evaluation**

Students wishing to complete the Project Pattern must first arrange a topic with a Supervisor. Under the direction of the Supervisor, the student must write a Project Proposal. Once the Proposal has been accepted by the Supervisor, it must be submitted to the MBA Chair for approval. Only when the MBA Chair has given his or her approval will the student be allowed to register in PR500.

The Supervisor is free to design any evaluation scheme he or she sees fit subject to the following requirements. The student must prepare a written Project Report summarizing the research. This Project Report will be examined in a formal defence by at least three Examiners, one of whom is the Supervisor. At least two of the Examiners must be members of the Graduate Faculty. It is the Supervisor's responsibility to put together the Examination Committee. This Committee must be approved by the MBA Chair. A copy of the Project Report must be in the hands of the Examiners at least a week (7 full days) prior to the day of the defence. Normally the defence will be preceded by a presentation to the wider RMC community. The object of the defence is to provide significant feedback to the student. Unless otherwise stipulated by the Supervisor, no grade will be assigned for the defence.

After the defence, the student is expected to incorporate any substantive concerns raised at the defence into a Final Project Report. Once these concerns have been dealt with to the satisfaction of the Supervisor, the Supervisor will assign a final grade. The Supervisor may incorporate the advice of the Examiners in the determination of this final grade. It is the responsibility of the Supervisor to submit a copy of the Final Project Report to the MBA Chair.

**Directed Studies Course Approval**

For students wishing to take one of the Directed Studies courses (MBA571/MBA581), the first step is to arrange a Supervisor. Once a Supervisor has been arranged, it is the responsibility of the Supervisor to submit a written Course Syllabus to the MBA Chair who must then approve the undertaking. The Course Syllabus must define the way the student will be evaluated. The Supervisor may require a written submission by the student in order to construct the Syllabus. Only when the course has been approved by the MBA Chair will the student be allowed to register.

**1.6 Course Descriptions**

<table>
<thead>
<tr>
<th>MBA521</th>
<th>Economics</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>
This course is divided into two distinct parts - microeconomics and macroeconomics. The portion of the course on microeconomics is intended to provide theoretical and practical knowledge of individual economic agents, including consumers, business firms, public sector agencies, workers and investors. The general approach is to examine the formulation of economic models of consumer behaviour and production. The macroeconomics portion of the course will examine national issues and interrelationships in the economy. The debates concerning fiscal, monetary and exchange rate policies will also be examined and foreign economies will be investigated.

**Lectures - 3 periods per week (one term)**

Credit(s): 1

<table>
<thead>
<tr>
<th>MBA523</th>
<th>QUANTITATIVE METHODS</th>
</tr>
</thead>
</table>

The course is intended to provide students with some of the quantitative tools and principles needed to analyse business problems in e.g. logistics systems. The emphasis is on the modelling of problems and interpretation of solutions, but some of the underlying mathematical theory will be covered as well. Material will be chosen from the following areas: network models; inventory models; linear and integer programming; dynamic and stochastic programming; and queuing theory. Classroom examples will emphasise defence applications.

**Pre-requisite: Students are assumed to have previously completed a half-course in probability and statistics, and a half-course in operations research or management science (linear programming in particular).**

*Students lacking the former may take BAE242A as a co-requisite; students lacking the latter will need to do extra work up-front in order to catch up.*

**Lectures - 3 periods per week (one term)**

Credit(s): 1

<table>
<thead>
<tr>
<th>MBA525</th>
<th>FINANCIAL ACCOUNTING</th>
</tr>
</thead>
</table>

This course provides an introduction to the principles, practices, and processes of financial accounting. The course emphasis is on accounting as an information system, which supports decision making in many different contexts. The theory and mechanics of financial accounting are introduced and consideration is given to how these aspects of accounting are manifested.
in practice and vary across settings. The four major financial statements are introduced and their component parts examined. The course emphasises the interpretation and use of accounting data downplaying the bookkeeping aspects.

**Lectures - 3 periods per week (one term)**

Credit(s): 1

---

**MBA527**  |  **MANAGEMENT ACCOUNTING**

This course is intended for students who are or will be assuming managerial roles in DND and will need to make use of Managerial Accounting Systems and Management Information Systems in their workplace. It is intended to help students make better use of the basic organisational data from these systems in order to make better decisions. All students will be required to submit a project as part of this course to demonstrate that they understand the application of the theory in the field.

---

**Lectures - 3 periods per week (one term)**

Credit(s): 1

---

**MBA529**  |  **MARKETING**

This course will focus on key areas in marketing management including; the role of marketing and the relationship with other areas of the organisations, market oriented strategic planning and market strategies, information systems, business and government markets, marketing programmes, logistics and marketing, and managing the marketing effort. The impact of customer behaviour, the effect of various levels of competition, and the impact of a variety of other organisational functions on strategy in the market place will be given particular attention.
MBA531  MANAGEMENT INFORMATION SYSTEMS
This course explores current capabilities and likely developments in computers and telecommunication technology, including software for database management and logistics support, and computer-based information systems (CBIS) as a transformer of business practice. A special emphasis is placed on CBIS for operational and managerial decision-making, decision-support systems for routine decisions and high level planning, and the development and control of CBIS.

---

Lectures - 3 periods per week (one term)
Credit(s): 1

MBA537  FINANCIAL MANAGEMENT
This course will provide the basic knowledge required in analysing financial data and making financial decisions. Financial decisions fall into three main categories. The first category relates to the investments that the firm makes in both short and long term assets. The second addresses how the firm is financed and the third covers how the firm makes its day-to-day operating decisions. The course will examine the framework in which financial managers work and the tools and concepts that they use. Topics will include the nature of the financial environment (domestic and international), the time value of money, valuation of stocks and bonds, risk and return, capital budgeting and the capital structure decision. Some time will be spent discussing derivatives, their increasing importance in the financial environment and their use as a key risk management tool.

---

Lectures - 3 periods per week (one term)
Credit(s): 1
MBA539

ANALYSIS AND DESIGN OF LOGISTICS SYSTEMS

The purpose of this course is to provide theoretical and practical foundations in logistics systems. It will define and analyse logistics from a perspective of a total system/product design and development process. The quality design of a system or product for reliability, maintainability and supportability has a major impact on the overall resources required to operate and support the system. The course will focus on major considerations such as system definition and analysis, design, choice, implementation and evaluation. It will emphasise how to develop logistics systems that fulfill their mission at the lowest overall life-cycle cost.

Lectures - 3 periods per week (one term)

Credit(s): 1

MBA541

SUPPLY CHAIN MANAGEMENT

Supply Chain Management is essential to any organisation. The twenty-first century organisation will use the supply chain to gain strategic advantages. Organisations must emphasise designing, planning and controlling their equipment, processes, materials and human resources in order to produce and deliver quality goods and services to their clients. Moreover, the linkage among suppliers, producers, and distributors heavily depends on the information co-ordination in the supply chains. Adoption and usage of information technology and electronic commerce on the Internet will be a strategic enabler to improve business processes and supply chains. The course will explore how organisations should use integrated supply chain management to reduce costs, improve customer service, and increase returns on assets and overall gain in market share.

Lectures - 3 periods per week (one term)

Credit(s): 1
**MBA543  INTERNATIONAL LOGISTICS**

The relationship between manufacturers, operations, the logistics function, and the CF at the international and multinational levels will be studied. A brief review of coalition formation will be given and applied to international and multinational operations. The important factors for co-operation between two or more nations as well as possible sources of friction at international and multinational levels will also be studied. A major logistics war game will be introduced and discussed. Topics that will also be included are: legal questions, inventory management, traffic management, material handling, the management of international logistics, the impact of cultural differences, and environmental protection. Cases will be used to motivate discussion of some of the issues.

**Lectures - 3 periods per week (one term)**

Credit(s): 

---

**MBA547  BUSINESS LAW**

The various ways the law influences business practice are studied in this course. The Canadian court system, civil procedure, and the growing influence of the Canadian Charter of Rights and Freedoms on business will be studied. Emphasis is placed on the law of tort and contract.

**Lectures - 3 periods per week (one term)**

Credit(s): 1

---

**MBA549  LOGISTICS MODELING AND SIMULATION**

This course offers advanced material in the application of modeling and simulation analysis techniques to logistics problems, particularly military logistics problems. Both process and Monte Carlo simulation are presented. Students will be introduced to simulation software tools such as @risk (Monte Carlo) and SIMUL8 (process simulation). Examples are drawn
from human resource management, finance, and operations management.

**Prequisite: MBA523**

**MBA551 ADVANCED FINANCE**

Corporate and Governmental Agency financial decisions will be examined in this course. The focus will be placed on areas such as agency theory, transaction cost theory, capital structure, dividend policy, control of the organisation through financial decisions, and risk management. A significant topic will be the use of equity and debt derivatives as tools in risk management.

**Lectures - 3 periods per week (one term)**

Credit(s): 1

**MBA555 OPERATIONS MANAGEMENT**

The focus of this course is on the important concepts of managing organisations and in particular on the effective and efficient creation and delivery of goods and services, including the important logistics elements. The blend of technical, human and economic considerations in an organisational setting will be studied. Topics that will be given particular consideration include design of product or service and process, capacity and demand management of services, materials management, and scheduling.

**Lectures - 3 periods per week (one term)**
MBA557  **FINANCIAL MANAGEMENT ACCOUNTING TOPICS**  
Studied in this course are selected topics in the fields of Financial and Management Accounting. The intention is that the course will be divided roughly in half with each half devoted to either Financial Accounting or Management Accounting.

**Prerequisites: MBA525 and MBA527**

**Lectures - 3 periods per week (one term)**

Credit(s): 1

MBA561  **STRATEGIC MANAGEMENT**  
This course examines the formulation and implementation of long-term strategy for the organisation and determination of strategic direction, as well as the management of the strategic process. Topics covered include: strategy formulation and strategic thinking; strategy, industry and competitive analysis; organisational redesign; strategic outsourcing and building of core competencies and strategic networks; strategy, resources and competencies; technology and strategic advantage; and strategic change process. The course is organised around cases and readings that structure and extend the student's understanding of complex organisational decisions, problems and situations.

**Lectures - 3 periods per week (one term)**

Credit(s): 1

MBA563  **TOPICS IN INDUSTRIAL RELATIONS**  
Selected topics of current interest in the area of Industrial Relations serve as the focus in this course. Areas that may be studied include alternate methods of contract negotiations, the changing workplace and the effects of relationships between the employee, management,
and employer that exist in the public and private sectors.

**Prerequisite:** MBA567 or MBA569, or with permission of professor

**Lectures - 3 periods per week (one term)**

<table>
<thead>
<tr>
<th>MBA567</th>
<th>ORGANISATIONAL BEHAVIOR AND THEORY I</th>
</tr>
</thead>
<tbody>
<tr>
<td>MBA567</td>
<td>ORGANISATIONAL BEHAVIOR AND THEORY I</td>
</tr>
</tbody>
</table>

Modern organisations find themselves in a climate of constant change. Without knowledge and understanding of the new workplace, leaders and managers will not be able to prepare their people and organisations for the challenges of tomorrow. Using the most recent developments from both organisation theory and organisational behaviour, this course will examine topics such as leadership and management, group dynamics, and corporate culture. Linkages will be explored between these new organisations and strategic human resource management policies and procedures. Extensive reference will be made to the Canadian Forces human resource system. The course uses a lecture and case study format, with members responsible for researching and presenting case study analyses.

<table>
<thead>
<tr>
<th>MBA569</th>
<th>STRATEGIC HUMAN RESOURCES MANAGEMENT</th>
</tr>
</thead>
<tbody>
<tr>
<td>MBA569</td>
<td>STRATEGIC HUMAN RESOURCES MANAGEMENT</td>
</tr>
</tbody>
</table>

This course is intended to provide an overview of strategies and management practices in Human Resources (HR) management with a specific focus on strategic issues rather than training HR professionals. The course will therefore help the student understand how the external environment and the internal organisational environment combine to affect the choice and implementation of strategies and policies in the traditional human resource disciplines. These disciplines include HR planning, recruitment and selection, compensation, motivation, evaluation, training, career development and career planning, as well as the field of employee relations and its sub-disciplines.
MBA571  DIRECTED STUDIES IN BUSINESS ADMINISTRATION I

This is an elective course for graduate students who are pursuing a degree under the Directed Studies Pattern. It provides students the opportunity to pursue a subject of academic merit that particularly interests them. The student is to determine a topic and then find a member of the faculty to supervise. Under the professor's guidance, the student will investigate the topic and prepare a written final report in a form appropriate for the chosen topic.

Prerequisite: Satisfactory progress in the student's programme and permission of the MBA Programme Chair

There are no lectures but work equivalent to a course of 3 periods per week for one term is required.

Credit(s): 1

MBA573  E-BUSINESS

E-Business has become a key enabler for business transformation through the use of Electronic Service Delivery (ESD) in both the public and private sectors. This course covers the essential elements necessary for planning and implementing successful ESD initiatives and strategies. It examines what has fundamentally changed for business and government with the advent of the World Wide Web (WWW) technologies on the Internet and looks at their impact on marketing, emergence of new business models, and the nature of business transactions with customers and between business entities. The course also provides an introduction to the technical dimension of planning and building ESD infrastructure such as security, electronic payment systems and supply chain integration. A balanced approach is taken in addressing issues from both the private sector and government ESD planner's perspectives.
Lectures - 3 periods per week (one term)

Credit(s): 1

MBA575

PUBLIC FINANCIAL MANAGEMENT

Public Financial Management aims at developing student capabilities in the analysis of financial operations and the management of public sector at all level of governments. The course covers the principles of finance, economics, accounting and fiscal administration that are relevant to the understanding of financial functions and financial management in the public sector. Relevant areas of study are: (1) Public budgeting - the budgetary process, politics and reforms (including performance budgeting); (2) Debt, investments, cash and risk management techniques; (3) Financial accounting, reporting and analysis of financial statements and; (4) Structure and administration of selected taxes. Additional areas may be included on the basis of student interests.

Lectures - 3 periods per week (one term)

Credit(s): 1

MBA577

SOCIAL AND ETHICAL ISSUES OF BUSINESS

This course focuses on the relevance of morality to business by introducing the student to ethical issues in business. The course starts with a general consideration of the nature of morality and a brief introduction to ethical theory. After this introduction the course focuses on specific ethical issues arising in the workplace such as; privacy in the workplace, sexual harassment, safety in the workplace, whistle blowing and employee loyalty, insider trading, property rights, incentives, bribes and kickbacks and ethics in production and marketing. Issues such as corporate responsibility as reflected in a business’s relationship with the community, the family and the environment are considered. Ethical issues arising out of international business and cross-cultural differences are also examined. The course emphasizes the importance of ethical and moral considerations to management planning and decision-making.
MBA579  MANAGEMENT OF TECHNOLOGY

The aim of this course is to help students develop a strong conceptual foundation for managing technology. It introduces concepts and frameworks for analysing how organisations can create, develop, commercialise, diffuse and capture value from high technology-based products and services. It studies how organisations manage the technological change process (marketing, R&D, engineering, and manufacturing) in new organisational forms. Topics covered include: 1) technological change and how it affects competition between new and existing organisations, 2) strategies for organisations competing in high-technology industries, 3) management of innovation within a corporation, 4) management of innovation across organisation boundaries (strategic alliances, entrepreneurship, venture capital), 5) technology commercialisation, and 6) protection of an invention that might someday be commercialised.

Lectures - 3 periods per week (one term)
Credit(s): 1

MBA581  DIRECTED STUDIES IN BUSINESS ADMINISTRATION II

This is an elective course for graduate students who are pursuing a degree under the Directed Studies Pattern. It provides students with a second opportunity to pursue a subject of academic merit that particularly interests them. Under the professor's guidance, the student will investigate the topic and prepare a written final report in a form appropriate for the chosen topic.

Prerequisite: Satisfactory progress in the student's programme, permission of the MBA Programme Chair, and completion of MBA571.

There are no lectures but work equivalent to a course of 3 periods per week for one term is required.
Credit(s): 1
MBA583  CONSUMER BEHAVIOUR

This course aims to assist graduate students in developing an analytical understanding of how Government and Business interact with each other in the Canadian economy. The Course will discuss rationale and limitations of government intervention and it will review policy tools and options available to Government in its dealings with Business. Current Canadian policy issues will be addressed throughout the review of framework legislation, regulations and other instruments as well as selected cases. International comparisons and cases will also be presented and discussed on numerous issues.

MBA585  GOVERNMENT, BUSINESS AND POLICY

This course aims to assist graduate students in developing an analytical understanding of how Government and Business interact with each other in the Canadian economy. The Course will discuss rationale and limitations of government intervention and it will review policy tools and options available to Government in its dealings with Business. Current Canadian policy issues will be addressed throughout the review of framework legislation, regulations and other instruments as well as selected cases. International comparisons and cases will also be presented and discussed on numerous issues.

3 periods per week (one term)

Credit(s): 1

MBA587  ORGANIZATIONAL BEHAVIOUR AND THEORY II

This course builds on, MBA567 - Organizational Behaviour and Theory I. The course examines and integrates individual, group and organizational level phenomena and processes using topics and theory from organizational behaviour and theory. Some topics
introduced in Organizational Behaviour and Theory I such as individual and organizational decision making, organizational culture and management of change in organizations are expanded and developed. New topics such as emotional labour, network structure of social capital, social loafing, management of innovation, management of high reliability organizations (i.e. nuclear plants, aircraft carriers), and management of interorganizational relationships are examined. The course uses a seminar format with discussion being based on books, journal articles, and cases.

**Prerequisite: MBA567.**

**3. DEPARTMENT OF FRENCH STUDIES**

**3. GENERAL INFORMATION**

**Department Head** - M. Benson

Telephone: 613-541-6000 ext 6447

Fax: 613-541-6952

[http://www.rmc.ca/academic/french/index_e.html](http://www.rmc.ca/academic/french/index_e.html)

**3.1 Courses Offered**

The Department of French Studies offers in alternating years, a course in French literature within the framework of the War Studies programme.
3.2 Course Descriptions

FR500 - Les conflits dans la littérature de langue française.

This course will deal with the way in which French literary works present various expressions of conflict (wars, uprisings, collective or individual rebellions, for example) and their consequences, both on an individual level and on a social level. Students will be expected to carry out extensive research and to produce detailed analyses.

Offered in French
Seminar - 3 periods per week (two terms)

Credit(s):

4. Department of History

4.1 Courses Offered

The Department of History offers courses within the framework of the War Studies programme.

Note: The History Department, as required, can develop courses in the following fields:

- Modern Strategic Thought
- Canadian Defence Policy
- Modern Japanese, French and Soviet Military History

4.2 Course Descriptions

HI510 - Canadian Society in the Age of Total War

This course will examine selected themes concerning the impact of the First and Second World Wars on Canadian society and politics. Among themes dealt with will be the impact of
total war on government, party politics, civil-military relations, external policies, human rights, popular culture, social and sectional conflicts, demographic development, women and ethnic groups, industrial and urban growth.

**HI610: (HI510 with additional work for PhD students)**

Seminar - 3 periods per week (two terms)

Credit(s): 2

---

**HI518  ASPECTS OF INTERNATIONAL HISTORY SINCE 1919**

This course will examine selected topics in international history from the Paris Peace Conference of 1919 until the recent past. Although the fundamental connection between personality and policy will be emphasised, the seminars and course of readings will integrate into this the diplomatic, economic, social, and strategic elements of modern international history by looking at such diverse issues as interwar disarmament discussions, appeasement, the origins and course of the Cold War, alliance diplomacy, international organisation, and strategic doctrine.

**HI618: (HI518 with additional work for PhD students)**

Seminar - 3 periods per week (two terms)

Credit(s): 2

---

**HI520  DEVELOPING SOCIETIES IN NORTH AMERICA TO THE MID-NINETEENTH CENTURY**

This course examines the economic, social, political and cultural history of Canada and the United States from the early colonial period to the mid-19th century. Themes to be considered will include the nature of the European people who settled the continent; their relations with Amerindians; the development of community leading to eventual political autonomy, and the emergence of the nation state.
HI620: (HI520 with additional work for PhD students)

- Seminar - 3 periods per week (two terms)
- Credit(s): 2

HI522: MODERN CANADA: 1870 TO THE PRESENT
A seminar course that will consider selected topics in the development of modern Canada: Discussion will revolve around issues arising from industrialisation, immigration, urbanisation and growing regionalisation and the impact of ethnic, racial, social and economic diversity on the development of the Canadian community.

HI622: (HI522 with additional work for PhD students)

- Seminar - 3 periods per week (two terms)
- Credit(s): 2

HI524: WOMEN, WAR AND SOCIETY
An exploration of selected themes in the history of women, war and society from the early modern period to the present. Topics will include changing understandings of the woman warrior; the impact of war on women and their place in the social, economic and political order; understandings of gender as they relate both to war and military institutions; and the intricate relationships of women and war in a "post-modern" world.
Seminar - 3 periods per week (two terms)

Credit(s): 2

5. DEPARTMENT OF MILITARY PSYCHOLOGY AND LEADERSHIP

5. GENERAL INFORMATION

Department Head - Robert C. St. John

Telephone: 613-541-6000 ext 6701

Fax: 613-541-6822

http://www.rmc.ca/academic/mpl/index_e.html

5.1 Courses Offered

The Department of Military Psychology and Leadership offers courses within the framework of the War Studies programme.

5.2 COURSE DESCRIPTIONS

WS527: Military Ethics

WS627: (WS527 with additional work for Ph.D. students)

WS530: Psychological Factors in Warfare and Human Conflict

WS630: (WS530 with additional work for Ph.D. students)

WS552: Leadership

WS652: (WS552 with additional work for Ph.D. students)

WS582: The Profession of Arms

WS682: (WS582 with additional work for PhD students)
6. INTERDEPARTMENTAL PROGRAMME IN SECURITY AND DEFENCE MANAGEMENT AND POLICY

6. GENERAL INFORMATION

Programme Chair - P.J.S. Dunnett

Executive Director - J.D. Harries

Programme Representative - L. Readman

Telephone: Programme Chair - (613) 541-6000 ext 6497

Telephone: Executive Director - (613) 541-6000 ext 3703

Telephone: Programme Representative - (613) 541-6000 ext 6586

Fax: (613) 541-6706

Email: madmp@rmc.ca

http://www.rmc.ca/academic/continuing/timetable/index_e.html

6.1 Programmes Offered

6.1.1 Master of Arts In Security and Defence Management and Policy

The Master of Arts in Security and Defence Management and Policy MA(SDMP) is an interdisciplinary academic degree. The programme collaborates closely with RMC's War Studies programme and draws significantly on material and staff of the Departments of Business Administration, Political Science and Economics, and Military Psychology and Leadership and increasingly on science and engineering subjects. Military and civilian individuals engaged or interested in the security environment, as it is and is emerging, in Canada and internationally, including traditional defence issues, will find the programme relevant and useful.

6.2 Admission Requirements

6.2.1 Master of Arts In Security and Defence Management and Policy

Candidates for the (MA SDMP) will be admitted under the general regulations of RMC. All candidates to the MA(SDMP) programme must have completed an Honours (four-year) Baccalaureate degree with a minimum 70% (B-) average in their graduating year. Candidates with lesser qualifications may be considered for acceptance with provisional or probationary
6.3 Admission Procedures

Candidates seeking admission to the Royal Military College as graduate students should contact the Dean of Graduate Studies and Research, requesting an admission form and instructions on how to apply. The admission form and corresponding instructions can be found at:

http://www.rmc.ca/academic/grad/forms_e.html

6.4 Programme Details

6.4.1 Programme Time Frames

In full-time enrolment it normally takes five academic terms to complete the programme, i.e., two academic years and the intervening summer. In part-time enrolment, a student is asked to complete their studies over a period of time not normally longer than five years, in accordance with RMC regulations.

6.4.2 Programme Professional Internship Credits

Students with appropriate career experience may apply to the Chair for up to two credits by submitting evidence of their experience and its relevance to the programme. These credits will be recorded on the transcript as DM505 - Professional Internship and DM507 - Advanced Professional Internship, as elective credits. The student should consult with the programme representative for further guidance.

6.4.3 Programme Formats

The programme is offered in three formats: all Course, Course plus Project and Course plus Thesis. All students are initially registered in the all-Course format. Students who wish to enter the Project or Thesis format can apply when they are approaching completion of the core courses and after consultation with the Chair or Executive Director of the MA(SDMP) Programme.

6.4.3.1 Course Format:

(12 one-term graduate courses)

The student must successfully complete six core courses plus six elective courses. Experience has shown that those students who focus first on core courses are successful sooner.

6.4.3.2 Course plus Project Format:

(10 one-term graduate courses plus a project)

The student must successfully complete six core courses plus four elective courses and complete a project. The project title and scope will normally be approved by the Chair after the student has completed three or more core courses.
6.4.3.3 Course plus Thesis Format:
(6 one-term graduate courses plus a thesis)

The student must successfully complete six core courses and submit and defend a thesis. The thesis title, scope and supervisor(s) will normally be approved by the Chair after the student has completed three or more core courses.

**CORE COURSES for the MA(SDMP):**

- DM537, DM539, DM555, DM569 and two of the following three courses DM521, DM523 and DM529.

**ELECTIVE COURSES for the MA(SDMP):**

- DM527, DM541, DM549, DM553, DM557, DM559 DM561, DM563, DM565, DM567, DM571, DM573, and
- Various MBA*, WS and other programme courses.

*Normally there is a maximum of four (4) MBA courses that students can take in their course of study.

DM521  CANADIAN GOVERNMENT AND PUBLIC POLICY

This course analyses different theories of public policy-making as applied by the Canadian government in the pursuit of "rationality", and in the determination of the "public interest" for Canadian citizens. Theories of public policymaking are ways of making sense of the structures, the processes and the people involved in deciding for the citizens. To explain the application of these theories is one purpose of this course. There is a substantive aspect to public policy-making, which is even more important than the procedural one. This course is designed to demonstrate this importance and its relevance to public policy-making in Canada.

Offered through WebCT

Credit(s): 1

DM523  DEFENCE DECISION-MAKING

This course examines the concepts that have been advanced from time to time to provide the structure for formulating and managing defence policy and commanding the Canadian Armed Forces. The main vehicles for this investigation are the studies and reports concerning the higher direction of national defence prepared between 1936 and 1992.
**DM527  PROFESSIONAL ETHICS AND DEFENCE MANAGEMENT**

This course is an examination of the military and ethical responsibilities of officers. Alternative ethical systems and norms of behaviour are evaluated. Moral conclusions as to the right, proper, and just decisions, and required military actions facing managerial morality problems are also drawn. The defence ethics programme and the conflict of interest philosophy are also two important subjects of the course, in keeping with the goals and ethical culture of the Canadian Forces. The approach will be multidisciplinary but the focus will be on the complexities of military operations from a legal perspective. Military professionalism, philosophical theories, and psychological perspectives are topics in the course. The aim is to assist the student in understanding the practical applications to military life of moral principles and ethical theories. The curriculum introduces opposing views on current controversial issues in order to incorporate debate as a useful instructional methodology for applying the military ethical doctrine to current practice within the Canadian Forces while respecting the Canadian Charter of Rights and Freedom.

**DM529  CANADIAN DEFENCE AND FOREIGN POLICY**

This course examines the development of Canadian defence policy and the factors that have helped mould and determine it from the Great War to the present. Such themes as threat perception, geopolitical considerations, alliance associations, governmental structures for decision making, personalities, force development, defence economics, the socio-military interface, and foreign and domestic policy concerns are part of the study. The course will be run using the specialised readings-seminar paper method.
**DM537  FINANCIAL DECISION-MAKING**

This course introduces students to principles of financial decision-making within a corporation and government department. Topics included are: costing theory and analysis (including regression analysis), construction of income statements for a manufacturing concern, cost-volume-profit analysis including breakeven analysis, the budget cycle for a manufacturing concern, standard costs and variance analysis, fixed cost allocation including Activity Based Costing, Business Planning, discounted cash flow analysis, security valuation, the cost of capital, Life Cycle Costing, risk analysis in financial planning, special DND budgeting issues, and derivative securities and their use in risk management.

---

**DM539  ECONOMICS OF DEFENCE**

This course is concerned with the application of economic methods of reasoning to defence policy issues and to questions of defence resource allocation. Elementary ideas of micro- and macroeconomic analysis are reviewed and employed to address issues such as the appropriate level of defence expenditures and the appropriate distribution of defence budgets between manpower and equipment. Specific topics include the economics of alliances, arms races, arms control, budget distributions, weapons procurement, manpower planning, economic warfare, disarmament and conversion. Elementary economic concepts are employed to develop approaches to structuring complex problems of defence resource allocation involving risk and uncertainty. The course also examines the effect of defence activities on economic performance at the national, regional and industrial levels.

---

**Offered through WebCT**

Credit(s): 1
DM541  
**ENVIRONMENTAL ASSESSMENT AND POLICY**

This course introduces the student to global environmental issues that interact with DND operations and policies. It develops an understanding of current federal environmental regulation and policy, and examines the use of impact assessment and risk analysis as strategic tools for the incorporation of environmental considerations into decision-making frameworks. The student will study, in detail, DND’s Environmental Assessment responsibilities, particularly with respect to concerns about the environmental impacts of departmental policies and programmes. Students will be encouraged to apply the methodologies and principals of environmental impact assessment and risk analysis to case studies of environmental strategic decision-making.

---

Offered through WebCT

Credit(s): 1

DM549  
**ECONOMICS OF NATIONAL SECURITY**

This course is concerned with the application of economics reasoning to national security policy issues and to questions of resource allocation towards national security and within government agencies for national security. Complex problems of national security resource allocation are addressed using game theoretic concepts of strategic analysis. The course reviews the fundamental concepts of economic analysis and then proceeds to apply them to demand side issues such as domestic security and democracy, regional and global security, and to supply side issues such as intelligence, enforcement, and legislation. Specific topics include street, food and health security, immigration, information and cyberspace, peacekeeping, intelligence, deterrence and preemption, domestic and international legislation.

---

Offered through WebCT

Credit(s): 1
**DM553**  
**DECISION ANALYSIS**

The course introduces students to the tools and techniques of decision analysis. Topics include: the psychological aspects of decision-making; optimisation techniques; spreadsheet modelling and sensitivity; risk analysis including Monte Carlo simulation and interval analysis; decision trees; multi-criteria decision-making; and group decision-making techniques. Where possible the techniques are motivated with defence examples.

**Offered through WebCT**

- -

Credit(s): 1

**DM555**  
**MANAGEMENT INFORMATION SYSTEMS FOR DEFENCE MANAGEMENT**

This course will focus on strategic issues involving the use of Information Systems/Information Technology (IS/IT). The course will focus on how the effective use and management of the Information Systems/Information Technology of a firm can help the firm meet its long-range goals and objectives. The course will help the student to develop a basic understanding of the concepts of IS/IT. It will then focus on how the external environment and the internal organisational environment combine to effect the choice and implementation of strategies and policies in the traditional IS/IT areas of: Management Information Systems, Decision Support Systems, Expert and Expert Support Systems, Information Systems Planning, and Information Systems Design and Development.

**Offered through WebCT**

- -

Credit(s): 1

**DM557**  
**STRATEGIC MANAGEMENT FOR DEFENCE**

The course studies and analyses environmental scanning, policy formulation, policy implementation, high command influence and control, environmental adaptation and management of change. The emphasis is on understanding the fundamental concepts as well as acquiring the ability to study and analyse complex managerial situations requiring strategic management thinking. Areas of study include: environmental scanning, critical resources, outsourcing, technology adoption, environmental adaptation, strategic planning,
operational support, organisational design, crisis management and international management. The course uses case studies in both the public and private sectors. Particular attention is given to strategic management in the military context, and in the DND organisation.

</table>

Offered through WebCT

Credit(s): 1

<table>
<thead>
<tr>
<th>DM561</th>
<th>ADVANCED APPLICATIONS IN DEFENCE MANAGEMENT</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>This course examines the general area of management from a number of viewpoints. The course will examine advanced material in more detail than in the other courses as well as offering new material in select areas such as accounting, finance, public policy, ethics, strategic management, economics of defence or other areas of relevance to the students area of interest.</td>
</tr>
</tbody>
</table>
**DM563  MODELLING AND SIMULATION I**
This course is intended to introduce students to the broad range of simulation activities currently being undertaken in the Canadian Forces. Emphasis will be placed on the theoretical underpinnings to modelling paradigms as opposed to the technical details of any particular simulation system. These include modelling techniques and designs for simulation, conditions for use, and the interpretations of results.

**DM565  CONFLICT ANALYSIS AND MANAGEMENT**
This course introduces the student to the area of Conflict Analysis and Management. The course will study conflict at three levels of resolution: Intrafirm, Inter-firm and International Conflict. Conflict Analysis and Management concepts will be studied in more depth from the point of view of qualitative and quantitative analysis. Quantitative analysis will include the systems theory and risk analysis and management perspectives. This will be followed by an examination of the different types and models prevalent in the area. Finally, various case studies will be used to highlight the important concepts which have been covered.
DM567  MANAGING AND RESOLVING VIOLENT CONFLICTS

This course examines the causes and correlates of violent conflict, and applies this to the study of conflict resolution before, during and after armed and organised violence within and between states. The evolution of conflict resolution as a discipline from the 1950s to the present, and hanging patterns of violence in the 20th century highlight third party roles and coercive and collaborative strategies. These themes are then explored through three phases in the conflict cycle: previolence, violence, and post-violence. Comparative case studies of prevention, management, and post-conflict reconstruction are drawn from post-Cold War conflicts. The course assumes knowledge of basic conflict analysis tools and vocabulary, and requires wide reading about contemporary conflicts. It is strongly recommended that DM565 Conflict Analysis and Management be taken before this course.

Offered through WebCT
- -
Credit(s): 1

DM569  ORGANISATIONAL THEORY

Organisational theory is the study of how socioeconomic entities called organisations function and how they affect and are affected by the environment in which they operate. Organisational theory is a multi-disciplinary body of knowledge that draws on sociology, psychology, political science, and economics. It explains the origins, development, transformation, persistence, and decline of organisations that order today’s life in a more and more complex and uncertain environment. This course attempts to explore core concepts in organisational theory and their inter-relationships. It examines current theories as well as the major known classical approaches about organisations. The main objectives are to understand why organisations exist, why organisations have the structure that they do, what is organisational structure; what are mechanisms of coordination, control, formalization, and centralization of power in organisations.

Offered through WebCT
- -
Credit(s): 1
DM571  DEFENCE TECHNOLOGY: STRATEGIES AND POLICIES

This course discusses defence technology as a goods/service/ideology process by examining its relationships with international affairs, national policies and security, and with military and paramilitary doctrine, capability and performance in peace and war. Topics include: history of defence technology; civilian-military relations; the military industrial complex; cycles of development; contemporary use of defence technology; tools and trends of technology foresight, national defence and trade policies; defence planning, programming and budgeting; and resource strategies for war and peace in alliance, coalition, and conflict settings now and in the future. Topical technology security issues to be addressed include: smart weapons, standardization and interoperability, dual-use goods and services, and impacts of globalization.

Offered through WebCT

Credit(s): 1

DM573  LEADING AND WORKING IN A DIVERSE ENVIRONMENT

This course will examine leading and working a diverse and multicultural environment within three contexts: (1) domestic organizations, (2) global or multinational organizations, and (3) military organizations. Diversity and multiculturalism add to the complexity of organizational environments by increasing the number of perspectives, interaction patterns, and approaches to leadership and management. Designed for the MA(SDMP) program, the course explores many of the questions and challenges facing today’s leaders.

Credit(s): 1

DM575  HUMAN SECURITY: THEORY AND PRACTICE

This course addresses the evolving global security environment in terms of existing and possible strategies, policies and actions for the demands and opportunities of a Human
Security regime. Theories and practices from the fields of history, psychology, international relations, politics, economics, project management and field engineering will be used in the study of the ways and means that determine how much freedom and dignity individuals enjoy as they live, move and work. A course focus will be real-world cases of interest and importance to Canada.

This course of studies investigates the relationships between the Profession of Arms and National Security policies. The field covers both applied and theoretical topics. Defence Studies are inherently interdisciplinary and draw upon defence management, economics, history, human resources management, international relations, peace studies, sociology, anthropology, strategic and security studies, warfare studies, and other academic disciplines. Some elements of the interdepartmental programme in Defence Studies are limited to competitively selected members of the profession, according to nationally and internationally recognised standards of professional competence.

Officers admitted to the Canadian Forces College through professional selection are deemed to be students of RMC, and their work will be assessed as part of a graduate programme. However they must apply for admission to any programme towards which they wish these credits to be counted.

### 7.1 Programme Offered

The Department of Defence Studies, a Department of the Faculty of Arts of the Royal Military College, manages the Programme. It includes military command, leadership and the conduct of major military operations and strategy including war fighting, peace support operations, and domestic operations for national security. The management of defence resources is also encompassed within defence studies.

Graduate level Defence Studies are an integral aspect of professional programmes of study designed for both the third and fourth development periods (DP3 and DP4) for Canadian officers. All Defence Studies courses are offered at the Canadian Forces College as components of the Joint Command and Staff Programme (JCSP), the Advanced Military Studies Programme (AMSP) and the National Security Studies Programme (NSSP). There are three components of Defence Studies: officership, strategic studies, and studies related to joint and combined warfare.

An independent Board of Visitors, consisting of eight senior academics, oversees the academic rigour of the Defence Studies field. The Commandant of the Canadian Forces College selects...
the chair of the board, and the Chair consults with the Commandant in the selection of the members.

The current members of the Board are:

- Dennis Stairs (Chair)
- Mark Milner
- Stephane Roussel
- Joel Sokolsky (ex officio)
- Brian Job
- Joseph Jockel
- Michel Fortmann
- John Hattendorf

The degree Master of Defence Studies (MDS) is offered to students of the Joint Command and Staff Programme (JCSP) at the Canadian Forces College (CFC) in Toronto concurrently with the JCSP. This is a professional one-year Master's Degree awarded by the Royal Military College of Canada (RMC) and approved by the Ontario Council of Graduate Studies. As a Professional degree, the MDS may not allow the holder to enter a PhD program at some institutions. In order to enter some PhD programmes, it may be necessary to complete additional work at the Master's level.

DS credits may be acceptable towards other graduate programmes. Check each programme's section in the calendar.

7.2 Admission Requirements

Students wishing to read for the MDS degree along with the JCSP must apply for admission to RMC in accordance with the procedures outlined in the general regulations defined in the RMC Graduate Calendar. Students from JCSP applying for the MDS will normally require an Honours (four year) bachelor's degree in Arts, Science or Engineering, or an equivalent from a recognized university with at least a "B" average (73% or better) standing in the last year.

7.3 Admission Procedure

Non JCSP students seeking admission to the Royal Military College as graduate students should contact the Dean of Graduate Studies and Research and request an Application form and instructions on how to apply. JCSP students will be briefed on the MDS programme at CFC. The Application form and corresponding instructions can be found at:

www.rmc.ca/academic/grad/forms_e.html.

7.4 Programme Requirements

Students admitted into the MDS programme must complete the JCSP curriculum, which includes eight credits for Defence Studies courses. In addition, students must write an Independent Research Project (PR500).

Credits for Defence Studies courses may be applied towards other degrees with the approval of the Chair of that programme.

Students enrolled in the MDS programme will have all written work marked in accordance with graduate studies standards that require that they maintain a minimum grade of B- (70
percent). Students will be assigned an academic advisor who will supervise and mark their work. The advisor will be an academic resident at the CFC campus of RMC in Toronto or at the main RMC campus in Kingston. Upon successful completion of all work required for the MDS degree, the CFC Registrar would forward the file to RMC for consideration by the RMC Senate. The MDS degrees will normally be awarded at the graduation ceremony at the CFC campus.

7.5 Programmes Descriptions

The Canadian Forces College offers a variety of courses for Canadian Forces regular and reserve officers, allied officers, and selected civilians. These courses are counted towards programmes managed by the Department of Defence Studies, but may not be acceptable in other programmes of study. Check each programme’s section in the calendar.

In the course descriptions that follow, the timing is indicative of credit weight. Actual timing and delivery may vary according to the scheduling of the JCSP (for example, a course indicated as three periods for one term may actually be delivered over two terms, but would still be worth one credit, based on total contact hours and form of evaluation).

7.5.1 Joint Command and Staff Programme

The Joint Command and Staff Programme (JCSP) is a one-year residential programme, which offers a coordinated selection of courses in a range of disciplines and related skills. It extends the knowledge base required by professional officers. It is intended primarily for Majors, and seeks to provide senior officers with the analytical and interpretive skills necessary for military success and quality leadership of the Canadian Forces. Students on the JCSP are competitively selected from amongst their peers, in accordance with exacting professional criteria. The curriculum emphasises command and leadership, ethics, and military operations across the spectrum of conflict. Operational art, understanding of national security, defence management and professional officership skills are developed through individual and collective effort on the course.

- DS521: Officership Studies
- DS522: National Security, International Affairs and Defence Management Studies
- DS523: Joint Warfare Yesterday, Today and Tomorrow
- DS524: Joint Operational Planning
- DS525: The Joint Force

7.5.2 Advanced Military Studies Programme

The advanced Military Studies Programme (AMSP) is a four-month residential programme, which offers courses designed to prepare senior officers for demanding command and leadership positions. Students are competitively selected in accordance with professional standards and potential for advancement. The curriculum emphasises leadership, joint and combined operations, and war fighting. The nature of the modern military profession makes international standards for the conduct of operations an essential element of each course.

- DS551: Operational Command and Leadership
- DS552: Joint Operations and Planning
- DS553: Selected Topics in Theory of Command, Doctrine, and Warfare

7.5.3 National Security Studies Programme
The National Strategic Studies Programme (NSSP) is a six-month residential programme, which offers courses designed to prepare senior officers for demanding command and leadership positions in a global environment. Students are competitively selected in accordance with professional standards and potential for advancement. The curriculum emphasises strategic leadership, joint and combined operations, and war fighting. The nature of the modern military profession makes international standards for the conduct of operations an essential element of each course.

- DS561: Strategic Command and Leadership
- DS562: Defence Management at the Strategic Level
- DS563: Canadian National Security and International Affairs
- DS564: Strategic Concepts and Operations
- PR500: Research Project

7.5.4 Additional Defence Studies Credits

Students requiring additional DS courses to complete the requirements for the MDS are invited to register for the following courses related to their professional duties, under appropriate supervision assigned by the Department of Defence Studies.

The following courses may be available by arrangement with faculty of the Department of Defence Studies.

- DS501: Analysis of Contemporary Conflict
- DS503: Field Research on Contemporary Conflict
- DS505: Analysis of Defence Headquarters Issues
- DS507: Field Research on Defence Headquarters Issues
- DS509: Analysis of Doctrinal Questions
- DS511: Empirical Research on Doctrinal Questions

7.6 COURSE DESCRIPTIONS

**DS501**  
**ANALYSIS OF CONTEMPORARY CONFLICT**

Students learn techniques for conflict analysis from a reading package and apply those techniques to analyze a recent or contemporary conflict drawing on primary and secondary sources. Students provide an assessment and critique of the utility of various analytical tools for the purposes of the research problem they have chosen.

---

Credit(s): 1
### DS503  
**FIELD RESEARCH ON CONTEMPORARY CONFLICT**

Drawing on primary and secondary sources, students map a conflict and identify researchable questions, consider ethical and safety issues, and deploy for a period of field research using Rapid Assessment Procedure (RAP) or a comparable technique. Research involving human subjects requires prior approval by a university Research Ethics Board. Supervisors may request evidence of competence in analytical techniques before permitting the field research to proceed. DS5xx Analysis of Contemporary Conflict is recommended as a companion course.

- -

Credit(s): 1

### DS505  
**ANALYSIS OF DEFENCE HEADQUARTERS ISSUES**

Students survey from a reading package analytical techniques drawing on various disciplines (organizational psychology, sociology, anthropology, and management science) appropriate to research in a complex headquarters environment. They then apply an appropriate technique to the study of a professional problem within a defence headquarters or similar organization. Students provide an assessment and critique of the utility of various analytical tools for the purposes of the research problem they have chosen.

- -

Credit(s): 1

### DS507  
**FIELD RESEARCH ON DEFENCE HEADQUARTERS ISSUES**

Drawing on primary and secondary sources, students identify researchable questions related to the functioning of a headquarters or staff organization, consider ethical and safety issues, and deploy for a period of research in the organization using an appropriate research technique. Research involving human subjects requires prior approval by a university Research Ethics Board and notification of the appropriate supervisors (including DHRRE).
Supervisors may request evidence of competence in analytical techniques before permitting the research to proceed. DS5xx Analysis of Defence Headquarters Issues, is recommended as companion course.

- -

Credit(s): 1

**DS509  ANALYSIS OF DOCTRINAL QUESTIONS**

Students survey historical debates on questions of military or related security doctrine from a study package, and identify techniques for analysis and resolution of doctrinal differences. They then apply appropriate techniques to the analysis of a recent or evolving doctrinal debate. Students provide an assessment and critique of the utility of various analytical tools for the purposes of the research problem they have chosen.

- -

Credit(s): 1

**DS511  EMPIRICAL RESEARCH ON DOCTRINAL QUESTIONS**

Drawing on primary and secondary sources, students identify a question of military or security doctrine for which there is expected to be an empirical answer. They identify research and analytical techniques that will yield empirical data from which to answer the doctrinal question. These may include gaming, simulation, field experimentation, observation, or case comparison. Research involving human subjects requires prior approval by a university Research Ethics Board and notification of the appropriate supervisors (including DHRRE). Supervisors may request evidence of competence in analytical techniques before permitting the research to proceed. DS5xx Analysis of Doctrinal Questions is recommended as a companion course.
**DS521 OFFICERSHIP STUDIES**

The course uses practical exercises, case studies, and small group discussions to explore leadership theory, communications skills, media relations, professional ethics, law of armed conflict, critical thinking and problem solving. Participants apply decision-making tools to resolve leadership scenarios, and subject experts provide evaluation and feedback based on experience and published research. Evaluation is by written essay (2500-3000 words) and practical exercises and simulation.

**Seminar - 3 periods a week (one term)**

Credit(s): 1

---

**DS522 NATIONAL SECURITY, INTERNATIONAL AFFAIRS AND DEFENCE MANAGEMENT STUDIES**

Students analyse domestic and international factors that influence decisions at the strategic level. Topics include national values interests policies, processes and issues that affect Canadian strategic decision makers. Canada's participation in international alliances and organisations, and its relations with various regions of the world are explored. Assessment is by evaluation of written work, oral presentations and participation in seminars and discussions.

**Seminar - 3 periods a week (two terms)**

Credit(s): 2
DS523 | JOINT WARFARE YESTERDAY, TODAY AND TOMORROW

This course provides the theoretical foundation for the study of the operational level of war. The first module of the course looks at classic military theory, development of the operational art, and current joint doctrine. The second module of the course looks to the future by examining emerging concepts, capabilities and threats. Assessment is by essay and oral presentation.

Seminar - 3 periods a week (two terms)

Credit(s): 2

DS524 | JOINT OPERATIONAL PLANNING

This course develops the knowledge and skills essential for the planning and conduct of joint and combined operations across the spectrum of conflict at the operational level. The course consists of practical exercises during which students work in teams to produce operational plans for war, stability operations, and domestic operations. Assessment is by oral presentation, exam and practical exercise.

Practical exercises (two terms)

Credit(s): 2

DS525 | THE JOINT FORCE

This course focuses on joint military force, interagency, and multinational capabilities available to joint force commanders (JFCs) to achieve effects across the spectrum of conflict. The course examines the available joint force capabilities by concentrating on joint operational tasks - those actions and processes accomplished by joint organizations under joint command and control using joint doctrine.
DS551  OPERATIONAL COMMAND AND LEADERSHIP
This course explores the factors affecting human adaptability and performance in operations at the operational planning level. Students broaden their awareness of command and leadership theory, communications skills, professional ethics, and human behaviour. Students are expected to have completed DS521 or its equivalent prior to this course. Assessment is by seminar participation, practical exercises in which students complete staff writing assignments.

DS552  JOINT OPERATIONS AND PLANNING
This course develops knowledge and skills essential to the planning and conduct of joint and combined operations in a complex international environment across the spectrum of conflict. Topics include component warfare in the conduct of joint operations, coalition and alliance operations, sustainment, rules of engagement, and the law of armed conflict. Assessment is by exercise, staff writing and case studies. Students are assumed to have completed DS523 or equivalent.
**DS553  SELECTED TOPICS IN THEORY OF COMMAND, DOCTRINE, AND WARFARE**

This course covers a range of issues related to command and the conduct of contemporary warfare at the operational level. Seminar topics include warfare theory, sustainment, command and control, ethics, operations, and coalition warfare. Students are assumed to have completed DS523 or equivalent. Assessment is by written and oral presentations.

_Seminar - 3 periods a week (one term)_

Credit(s): 1

---

**DS561  STRATEGIC COMMAND AND LEADERSHIP**

This course provides an examination of the nature, applicability, legitimacy and structure of command at the strategic level with particular emphasis on authority, accountability, and responsibility. Ethos, ethics and professionalism are examined. Students are exposed to the views of practitioners within a framework that addresses organisational vision, strategic crisis management, collegiality, collaboration, team building, negotiation, and leadership climate. Assessment is by case study. Students are expected to have completed DS521 or equivalent.

_Seminar - 3 periods a week (one term)_

Credit(s): 1

---

**DS562  DEFENCE MANAGEMENT AT THE STRATEGIC LEVEL**

This course analyses the management of human, financial material and information resources in DND and the CF. Students are challenged to meet specific objectives of the Canadian government in a cost-effective manner. Topics include human resource policy, planning and design, organisational effectiveness, defence resource planning, capital...
procurement and budget processes, change and knowledge management and decision analysis. Assessment is by exercise in which students develop force structure and defence policies. Students are assumed to have completed DS522 or equivalent.

---

**Seminar - 3 periods a week (one term)**

Credit(s): 1

---

**DS563  CANADIAN NATIONAL SECURITY AND INTERNATIONAL AFFAIRS**

This course analyses the internal and external factors that influence Canadian defence policy and strategic direction. It develops an understanding of government processes, intergovernmental and international relations in the context of national security. Students are assumed to have completed DS522 or equivalent. Assessment is by written and oral presentations in seminar.

---

**Seminar - 3 periods a week (one term)**

Credit(s): 1

---

**DS564  STRATEGIC CONCEPTS AND OPERATIONS**

This course analyses the range of issues related to the concepts of strategy, national power, political systems and the use of force. Topics include an examination of security policy, readiness, command and control, strategic monitoring, consultation with allies, and media strategy for domestic and international operations. Students are assumed to have completed DS522 and DS523 or equivalents. Assessment is by case study, short essay, and exercise.
 Seminar - 3 periods a week (one term)

Credit(s): 1

PR500

**RESEARCH PROJECT**

The aim of the Individual Research Project is to develop the participants' ability to think critically and communicate effectively in writing. This aim is accomplished by requiring the students to prepare a properly documented, persuasive essay on a topic of military significance over the course of their year at the College. Students pursuing the MDS are required to produce a paper of between 14,000 and 20,000 words in length.

Please visit the [War Studies Home page](mailto:warstudies@rmc.ca) for information on admission:
8.1 Programme Offered

The degree Master of Arts in War Studies is awarded to officers and civilians who successfully complete a programme of studies comprised of either a Course pattern or a Thesis pattern.

The PhD in War Studies, a residential programme at RMC, is awarded to officers and civilians who successfully complete the programme of study, as discussed in the following sections. The five areas of research are:

- International Relations,
- Defence Policy,
- Defence Economics,
- Military History and
- Intelligence Studies.

A Master of Arts Degree in War Studies through part-time registration in the Distance Learning Programme was initiated in 1992. This Programme is aimed at allowing officers and a limited number of civilians to continue their full-time employment while simultaneously pursuing an upper-level degree. Centres of teaching have been established at; Halifax, Fredericton, Quebec City, Ottawa, Toronto, Winnipeg, Edmonton, and Victoria.

The courses and degree patterns follow those of the regular programme described above. A select number of courses taught by RMC are available on the Internet, on a first come first served basis.

8.2 Admission Requirements

Candidates are admitted under the general regulations. For direct admission as a Regular Graduate student to a course of study in Master of Arts in War Studies, the applicant must hold an honours degree in Arts or Science, or Engineering or equivalent from a recognized university and have attained at least a B (73%) average in the final year. Entry to the PhD Programme is purely competitive. Applicants must have completed a thesis-route Masters degree or equivalent.

8.3 Admission Procedure

Candidates seeking admission to the Royal Military College as graduate students should contact the Dean of Graduate Studies and Research and request an admission form and instructions on how to apply. The admission form and corresponding instructions can be found at:

www.rmc.ca/academic/grad/forms_e.html

8.4 Programme Requirements

8.4.1 Master of Arts in War Studies

The degree of Master of Arts in War Studies will be awarded to students who successfully complete a programme of studies comprised of either of the following patterns:
- Course Pattern - 5 two-term graduate courses.
- Thesis Pattern - 3 two-term graduate courses plus a thesis.
- There is one core course (WS501) for both the Thesis and Course Patterns.

The MA in War Studies, when pursued full-time in the residential programme normally requires four academic terms or two academic years to complete.

8.4.2 Ph.D in War Studies Programme

The PhD in War Studies is a residential programme at RMC that normally requires five years to complete. Students will normally have to complete a two-year residency requirement to undertake course work and complete comprehensive examinations, followed by three years to research, write and defend the dissertation.

The doctoral programme of study is comprised of the following:

a. Three two-term graduate courses (covering a major field of study and two minor fields of study)
b. One term graduate methodology course
c. Three field examinations (covering a major field of study and two minor fields of study). Students register in CP600 course code every term until completion of examinations.
d. Successful defence of a dissertation. Students register in TH600 course code every term until defence and corrections are made to the dissertation.

8.4.2.1 Language Requirement

Doctoral candidates are required to show competence in one language other than their mother tongue (English or French). They must also pass a language test before being permitted to write the field examinations, or must show proof that the requirement has been met at the graduate level elsewhere.

8.5 COURSE DESCRIPTIONS

<table>
<thead>
<tr>
<th>WS500</th>
<th>THE THEORIES OF WAR FROM THE EIGHTEENTH CENTURY TO THE PRESENT</th>
</tr>
</thead>
<tbody>
<tr>
<td>This course is an in-depth study of the modern interpretations of warfare, including Clausewitz, Jomini, Hamley, Moltke, Schlieffen, and Foch. There will be course work on geopolitical and maritime doctrines of war by Mackinder, Haushofer, Mahan, and Corbett. The course examines doctrines of armoured and air warfare such as Fuller, Hart, and Douhet. Developments of military technology since 1945 and their impact on strategic thinking, the theories of deterrence, revolutionary and guerrilla war, disarmament and arms controls, and the international law of war, are also examined.</td>
<td></td>
</tr>
</tbody>
</table>

WS600: WS500 with additional work for Ph.D. students.
Core course for both Master's and PhD programmes.
Seminar - 3 periods per week (two terms)
This course examines the interlocking patterns of international politics and war. The traditional approach to international relations will be studied, as well as the more recent systems' analysis. The topics considered will include existing international organizations, problems of disarmament, arms control and peacekeeping, and governmental co-operation in wartime.

WS602: WS502 with additional work for Ph.D. students

Seminar - 3 periods per week (two terms)

Credit(s): 2

This course is concerned with the application of economic methods of reasoning to defence policy issues and to questions of defence resource allocation. Elementary ideas of micro- and macroeconomic analysis are reviewed and employed to address issues such as the appropriate level of defence expenditures and the appropriate distribution of defence budgets between manpower and equipment. Specific topics include the economics of alliances, arms races, arms controls, budget distributions, weapons procurement, manpower planning, economic warfare, disarmament and conversion. Elementary economic concepts are employed to develop approaches to structuring complex problems of defence resource allocation involving risk and uncertainty. The course also examines the effect of defence activities on economic performance at the national, regional and industrial levels.

WS603: WS503 with additional work for Ph.D. students

Seminar - 3 periods a week (one term)

Credit(s): 1

An analytical look at selected aspects of modern warfare, studying the evolution of warfare in
the Twentieth Century and the changing nature of military requirements of warfare.

**WS604: WS504 with additional work for Ph.D. students**

*Seminar - 3 periods per week (two terms)*

- -

Credit(s): 2

**WS505**

**SELECTED TOPICS IN DEFENCE ECONOMICS**

This course is structured around a selected theme drawn from the general field of defence economics. Included among the possible topics are areas like comparative defence budgeting, defence planning, weapons procurement, manpower planning, alternative provision, burden sharing in alliances, implications of changes in military technology, economic warfare, disarmament and conversion.

*Prerequisite: WS503 (WS603)*

**WS605: WS505 with additional work for Ph.D. students**

*Seminar - 3 periods a week (one term)*

- -

Credit(s): 1

**WS506**

**CIVIL AND MILITARY RELATIONS SINCE 1815**

This Seminar course examines the civil-military relationship of selected major Powers since 1815. Reading and discussion will probe the influence of political control over the size, disposition, and strategic use of armed forces, the influence of the military in making national policies, legal and constitutional questions arising out of the relationship of the armed forces to civil authority, and the bureaucratic structure of defence organizations and their relationship to the domestic and foreign policies of the governments they serve. In this, the changing economic, political, social and technological milieu, which affected the civil-military dynamic, will be an important consideration. Each year the course will be structured around a unifying theme. Some of these include the development of national strategy, the rise and fall of states, strategic studies and the problem of power and war planning in peacetime.
**WS606: WS506 with additional work for Ph.D. students**

Seminar - 3 periods per week (two terms)

- -

Credit(s): 2

---

**WS507**  
**METHODOLOGY**

The course introduces the study of war in a multi-disciplinarian perspective. Various research methodologies and resources, including archival work, are introduced. Major trend and interpretations in the examination of war are explored, as are issues and problems of contemporary research.

---

**WS607: WS507 with additional work for Ph.D. students**

Seminar - 3 periods per week (one term)

- -

Credit(s): 1

---

**WS509**  
**EVOLUTION AND THEORY OF INTERNATIONAL PEACEKEEPING**

This course examines the evolution of international peacekeeping, and the theory of third party intervention as a mechanism for conflict management. The evolution of interventions is traced from 19th century imperial policing and small wars to League of Nations Mandates, peace observation, and the UN system. Conflict resolution theory has some impact on peacekeeping after 1956, and new forms of post-colonial peacekeeping and stabilisation missions characterize the Cold War period. These are examined from an interdisciplinary perspective.

---

**WS609: WS509 with additional work for Ph.D. Students**

Seminar - 3 periods a week (One Term)

- -

Credit(s): 1
This course considers peacekeeping and international stabilisation operations since the 1980s, with a focus on operations mounted by the UN and regional organizations. The political, strategic and tactical dimensions of peacekeeping are considered, drawing on the academic disciplines of history, political science, and social psychology. The course reviews efforts to improve and reform the conduct of international peacekeeping in light of recent experience, and the normative biases of peace studies, conflict resolution, and strategic studies.

**WS611: WS511 with additional work for Ph.D. students**

Seminar - 3 periods a week (One Term)

Credit(s): 1

**WS512: CANADIAN DEFENCE STUDIES: HISTORICAL AND CONTEMPORARY DIMENSIONS**

This course is a study of the interaction of military, domestic and foreign politics in Canada since the colonial regimes. This course consists of specialized reading and the preparation of working papers for Seminar discussion.

**WS612: WS512 with additional work for Ph.D. students**

Seminar - 3 periods per week (two terms)

Credit(s): 2

**WS516: MODERN WARFARE AND TECHNOLOGICAL DEVELOPMENT**

This course deals with an examination of the relationships that exist between technology and the military. Military doctrine, tactics strategy, logistics and organization will be investigated to determine the influence and effect that technological growth and innovation exerts in peace and war.
Seminar - 3 periods per week (two terms)

- -

Credit(s): 2

WS518 | War, Revolution and Peace in Modern East Asia
This course examines in detail, the impact of war, revolution and peace on the modern transformation of China, Japan and Korea from the late eighteenth century to the present.

WS618: WS518 with additional work for Ph.D. Students

Seminar - 3 periods per week (two terms)

- -

Credit(s): 2

WS520 | Maritime Strategy and Naval Policy
A Seminar in maritime strategy will be placed on naval strategic theory and policy development in the nineteenth and twentieth centuries. Generally, the Seminar will examine the nature of sea power, its use as an instrument of international relations in war and peace, and the effects of technological, social, economic and political change upon policy formulation by the major maritime powers.

WS620: WS520 with additional work for Ph.D. Students

Seminar - 3 periods per week (two terms)

- -

Credit(s): 2

WS522 | The Foreign Policies of Russia Since 1917
This course is a study of the Russian foreign policies since the Revolution of 1917. The course will examine Soviet relations with capitalist states, developing nations and members of the Socialist camps; the history of the Comintern and the Cominform; the role of the communist Party in decision-making; the ideological formulation of foreign policy making as well as
Soviet theories of international relations; and the changing constellation of international Power since the end of the Cold War.

**WS622: WS522 with additional work for Ph.D. Students**

*Seminar - 3 periods per week (two terms)*

- -

Credit(s): 2

**WS524** | **THE IMPACT OF TOTAL WAR IN THE TWENTIETH CENTURY**

This course examines the military, political, social and economic influences of total war on European society in the twentieth century. Special consideration will be given to the development of machinery for the higher direction of total wars, the problems of peacetime diplomacy and military preparation, the relationship between domestic and foreign policies, and the difficulties faced by democratic and totalitarian states in waging total war. The major emphasis will be on Germany, Britain, Russia, and France, although reference will be made to other European countries and to the United States.

**WS624: WS524 with additional work for Ph.D. Students**

*Seminar - 3 periods per week (two terms)*

- -

Credit(s): 2

**WS527** | **MILITARY ETHICS**

This course is devoted to the study of ethics in the military profession. Topics include ethical theory, ethical decision-making, the professional military ethic, just war theory, moral development, and ethical failure. Throughout the course, students will be encouraged to apply ethical concepts to the Canadian military profession.

**WS627: WS527 with additional work for Ph.D. students**

*Seminar - 3 periods a week (One term)*
WS528: ADVANCED DIRECTED STUDIES

In this course, the format and content vary to meet specific requirements of candidates. Normally, it involves extensive individual research under the direction of the instructor as well as submission of substantial research papers of graduate Seminar quality.

WS628: WS528 with additional work for Ph.D. students

Seminar - 3 periods per week (two terms)

Credit(s): 2

WS529: SPECIAL TOPICS

This course affords students the opportunity to examine a specific topic in war and peace not available through other courses offered. Normally, this course is conducted as a directed studies course (i.e., reading course) and involves individual research under the direction of the instructor and submission of research papers of graduate seminar quality.

WS629: WS529 with additional work for Ph.D. students

Seminar - 3 periods per week (one term)

Credit(s): 1

WS530: PSYCHOLOGICAL FACTORS IN WARFARE AND HUMAN CONFLICT

This course examines the application of behavioural science findings to situations of conflict between human beings. Psychological and sociological approaches to conflict between individuals and groups are examined and integrated from a social-psychological perspective. Special consideration will be given to the role of individual processes (perceptions, attitudes, motivation and morale, stress reactions, human limitations) as well as group processes (values, ideology, group cohesion, leadership, psychological warfare) in understanding both
the sources of conflict and the behaviour of individuals during times of conflict.

**WS630: WS530 with additional work for Ph.D. students**

Seminar - 3 periods per week (two terms)

Credit(s): 2

**WS531**  
**AMERICAN FOREIGN AND DEFENCE POLICY: 1776 TO THE PRESENT**

This course covers American foreign policy from the early days of the Republic to the present with an emphasis on the post-1968 period. In addition to examining trends and events, the course also considers the major intellectual debates about U.S. foreign relations as well as the institutions and policies processes associated with U.S. foreign policy.

**WS631: WS531 with additional work for Ph.D. Students**

Seminar - 3 periods a week (One Term)

Credit(s): 1

**WS533**  
**STUDIES IN AMERICAN DEFENCE POLICY**

This course examines contemporary American defense policy from a strategic, political, economic and bureaucratic perspective. It begins with a discussion of various concepts and ideas about U.S. defense policy, looks at the post-Cold War era and the War on Terrorism and moves on to consideration of the institutions and processes associated with the making and implementation of defense policy in the United States.

**WS633: WS533 with additional work for Ph.D. Students**

Seminar - 3 periods a week (One Term)

- -
The phenomenon of war is explored through literature. Wars and conflicts are examined using literature source material, covering different historical periods. The course requirements and texts can be adjusted to meet the specific interests of the candidates.

**WS636: WS536 with additional work for Ph.D. students**

*Seminar - 3 periods per week (two terms)*

Credit(s): **2**

This course offers a comparative study of the organizations which compose the Western intelligence community. Historical examinations facilitate an understanding of intelligence in national security policy. The contemporary dimension serves to explore those domestic processes and external factors which drive national intelligence efforts.

**WS540: THE DEVELOPMENT OF AEROSPACE POWER: THEORY AND PRACTICE**

This course will examine the development of air power and aerospace power with a particular focus on theories of air and aerospace power and their effect on the conduct of war throughout the century. Seminars will study the nature of air power and aerospace power, its use in war and peace, and the effects of technological, social, economic, and political change on the application of air and aerospace power. The course will develop a framework for understanding the interplay between strategy, military innovation, defence policy, and technology.
**WS640: WS540 with additional work for Ph.D. students**

---

**WS549**  |  **AEROSPACE LAW AND POLICY**

A comprehensive study of the international laws and policies regulating air, space, and cyber military operations. The first part of the course will review principles of public international law. Topics covered in the first part are: the formation of international law, subjects of international law, the UN system, the use of force. The second part of the course will concentrate on the laws applicable to military air operations. Topics covered in the second part are: the definition of national air space, international air space, the issue of Canadian northern sovereignty, the legal status of military aircraft, air operations ROE, UN air operations, reconnaissance flights, interception of aircraft. The third part of the course will concentrate on military space operations. Topics studied in the third part are: space law treaties, UNCOPUOS, remote sensing, US commercial regulations on remote sensing, the RADARSAT projects, the projection of force to, in, and from space, the military/commercial interface. The fourth part of the course will cover the topic of information and cyber military

WS550  GREAT POWERS IN THE PACIFIC: 1870 TO THE PRESENT

This course will provide students with a detailed examination of the Far Eastern balance of Power that existed between China, Japan, Russia, Britain and the United States from 1870 to present day. Military, economic, political, naval and social factors will be woven into a comprehensive analysis of the inter-related Far Eastern interests of these Powers, Minor Powers, such as France, Germany, and Holland, will also be discussed where appropriate, as will American involvement in Korea and Vietnam. The object of the course is to provide the historical context, which will allow a full understanding of the development of the Pacific region and its relationship with Western Powers.

WS650: WS550 with additional work for Ph.D. students

Seminar - 3 periods per week (two terms)
- -
Credit(s): 2

WS551  EVOLUTION OF COLD WAR NUCLEAR STRATEGY

This course will examine the evolution of nuclear strategy during the Cold War. It will concentrate mainly on strategic doctrine as it was developed by the two superpowers, the USA and the USSR. It will also consider doctrinal developments of the other Cold War nuclear powers' the Peoples' Republic of China, France and the United Kingdom. A central part of the course will involve students becoming knowledgeable about the core military technologies of the Cold War era, that is, strategic ballistic missiles and nuclear weapons. As part of this process, students will be introduced to some of the important analytical approaches in the development of Cold War strategy such as the theory of games, force exchange modelling and correlation of forces analysis.

WS556 CANADIAN GOVERNMENT, POLITICAL PARTIES, AND PUBLIC OPINION

This course will offer students analytical insights into the study of the Canadian Federal system, political parties, and contemporary public opinion. The analysis will commence with an overview of the evolution of the federal system and then proceed to explore the historical, ideological, and organizational developments of Canadian political parties. The complexities of a federal party system and the relative impact of regionalism will be examined as will other social (education, gender, and age) and economic factors (income) affecting the operation of parties. The shifting landscape in Canadian and Quebec public opinion will also be explored. The course will conclude with an analysis of the most recent federal election and the future of the Canadian federation and its party system.

WS656: WS556 with additional work for Ph.D. students

Seminar - 3 hours per week (two terms)

Credit(s): 2

WS558 AMPHIBIOUS (LITTORAL) WARFARE

This course examines the employment of descent operations from the sea in historical and contemporary perspectives. The advent of the United States Navy doctrine "Forward-From the Sea" rededicated the USN to preparing for and supporting amphibious landing operations. The United Kingdom's "Defence Strategic Review" also rededicated British Forces for such operations to highlight their tactical, operational, and strategic dimensions. As large joint and often combined operations, amphibious landings have served many purposes, from feints (as during the Gulf War) to the opening of strategic theatres for attrition or manoeuvre warfare (as in Portugal during the Peninsular War, or Gallipoli during the Great War). The experiences of the British, Canadian and various American forces will be used as the basis for historical comparative analysis and the critical examination of contemporary theory.

WS658: WS558 with additional work for Ph.D. students

Seminar - 3 hours per week (two terms)

Credit(s): 2
WS559: ASPECTS OF INTERNATIONAL HISTORY 1919 - 1945 (NEW)

This course will examine selected topics in international history from the Paris Peace Conference of 1919 until the end of the Second World War. Although the fundamental connection between personality and policy will be emphasized, the seminars and course readings will integrate into this the diplomatic, economic, social, and strategic elements of modern international history by looking at such diverse issues as inter-war searches in Europe and the Far East, disarmament discussions, reparations and war debts, appeasement, the origins and course of the Second World War.

WS561: ASPECTS OF INTERNATIONAL HISTORY SINCE 1945

This course will examine selected topics in international history from the end of the Second World War until the recent past. Although the fundamental connection between personality and policy will be emphasized, the seminars and course readings will integrate into this the diplomatic, economic, social and strategic elements of modern international history by looking at such diverse issues as the origins and course of the Cold War, decolonisation, alliance diplomacy, international organization, and the evolution of foreign policy and strategic doctrine.

WS562: COMPETITIVE AND ECONOMIC INTELLIGENCE

This course examines both corporate competitive intelligence methods and practices and national economic intelligence requirements. The separation of these activities within the Canadian intelligence community is not necessarily shared by our competitors. The United States and Britain agreed not to employ national agencies in competitive intelligence only in 1946, while other countries tie their collection of corporate competitive intelligence to national economic intelligence. This course considers the disparate methodologies employed
in both fields.

**WS662: WS562 with additional work for Ph.D. students**

*Seminar - 3 periods per week (two terms)*

Credit(s): 2

**WS564: INTELLIGENCE METHODOLOGIES AND OPERATIONAL CASE STUDIES**

This course examines the methodologies of intelligence operations, including issues of deception, human and technical intelligence gathering, counter-intelligence, and more. Case studies will include the operations of a number of countries including the United States, Great Britain, France, Germany and Israel.

**WS664: WS564 with additional work for Ph.D. students**

*Seminar - 3 periods per week (two terms)*

Credit(s): 2

**WS566: THE INTERNATIONAL SECURITY ENVIRONMENT**

This course brings diverse analytical methodologies to bear in evaluating the evolving international security environment. It will examine the ways by which both individual states and alliances assess security threats, devise policy, and implement this policy. The connection between the intelligence services (individually and by intra-service and extra-service co-operation) and the governmental decision-making apparatuses will be emphasised. In addition, through case study analysis, both intelligence successes and failures will be studied. Seminar - 3 periods per week (two terms)
**WS568: CASE STUDIES IN REGIONAL ANALYSIS**

This course takes a crisis-centred approach to introduce students to the May-Neustadt model of analysis (the Harvard model). This time-line technique is now widely used throughout the United States government. Regional case studies (for instance, Central America, South America, north, central or southern Africa, the Middle East, and south, south-east, or east Asia will be chosen for each student to work through and present analysis based on open sources.

**WS668: WS568 with additional work for Ph.D. students**

Credit(s): 2

---

**WS570: GREAT POWERS AND INTELLIGENCE**

This course addresses three broad historical areas. First, it identifies the differing intelligence cultures within the so-called `Great' and `Super' Power since 1815: France, Great Britain, Japan, Prussia/Germany, Russia, and the United States. Second, it addresses the utilisation of intelligence within both these Powers and any alliances in which they entered. Finally, it addresses the impact of intelligence on foreign policy formulation in war and peace over the past almost two hundred years.

**WS670: WS570 with additional work for Ph.D. students**

Seminar - 3 periods per week (two terms)

Credit(s):

---

**WS572: ISSUES IN CANADIAN AMERICAN INTELLIGENCE SINCE THE SECOND WORLD WAR**

The history of Canadian-American intelligence relations has evolved in the larger context of the North Atlantic triangle. The Second World War is the modern turning point for Canadian
intelligence because, for the first time, Canada began foreign military intelligence operations and also adopted new technologies. This course will look at the Canadian-American intelligence relationship; the structure and functions of Canadian intelligence agencies, which were based originally on a British model; the transition from the British to the Canadian model; some unique questions relating to domestic operations; and how the two North American Powers, in terms of intelligence, have become more closely integrated. After examining historical issues relating to the relationship during Cold War, more contemporary topics can be explored.

**WS672:** WS572 with additional work for Ph.D. students

*Seminar - 3 periods per week (two terms)*

Credit(s): 2

---

### WS574: Asymmetric Threats

The burgeoning literature on Asymmetric Warfare and the events of 9/11 have sparked wide interest in Asymmetric Warfare. This course offers an introduction to the topic with particular attention paid to the forms of asymmetric threats, primarily via Weapons of Mass Destruction (Nuclear, Chemical, and Biological), and threats to critical infrastructure through weapons of mass disruption. Discussion focuses on the theory and practice by first situating the discussion within a wider strategic theory literature, particularly that on terrorism and low intensity war theory. The course proceeds through an extended review of the nature of chemical, biological and nuclear threats, and emerging threats to critical infrastructure. The central focus of the initial weeks of the course is the introduction and incorporation of some advanced qualitative analytical models. As well, control regimes (Arms Control), and consequence management are explored within the context of the various threats.

---

### WS582: The Profession of Arms

This course will examine the military profession from a multi-disciplinary perspective. Students will study relevant theory and research from the disciplines of philosophy, psychology, sociology, politics and history. A significant portion of the course will be devoted
to the study of ethics in the military profession. Specific topics will include: ethical decision-processes, the professional military ethic, just war theory, moral development, ethical failure, military culture and ethos, diversity in the military, civil-military relations, the non-commissioned officer corps, and the general officer corps.

**WS686: WS586 with additional work for Ph.D. students**

Seminar - 3 periods per week (two terms)
This seminar examines the Second World War from the tactical level to that of grand strategy. Issues of diplomacy, coalition warfare, national mobilization, campaign planning and battle will be examined from the perspectives of all the major powers. Particular emphasis will be placed on the war efforts of Great Britain, the United States, Germany, the Soviet Union, Japan, Italy, France and Canada.

**WS688: WS588 with additional work for Ph.D Students**
Seminar - 3 periods a week (two terms)

Credit(s): 2

This course will examine the changing way in which states have addressed international security issues since 1945. This series of seminars will involve an examination of the primary theoretical approaches to explaining international relations, especially issues of war and peace between states. The theoretical discussion will be accompanied by study of the practical efforts that have been taken by states, such as the development of international organizations and laws, to deal with security issues, and the changes that have occurred in the nature of the state system during that same time.

**WS589: WS589 with additional work for Ph.D. Students**

Seminar - 3 periods a week (one term)

Credit(s): 1

This seminar examines the military, social, and political dimensions of Canada's war experience since 1860, with particular emphasis on the Boer War, the Great War, the Second World War, the Korean Conflict, and peace support operations. Specific themes will include...
imperial and coalition warfare, national mobilization, battle doctrine, naval and air operations, the home-front, the memory of war, and the individual soldier's war.

**WS690: WS590 with additional work for Ph.D Students.**

*Seminar - 3 periods a week (two terms)*

Credit(s): 2

**WS691: WS591 with additional work for Ph.D. Students**

*Seminar - 3 periods a week (One Term)*

Credit(s): 1

**WS593**  
**THE NEWS MEDIA AND THE MILITARY**  
This course examines the relationship between the news media and the military within the broader context of the pervasive presence of mass media of communication in the political and cultural realms. A critical personal inventory of the students' habits as mass media consumers forms the basis for the course and for each class. The course studies the rhetoric of mass media communication from Plato to today before shifting focus to an investigation of the newsroom, the business and marketing pressures affecting its operation, and the constitutional and legal rights and responsibilities related to freedom of the press. Students will survey and examine in detail examples and case studies of the evolving relationship between the news media and the military in Canada and elsewhere. The aim to this course is to enable students to critically analyze various print and electronic news products, including their modes and styles of presentation, and to evaluate their relationship to the military.
**WS693: WS593 with additional work for Ph.D. Students**

**Seminar - 3 hours per week (One Term)**

Credit(s): 1

---

**WS595**

**ARMED FORCES IN SOCIETY**

This course examines the relationship between Armed Forces and society in a contemporary and comparative perspective. Beginning with an analysis of the classic and recent literature on civil-military relations, the course looks at trends in the United States, Canada, Western Europe, the newly emerging democracies of Eastern Europe and the former Soviet Union. It also examines the relationship amongst the military, government and civil society in Asia and the Middle East.

---

**WS695: WS595 with additional work for Ph.D. Students**

**Seminar - 3 hours per week (One Term)**

Credit(s): 1

---

**WS597**

**POST-COLD WAR NUCLEAR POLICY**

This course will examine the role of nuclear weapons in the overall security policy of nuclear and near-nuclear states in the post-Cold War (Second Nuclear) era. The potential strategic uses of nuclear weapons in this era will be markedly different than those seen in the Cold War. Indeed, it is already clear that the central nuclear security paradigm of the Cold War (retaliatory deterrence) is no longer viable. An increase in the number of nuclear states; changes in delivery technology; changes in warhead technology and substantial changes in the overall security environment are examples of the new strategic imperatives that have combined to create novel nuclear security challenges for post-Cold War states. That this new strategic context will be shaped mainly by the strategic policy postures of old and new nuclear states and possibly non-state actors is the undeniable reality of the Second Nuclear Era. It is this interplay of nuclear strategy, nuclear weapon technology and changed perspectives on the utility of strategic nuclear war that is the central focus of this course. Examples of the issues that students will analyse in the course are the strategic implications of vertical and horizontal proliferation, the Nth + 1 country problem, the shift in the structure of deterrence, nuclear terrorism and the possible move to nuclear war-fighting strategies. As part of the analytical component of the course students will be introduced to strategic analytical methods such as nuclear pre-attack static indicators, strategic correlation of forces analysis, theory of games, conflict analysis and some force targeting models.

9. DEPARTMENT OF MATHEMATICS AND COMPUTER SCIENCE

9. GENERAL INFORMATION

Department Head - Dr. G. Simons

Telephone: 613-541-6000 ext 6458/6459

Fax: 613-541-6584

http://www.rmc.ca/academic/math_cs/index_e.html

9.1 Programmes Offered

The department of Mathematics and Computer Science offers the Master's and Doctoral degrees in Science, with specialty fields of Mathematics and Computer Science.

Graduate research may be pursued in the following areas:

- artificial intelligence
- constraint programming
- data base
- intelligent tutoring systems
- numerical simulation
- signal and image processing
- user modelling
- mathematical physics
- mathematical modelling
- neural networks
- operations research
- optimisation
- statistics
- stochastic processes

9.2 Admission Requirements

Candidates for the degrees Master of Science and Doctor of Philosophy will be admitted under the General Regulations.

9.3 Admission Procedure

Candidates seeking admission to the Royal Military College as graduate students should contact the Dean of Graduate Studies and Research and request an Application form and instructions on how to apply. The Application form and corresponding instructions can be found at:

http://www.rmc.ca/academic/grad/forms_e.html.
9.4 Programme Requirements

The Master of Science degree with a specialty in either Mathematics or Computer Science, will be awarded to candidates who successfully complete a programme of studies normally comprised of six term courses plus a thesis. The Master's degree when pursued full-time in the residential programme normally requires two academic years plus the intervening summer to complete. The Doctoral degree will be awarded to candidates who successfully complete a programme of studies normally comprised of at least ten term courses at the graduate level in addition to a thesis.

| MA503       | Optimization Theory And Applications           |
|             | In this course are presented the fundamental concepts, results and numerical methods of optimization. The content is: introduction, mathematical background, mathematical models for optimization, convexity in R^n (Convex sets, convex functions, separation and polarity, extremal structure of convex sets), linear programming (necessary and sufficient conditions of optimality, the duality theorem, the simplex method), convexity and differentiability (gradients, subgradients, directional derivative), geometrical optimality conditions, analytical optimality conditions (Fritz-John optimality condition, Karush-Kuhn-Tucker optimality condition), Lagrangian duality and saddle point optimality conditions, numerical algorithms and their convergence (gradient methods, projected gradient methods, penalty-function methods, modified Lagrangian methods, relaxation methods). |
|             | Lectures - 3 periods per week (one term)       |
|             |                                                 |
MA505  TOPICS IN DIFFERENTIAL GEOMETRY AND APPLICATIONS

Lectures - 3 periods per week (one term)

Credit(s): 1

MA507  NUMERICAL ANALYSIS

Lectures - 3 periods per week (one term)

Credit(s): 1

MA511  TOPICS IN OPTIMIZATION

This course covers topics in optimization such as: Global optimization, Interval Analysis
applied to optimization, Introduction to Optimal Control, Nondifferentiable optimization, etc.

---

**MA513**

GAME THEORY

The main purpose of this course is to present the basic mathematical machinery utilised in the theory of games. The content is: mathematical preliminaries, matrix games, infinite antagonistic games, non-cooperative games, cooperative games, introduction to differential games and applications.

---

**Lectures - 3 periods per week (one term)**

---

Credit(s): 1

---

**MA515**

INTERVAL ANALYSIS

The goal of this course is to present the fundamental notions of interval analysis and its applications to numerical methods used in applied mathematics. Content: The set \( I(\mathbb{R}) \) of bounded real intervals. The set \( I(\mathbb{C}) \) of complex intervals. Interval arithmetic. Interval evaluation and range of real functions. Machine interval arithmetic. Finite convergence. Metric, absolute value and width in \( I(\mathbb{R}) \) and in \( I(\mathbb{C}) \). Interval matrix operations. Computable sufficient conditions for existence and convergence. Interval analysis and zeros of polynomials. Interval analysis and linear equations. Interval analysis and fixed points theory. Interval analysis and differential equations. Interval analysis and non-linear equations. Interval analysis and optimisation problems.
MA517  |  MATHEMATICAL MODELS FOR COMBAT

Lectures - 3 periods per week (one term)

Credit(s): 1

MA525  |  DETERMINISTIC NUMERICAL SIMULATION

Prerequisite: MA507 or its equivalent

Lectures - 3 periods per week (one term)

Credit(s): 1
Prime numbers play an important role in many cryptographic methods. This course studies some of the many algorithms linked to prime numbers: deterministic and probabilistic primality tests, generating large primes, factoring methods. Relevant results from theoretical and computational number theory are developed and discussed as needed. Applications of these algorithms in cryptographic methods are also considered.

**MA527**  | **Prime Numbers and Cryptography**
---|---

Lectures - 3 periods per week (one term) - Laboratory - 1 period per week (one term)

Credit(s): 1

---

**MA529**  | **Multivariate Statistics**
---|---

Simple and multiple regression and extensions, lag structure analysis in the data, non-linear regressions, seemingly unrelated regressions, simultaneous equations model, qualitative response models and factor analysis. Time series analysis, if time permits.

Lectures - 3 periods per week (one term)

Credit(s): 1

---

**MA531**  | **Logic and Its Application to Computer Science**
---|---

This course is an introduction to the notion of formal theories and proofs. The propositional calculus and the predicate calculus will be revisited along these lines. First order theories will be discussed and some generalisations will also be considered, in particular those playing a role in computer science.
Lectures - 3 periods per week (one term)
- -
Credit(s): 1

MA533  |  **PROBABILITY AND DISCRETE-TIME PROCESSES**
--- | ---
Advanced concepts in probability distributions and expectations; generating functions; compound distributions; discrete-time renewal theory; recurrent events, random walk and ruin problems.

Lectures - 3 periods per week (one term)
- -
Credit(s): 1

MA535  |  **STOCHASTIC PROCESSES - I**
--- | ---
Counting processes and compound Poisson processes; continuous-time renewal theory; Markov chains in discrete and continuous time. Discussion of various queuing models.

*Prerequisite: MA533 or its equivalent*

Lectures - 3 periods per week (one term)
- -
Credit(s): 1

MA537  |  **STOCHASTIC PROCESSES - II**
--- | ---
Advanced mathematical modelling of queues; Markov chains and processes, birth-and-death processes, continuous-time renewal theory; Poisson and non-Poisson queues; transient and
steady-state solutions; bulk queues.

**Prerequisite: MA533 or its equivalent**

**Lectures - 3 periods per week (one term)**

Credit(s): 1

**CS501 | ADVANCED TOPICS IN COMPUTER SCIENCE**

This is a reading and tutorial course with topics in computer science selected to complement the student's thesis research.

**Tutorial - 3 periods per week (one term)**

Credit(s): 1

**CS503 | DEVELOPMENT OF SCIENTIFIC SOFTWARE**

Scientific software is defined as software that is computationally intensive. This course looks at the topics dealing with the production of high quality scientific software. Topics will be examined both from the viewpoint of the computing specialist and from the viewpoint of the scientist. As such, this course is of interest to students in computing and students in other disciplines that depend on computationally intensive software. Topics include performance and resources, safety, trustworthiness and confidence, issues in validation and other types of testing, regulatory standards, architecture and design, data design, and long-term evolution and change.

**Lectures - 3 periods per week (one term)**
## CS551 Pattern Recognition And Image Processing

Introduction to the basic mathematical tools and algorithms for image processing by digital computers. Topics covered will include various aspects of image filtering, restoration and enhancement. Principles of deterministic, statistical and syntactic approaches to pattern recognition. Techniques of feature extraction and classification. Scene analysis. Expert system techniques and computer applications will be covered. Students will be expected to complete computer-based projects.

**Lectures - 3 periods per week**  
**Laboratory - 2 periods per week (one term)**  

Credit(s): 1

## CS553 Modelling And Simulation

This course gives a comprehensive treatment of model design and execution for simulation. It reviews the important aspects of a simulation study, including modelling, simulation software, model verification and validation. Study of input modelling, random-number generators, generating random variates and processes, statistical design and analysis of simulation experiments. Highlight of major application areas such as military defence.

**Lectures - 2 periods per week**  
**Laboratory - 2 periods per week (one term)**  

Credit(s): 1

## CS565 Data Base Management Systems

rules, logic programming and object-oriented data bases.

Lectures - 3 periods per week
Laboratory - 2 periods per week (one term)

Credit(s): 1

CS567 APPLICATIONS OF ARTIFICIAL INTELLIGENCE IN COMMAND AND CONTROL

In this course, the fundamentals aspects of command and control will be discussed with a view to using artificial intelligence. In particular, the following aspects will be considered: knowledge-based systems, knowledge representation, intelligent tutoring systems, planning, and constraint programming.

Lectures - 3 periods per week (one term)

Credit(s): 1

CS571 COMPUTER GRAPHICS

This course will cover various mathematical and computational aspects of computer graphics. Algorithms for representing and transforming lines, curves and surfaces. Display files and data structures. Students will be expected to complete computer-based projects.

Lectures - 3 periods per week
Laboratory - 2 periods per week (one term)

Credit(s): 1
CS575  COMPUTER SIMULATION FOR GUIDED WEAPON SYSTEMS

Topics discussed include a review of the basic concepts of classical mechanics and their application to describe flight trajectories. Fundamental problems of missile guidance, measurement of missile motion and analysis of different laws governing the flight of a homing missile. Theory of inertial navigation and applications of inertial guidance. Attitude control, orbit transfer and optimal control of trajectories in space and in atmospheric flight. Pursuit evasion games.

Lectures - 3 periods per week
Laboratory - 2 periods per week (one term)

Credit(s): 1

CS581  FOUNDATIONS OF ARTIFICIAL INTELLIGENCE

This course covers topics in: LISP language: History, introduction to the language: Sexpressions, CONS, CAR, CDR, etc; production and matching: production system, methodology, pattern matching, examples; knowledge representation: definition, overview of knowledge representations, semantic networks, frames, inheritance, conceptual graphs; reasoning: inference, resolution, resolution strategies, nonmonotonic reasoning, knowledge and belief, metaknowledge and metareasoning; and planning: initial state, goals, actions, plans, conditional plans.

Lectures - 3 periods per week (one term)

Credit(s): 1

CS585  SOFTWARE ENGINEERING MATHEMATICS

Propositional logic and predicate calculus. First order theories. Sets, relations and functions. The use of mathematics to specify software and to describe its properties. Hoare triples. The use of assertions in programming. Techniques for checking completeness and consistency. Small practical examples. Introduction to techniques such as Z and VDM.
**CS591**

**Algorithm Analysis**

This course covers advanced topics in the design and analysis of algorithms. In particular, algorithms for parallel computation will be investigated in more detail. The students are expected to read and discuss current material on these subjects. Prerequisite: CSE321A.

---

**CS595**

**Complexity Theory**

This course reviews important results in complexity theory and discusses the following topics: time complexity, space complexity, intractability. Some advanced topics will also be covered in some details: approximation algorithms, probability algorithms, parallel computation, and cryptography.

---

**Lectures - 3 periods per week (one term)**

Credit(s): 1
CS597 | TOPICS IN SOFTCOMPUTING WITH EMPHASIS ON NEURAL NETWORKS

How nature computes with DNA and neural networks. The principles of artificial computing with DNA, genetic algorithms and neural networks. Artificial Neural Networks are studied in some depth; the topics discussed including: single and multi-layer perceptrons, backpropagation networks, self-organising maps, and some of their applications. This course has a practical computing dimension. Students will be introduced to LISP and possibly other computer languages so that they can write their own software implementing the course material. They will also use some commercially available software packages.

Lectures - 3 periods per week (one term)

Credit(s): 1

CS599 | CRYPTOLOGY

Topics covered include: classical cryptosystems; modern block and stream ciphers; Shannon’s information theory; public key ciphers, primality testing, factoring algorithms; digital signatures; unkeyed hash functions and message authentication codes; key distribution and agreement; identification and authentication; pseudo random number generation. Each student will investigate an advanced topic using current research literature.

Lectures - 3 periods per week (one term)

10. DEPARTMENT OF PHYSICS
10. GENERAL INFORMATION

Department Head - Dr. T.J. Racey

Telephone: 613-541-6000 ext 6288
10.1 Programmes Offered

The Department of Physics offers programmes leading to the degrees of Master of Science and Doctor of Philosophy in Physics, with the following fields of specialisation:

- Acoustics and Oceanography
- Space Science
- Materials Science

10.2 Admission Requirements

Candidates for the degrees of Master of Science and Doctor of Philosophy will be admitted under the General Regulations.

10.3 Admission Procedure

Candidates seeking admission to the Royal Military College as graduate students should contact the Dean of Graduate Studies and Research and request an Application form and instructions on how to apply. The Application form and corresponding instructions can be found at:

www.rmc.ca/academic/grad/forms_e.html

10.4 Programme Requirements

The Master of Science degree will be awarded to candidates who successfully complete a programme of studies comprised of a minimum of four term courses at the graduate level, plus a thesis, as approved by the Department of Physics. The number of courses may vary according to sponsor requirements, and up to half of the required courses may be taken outside the Department with the Department's approval.

The Master's degree when pursued full-time in the residential programme normally requires five academic terms or two academic years plus the intervening summer to complete.

The Doctoral of Philosophy degree will be awarded to candidates who successfully complete a programme of studies normally comprised of at least eight courses at the graduate level after the Bachelor's degree, in addition to a thesis.

For both the MSc and PhD degrees, project or thesis work can be integrated into sponsor-oriented projects that can be of direct benefit to the CF.

10.5 COURSE DESCRIPTIONS

PH501  ACOUSTICS PROPAGATION AND MODELLING

A study of the fundamental equations used to describe acoustic propagation in the ocean is
undertaken in the context of military acoustic requirements. The effect of oceanic variability in one, two and three dimensions on acoustic propagation forecasting is evaluated and discussed to better understand the limitations imposed by the environment upon prediction capabilities. The approximations inherent in such models for transmission loss calculation as FACT, Generic Sonar Model, Ray Mode, and Parabolic Equation are studied to gain understanding of the physical principles behind these models and the implicit strengths and weaknesses of each. Through assignments and class projects the student will have an opportunity to work with some of these current acoustic models and to conduct numerical experiments to show some of the characteristics of each model tested. Oceanic factors affecting acoustic propagation which are discussed include temporal and spatial variability of sound speed profiles, interpolation and digitisation of sound speed profiles, calculation of sound speed without using salinity data, reflection characteristics of the ocean surface and bottom, fronts and various kinds of eddy structures. The student is expected to understand the implications of the course and to be able to describe the limitations imposed by the environment on the choice of particular model to predict transmission loss.

**Lectures - 3 periods per week (one term)**

Credit(s): 1

**PH503**  
**ADVANCED OPTICS**

This course will include material taken from the fields of both geometric and physical optics. Ray tracing, matrices, skew rays, optical cavities, gaussian beams and their optics; index of refraction, birefringence, polarisation, optical activity, non-linear optics; interference, coherence, diffraction, Fourier optics, image formation, optical processing.

**Lectures - 3 periods per week (one term)**

- -

Credit(s): 1

**PH505**  
**ACOUSTIC SYSTEM ANALYSIS**

Using a system approach, the student will learn the characteristics and limitations of a number of active and passive acoustic detection and tracking systems. The design, construction and deployment of passive and active acoustic transducers is discussed from
the viewpoint of overall system performance. Fourier methods are introduced so that signal
decomposition in frequency space and in wavenumber space can be described. This leads
ultimately to a discussion of spatial beam forming using such systems as difar, vertical line
arrays, and towed arrays. A study of correlation methods as applied to random noise lead to
a discussion of oceanic ambient noise in both temperate and polar seas and the detection of
signals in noisy environments.

**Lectures - 3 periods per week (one term)**

Credit(s): 1

**PH507** | **REMOTE SENSING**
---|---
This course assesses sensors and platforms used in the remote sensing of the earth, and the
use of data from them to describe the terrestrial and oceanic environments. The physics of
passive and active sensors operating in the visible, infra-red and microwave is discussed, as
are the algorithms necessary to transform sensor data into geophysically meaningful output,
such as land elevation vegetation index, sea surface temperature, wave height and wind
speed. Remote sensing of solid surfaces is discussed to illustrate the applicability of modern
sensor systems or terrestrial environments. Processing and analysis of remotely sensed
imagery is discussed to lead the students to an understanding of how to extract information
on oceanic and terrestrial features and conditions using modern professional computational
techniques. Emphasis is placed on the use of remotely sensed data for tactical and strategic
purposes.

**PH511** | **ELECTROMAGNETIC THEORY**
---|---
Reviews of electrostatics, magnetostatics, Maxwell's equations in vacuum and in matter.
Scalar and vector potentials. Charge conservation, momentum and angular momentum
conservation. Constitutive relations, D(E) and H(B), for linear and non-linear systems,
symmetries. Kramers-Kronig relations. Radiation from localised charges and currents,
Green's function method, Poynting's theorem, radiated power, retarded potentials. Multipole

Lectures - 3 periods per week (one term)
- -
Credit(s): 1

**PH513 ELECTRONIC CERAMICS AND OTHER ELECTROMECHANICAL TRANSDUCTION MATERIALS: PROPERTIES AND APPLICATIONS**

This course presents an understanding of the behaviour of piezoelectric and electrostrictive ceramic materials with particular reference to their use in electromechanical transducers. The properties of other electromechanical transduction materials such as piezoelectric polymers and composites, magnetostrictive materials and shape memory alloys will also be discussed briefly. The use of these materials in acoustic transducers for particular applications such as underwater sonar for submarine detection and mine-hunting, underwater stealth, ceramic motors and actuators and smart structures will be reviewed. Other types of functional ceramic materials will be discussed briefly and these will include: conducting, dielectric, electro-optical, magnetic and superconducting ceramics.

Lectures - 3 periods per week (one term)
- -
Credit(s): 1

**PH515 THERMAL AND STATISTICAL PHYSICS**

PH517  
**Selected Topics In Physics**

The emphasis in this course will be placed on those areas of particular interest to the student as dictated by his or her research topic.

---

PH521  
**Synoptic Oceanography**

A detailed study of the nature and distribution of synoptic scale and mesoscale features of the oceans is made with particular emphasis on the waters contiguous with Canada, including the Arctic Ocean. Modern knowledge and theories of meandering currents, oceanic eddies and fronts are examined using recent scientific literature. Data and imagery from remote sensing satellites are used to identify and examine these features. Data analysis techniques required for such examinations are also presented.

---

**Lectures - 3 periods per week (one term)**

Credit(s): 1
PH531  ASTRODYNAMICS

A review of satellite orbital motion as a Keplerian motion, orbit determination, and orbital manoeuvring. Perturbations to the Keplerian motion-oblate earth (J2 and other terms), thirdbody perturbations (solar, lunar), atmospheric drag, solar-radiation pressure. Techniques to treat perturbations-SP (Special Perturbations numerical methods), GP-(General Perturbations analytical methods) and hybrid methods. Statistical orbit determination using least squares and Kalman filters.

Lectures - 3 periods per week (one term)

Credit(s): 1

PH535  ROCKET PROPULSION

Introduction to rocket propulsion and vehicle dynamics. The basic laws of thermodynamics, thermochemistry and conservation are used to determine ideal motor performance. Effects of vibration, acoustic noise and acceleration on systems during launch are investigated. Emphasis is placed on describing the components and design criteria for liquid, solid and hybrid rockets. Electric, nuclear, and other advanced propulsion systems are also studied.

Lectures - 3 periods per week (one term)

Credit(s): 1

PH537  SATELLITE COMMUNICATION AND NAVIGATION

This course is an introduction to communication between spacecraft and ground stations. Students are introduced to antenna theory: dipole antenna, antenna gain, antenna patterns, directivity and signal strength. The theory is then applied to modulation, transmission, propagation, reception and demodulation of signals between the ground and a satellite. Fundamentals of ionospheric effects, frequency bands, communication lin equations and telemetry are covered. Space based navigation systems are examined. Topics include positioning using RF Doppler and GPS positioning. Precision navigation and surveying, personal communication systems as well as search and rescue systems are also examined.
Satellite tracking is discussed.

**Lectures - 3 periods per week (one term)**

Credit(s): 1

<table>
<thead>
<tr>
<th>PH539</th>
<th>Spacecraft Mission Geometry</th>
</tr>
</thead>
</table>
This course is an introduction to the factors affecting a spacecraft's mission. After a brief review of orbital mechanics with special emphasis on orbital maneuvers and satellite station keeping, the students are introduced to the theory of spacecraft attitude dynamics and kinematics. The theory is then applied to spacecraft attitude stabilization and control, including a brief introduction to the sensors used to measure the spacecraft position and attitude. Earth coverage, the relative motion of satellites, as well as viewing and lighting conditions are discussed in order to illustrate the effects of the spacecraft mission geometry on the overall mission. The process of orbit selection and design will be introduced with special emphasis on constellations, including constellation patterns, coverage, station keeping and collision avoidance. The Analytical Graphics software package, Satellite Tool Kit (STK) will be used to provide a simulation of the spacecraft orbits and mission geometry.

**Lectures - 3 periods per week (one term)**

Credit(s): 1

<table>
<thead>
<tr>
<th>PH541</th>
<th>Surveillance Of Space</th>
</tr>
</thead>
</table>
The course presents an overview of factors involved in the tracking of objects in space. It examines the space environment and EM propagation effects that impact on ground based tracking. It surveys space-time co-ordinates, Keplerian orbits, orbit perturbations and ground track considerations. The course then examines in depth the Analytical Graphics software package STK/PRO and all its associated modules. Included in this are PODS, SKY, IRAF and Streak Detection Algorithms that are being presently used at the Space Surveillance Research and Analysis Laboratory at RMC. The course also examines current topics in space control using the proceedings of research conferences.
PH543  SPACE WEATHER I - SOLAR PHYSICS AND ACTIVITY

This course provides a graduate-level introduction to the physics of the solar outer layers, with concentration on the generation, emergence and evolution of the magnetic field, and its interaction with the solar plasma. This course represents the first half of the space weather curriculum and serves as a basic introduction to the characteristics of stellar atmospheres. Topics: Basic properties of the sun and sun-like stars: bulk characteristics and interior structure; atmospheric structure: photosphere, chromosphere, transition region and corona. Solar magnetic activity: the 22-year cycle; emergence, structure and variability of the solar magnetic field. Solar dynamo: basic principles, mean field dynamo theory, alpha and omega effects. Active regions and sunspots, sunspot classification; field evolution in active regions, magnetic shear, field reconnection, current sheets; prominences, flares and CMEs. Origin, structure and variability of the solar wind. Recent solar observations from ground and space; predictions of solar activity and relation to space weather prediction; comparison of solar activity properties with those of other stars.

PH545  SPACE WEATHER II - THE NEAR EARTH SPACE ENVIRONMENT

This course studies the interplanetary medium and the near-Earth environment from the rigorous perspective of plasma physics. Theoretical topics include: single particle motions in plasmas, plasmas as fluids, waves in plasmas, diffusion and resistivity (magnetohydrodynamics), equilibrium and stability, kinetic theory and nonlinear effects. Applications to the space environment include: the solar wind, the Earth’s magnetic field, Van Allen belts, the South Atlantic Anomaly, aurorae, particles and currents in the magnetosphere, magnetospheric waves, and instabilities and shocks in the magnetosphere.
PH547  SPACE MISSION ANALYSIS
This represents the first half of the space mission analysis and design curriculum. The course consists of lectures and case study assignments covering various aspects of space missions, including systems engineering, propulsion systems, launch vehicles, power systems, thermal control, communication and navigation, ground systems, mission operations, safety, tolerance, risk and failure management.

PH549  SPACE MISSION DESIGN
This represents the second half of the space mission analysis and design curriculum. The students develop the preliminary design of the space and ground segment for a realistic space mission.
**PH551 | Ocean Dynamics**

The physics and mathematics of motion in the ocean will be examined at scales ranging from the microscale to basin scale. The hydrodynamic equations governing fluid motion will be developed from the fundamental laws of physics and examined in various forms to study such phenomena as geostrophic currents, inertial currents, Ekman spirals, barotropic and baroclinic currents, the large-scale, wind-forced oceanic circulation, thermohaline circulation and western intensification. Wave theory for an unstratified ocean will also be covered and will include an investigation of the tides and Rossby, surface gravity, Poincaré and Kelvin waves.

*Lectures - 3 periods per week (one term)*

- -

Credit(s): 1

---

**PH553 | Dynamic Oceanography**

Long waves such as shelf, Rossby, Poincaré and Kelvin waves will be studied for two-layer and continuously stratified fluids. The quasigeostrophic potential vorticity equation will be derived. Barotropic and baroclinic instability of mean flows will be investigated both by doing linear stability analysis and by examining eddy resolving numerical models. Modern theories of the ocean circulation that incorporate the ventilated thermocline and the homogenization of potential vorticity will be covered and compared with observations.

*Lectures - 3 periods per week (one term)*

- -

Credit(s): 1

---

**PH581 | Space Systems**

This course is intended for MA students in Space Policy. Review of the history of space with emphasis on Canadian contributions typical satellite orbits: effects of the environment, satellite function considerations. Satellite systems and subsystems: structure, electrical power, thermal control, propulsion and attitude and altitude control. Systems: sensors, telemetry, surveillance, navigation, meteorology, and remote sensing. Military and scientific
**PH583** | **SURVEILLANCE OF AND FROM SPACE**

This course is intended for candidates for the MA in Space Policy. This course discusses the observation of the earth's solid and liquid surface from space, and the observation of the space environment from the earth's surface and from low earth orbit. Remote sensing systems operating in the visible, thermal infrared and microwave regions are examined. The fundamentals of the orbits of space objects and the methods of tracking them from the ground are presented. Historical, current and future observing systems will be discussed, with a focus on applications important to the Canadian Forces. Bi-weekly computer laboratory sessions will give the student hands-on experience in remote sensing image analysis and interpretation, and in satellite and spacecraft orbit determination and prediction using software tools currently in use within the CF.

**Lectures - 3 periods per week (one term)**

Credit(s): 1

---

**PH585** | **THEORY AND OBSERVATION OF STELLAR ATMOSPHERES**

This course provides an introduction to the physics of stellar atmospheres, including bulk stellar properties, concepts of local thermodynamic equilibrium, excitation and ionization equilibria, radiative energy transport, convective instability, continuous opacity, model stellar atmospheres, and stellar continua. This is followed by a development of the basic tools of quantitative spectroscopy, including concepts of line opacity and line profiles, contribution functions, hydrogen line profiles, stellar abundance determinations, and microscopic and macroscopic velocity fields. The course concludes with a discussion of advanced topics such as stellar magnetic fields, non-LTE, stellar winds, stellar pulsation, and stellar activity including chromospheres and coronae.

11. DEPARTMENT OF CHEMISTRY AND CHEMICAL ENGINEERING

11. GENERAL INFORMATION

Department Head - Dr. K.A.M. Creber

Professor-in-Charge of the Chemical Engineering Programme - Dr. P.J. Bates

Telephone: 613-541-6000 ext 6271

Fax: 613-542-9489

http://www.rmc.ca/academic/chem/grad/index_e.html

11.1 Programmes Offered

The Department of Chemistry and Chemical Engineering offers the Master's and PhD degree programmes with specialty fields in Chemistry, Chemical and Materials, Environmental, and Nuclear, in Engineering or Science.
The Masters and Doctoral Programmes with the specialty field of Environmental Engineering are offered jointly with the Department of Civil Engineering. A sub-committee of the two departmental graduate studies committees administers this programme.

The Department's graduate research programme is closely affiliated with and supported by numerous DND agencies and directorates. Many thesis topics are offered as a result of this collaboration and are arranged between the sponsor and the Department of Chemistry and Chemical Engineering.

Current areas of activity with associated sponsors include among others: testing of Nuclear Biological Chemical protective equipment (DSSPM, DRDC), investigating nuclear emergency response techniques, safety and radiation fields at high aircraft altitudes (DGNS, J3NBC, DCGEM, DRDC), studying integrated health monitoring techniques of aircraft engines and developing Expert Systems (DASEng, AMDU, DREA, DRDC), fuel cells (DRDM), electrochemical power sources including submarine work (DMEE, DRDA, DGIEM, DGMEM, DASP, DRDC), investigating corrosion resistance of coatings and nondestructive evaluation techniques (DASEng), characterizing armoured materials and silicon carbide ceramics (DRDC), developing dye penetrants for use in search and rescue operations (DRDC, Search and Rescue), developing new procedures for environmental site assessment and remediation (DGE, DIAND), developing novel analytical techniques to support environmental engineering studies (NWSO), applying biotechnology methods (bioremediation phytoremediation) for treatment of contaminated soils (DGE, DISU, DIPM, Env. Canada) and studying new approaches for ecological risk assessment (DGE, NWSO).

Other areas of activity may be arranged within the broad spectrum of expertise in the Department of Chemistry and Chemical Engineering. The specialty fields of research are Chemistry, Chemical and Materials Science, Environmental Science, Nuclear Science, Chemical and Materials Engineering, Environmental Engineering, and Nuclear Engineering.

Graduate research may be pursued in the following areas:

**Chemical And Materials Science / Chemical And Materials Engineering**

- carbons as adsorbents
- air quality control
- life support systems
- pigments for visible radiation therapy of diseases
- development and testing of NBC protective gear
- decontamination, detection and monitoring chemical agents
- electrochemical power sources and batteries
- hydrogen production, purification and storage
- fuel cell development for applications in submarines and military bases
- liquid fuels purification processes
- catalytic chemical reactions
- explosives, propellants and pyrotechnics
- aerosol and vapour dispersion
- terminal ballistics
- artificial intelligence applications
- corrosion of alloys in aircraft frames, marine systems and armoured materials
- calculation of phase diagrams from thermochemical data
- non destructive evaluation, materials man-agement and expert systems
- polymer systems
- composite materials
• ceramics, high temperature superconductors, solid electrolytes and solid lubricants
• aircraft engine wear monitoring (quantitative filter debris analysis)
• analytical chemistry and radiochemistry
• chemical kinetics
• chemical thermodynamics of new materials and advanced technologies
• surface chemistry
• x-ray crystallography
• vibrational, absorption and fluorescence spectroscopy
• synthesis of therapeutic agents
• solid state chemistry of inorganic materials

Environmental Science / Environmental Engineering

• environmental assessment; impact and risk assessment
• remediation technologies
• environmental standards and guidelines
• monitoring programmes and pollution prevention
• environmental analytical chemistry - especially pertaining to effective field testing
• biotechnology - bioremediation and phytoremediation
• sanitary engineering
• toxic water management
• water resources management
• site remediation
• subsurface contaminant transport
• ecological risk assessments

Nuclear Science / Nuclear Engineering

• radiochemistry and neutron activation analysis
• radiation effects on materials
• neutron radiography and radioscopy
• nuclear reactor analysis and design
• fuel cycles and fuel management
• neutron and gamma bubble dosimetry
• nuclear fuel and fission product release behaviour response
• artificial intelligence applications to nuclear systems
• health physics and radiation protection
• nuclear accident response
• nuclear radiation detection and measurement

11.2 Admission Requirements

Candidates for the degrees Master of Science, Master of Applied Science, Master of Engineering and Doctor of Philosophy will be admitted under the General Regulations.

11.3 Admission Procedure

Candidates seeking admission to the Royal Military College as graduate students should contact the Dean of Graduate Studies and Research and request an application form and instructions on how to apply. The application form and corresponding instructions can be
11.4 Programme Requirements

The Master's of Engineering degree will be awarded to candidates who successfully complete a programme of studies normally comprised of eight term courses at the graduate level plus a project.

The Master of Science degree or the Master of Applied Science degree will be awarded to candidates who successfully complete a programme of studies normally comprised of five lecture courses at the graduate level plus a thesis. The degree when pursued full-time in the residential programme normally requires five academic terms or two academic years plus the intervening summer to complete.

The Doctor of Philosophy in Environmental, Nuclear, and Chemical and Materials Science or Engineering, will be awarded to candidates who successfully complete a programme of studies normally comprised of at least eight lecture courses, at the graduate level, plus a thesis.

11.5 COURSE DESCRIPTIONS

**CC501 | CHEMICAL AND NUCLEAR ENGINEERING COMPUTATIONS**

The topic of this course are selected to suit applications in Chemical and Nuclear Engineering. The central theme of the course is the mathematical formulation of various engineering problems. Ordinary and partial differential equations, boundary-value problems, matrix operations and various mathematical modelling and simulation techniques are covered. Numerical optimisation techniques are introduced. Analytical and numerical methods of solution are used, both workstation and/or micro-computer being employed for the latter.

Lectures - 3 periods per week (one term)

Credit(s): 1

**CC502 | POLYMER WELDING AND JOINING**

Technologies used to weld and join thermoplastic and thermoset parts are reviewed. Topics include mechanical (self-taping screws, boss design, snap-fits), chemical (adhesives) and thermal (ultrasonic, vibration, hot-plate, resistance and laser welding) assembly techniques. Theoretical and practical aspects of these techniques are covered. The course consists of a series of lectures, class projects and laboratories using pilot scale welding equipment.
**CC503  SPECIAL TOPICS**

The topics of this course are adjusted to the specific requirements of the candidates. For instance, typical complementary topics for Master of Nuclear Engineering candidates would include corrosion, electrochemistry, water chemistry, certain separation processes such as ion exchange, filtration, absorption, solvent extraction and water desalination, and, for certain candidates, chemical equilibria and nonequilibrium thermodynamics.

---

**CC509  NUCLEAR REACTOR HEAT TRANSFER**

Advanced topics in conduction, forced convection, natural convection and boiling heat transfer applied to nuclear fuel and nuclear reactor design; heat transfer characteristics of various coolants, moderators, nuclear fuels and reactor materials; problems in thermal design of nuclear power reactors.

---

**Lectures - 3 periods per week (one semester)**

Credit(s): 1

---

**Lectures - 3 periods per week (one term)**

Credit(s): 1
The radiation emitted from natural and manmade sources is reviewed and the units and terminology employed in radiation measurement and protection are outlined. The biological effects of radiation are covered by introducing elementary biology and reviewing studies and experience with radiation exposures. The risks of employing radiation are considered and the recommendations of various groups and reports on radiation standards are consulted. The exposure, absorbed dose, dose equivalent, and their rates are calculated for various situations and the principles employed in minimising these levels are discussed. Present activities of organisations working with and responsible for radiation are reviewed.

**Lectures - 3 periods per week (one term)**

Credit(s): 1

**CC513 CORROSION ENGINEERING - DIAGNOSIS OF CORROSION AND CORROSION TESTING**

The course consists of a review of corrosion-related chemistry and electrochemistry with an introduction to corrosion-related failure. Diagnostic elements of corrosion phenomena, analysis of failures, dissection of observations and simple on-site tests are discussed. Laboratory corrosion testing, electrochemical techniques and corrosion monitoring are also covered.

**Lectures - 3 periods per week (one term)**

Credit(s): 1

**CC515 NUCLEAR DETECTION AND MEASUREMENT**

This course is presented as a series of lectures and accompanying laboratory experiments. Radiation, their sources and interactions with materials, are reviewed. The principles employed in radiation detection are described with emphasis on survey techniques and nuclear electronics. Gas-filled detectors (ionisation, proportional, Geiger), scintillation and semiconductor detectors are discussed, followed by neutron detectors and gamma-ray
spectroscopy. The principles of operation, characteristics, types and applications are indicated for each detector method. Factors affecting detectors such as statistics, background and shielding are included.

---

**Lectures - 3 periods per week (one term)**

Credit(s): 1

---

**CC517 SHIELDING FOR NUCLEAR ACTIVITIES**

The shielding required for equipment employing radioisotopes likely to be encountered by military personnel (radiography, calibration sources, tritium lighting, nuclear reactors, weapons explosions, etc.) is examined. The principles of operation are outlined with emphasis on the radiations emitted, and thermal and blast effects on personnel and equipment in the case of weapons explosions. The safety measures taken in the design and operation of this equipment are also studied. Radiation shielding is covered by determining the radiations, source geometry, energy spectrum, build-up factors and shielding purpose encountered in typical applications. Shielding calculations are then made for specific situations by various methods, including the latest software codes.

---

**CC519 THERMODYNAMIC COMPUTATIONS IN MATERIALS ENGINEERING**

Using a comprehensive database and a suite of related user friendly programs, the principles of the computation of thermodynamic equilibrium in multi-component multiphase systems by numerical minimisation of the Gibbs energy will be developed using a comprehensive database and a suite of related user developed friendly programs. Interpretation of the variety of resultant phase diagrams produced from these computations will form part of the course. Computer assisted solutions of problems pertaining to applications such as corrosion, ceramic reinforcement of alloys, chemical vapour deposition of specialised materials, and leaching of nuclear waste will draw attention to data estimation for solution phases where measured properties may be lacking. The computing system used
in this course is F*A*C*T*.

Lectures - 3 periods per week (One Term)

Credit(s): 1

CC521  INTRODUCTION TO NONDESTRUCTIVE EVALUATION

Principles, equipment, techniques and standards for various non-destructive tests will be covered. Radiography, magnetic penetrants, other penetrants, ultrasonics, eddy current and other more specialised techniques will be included. Lectures - 3 periods per week (one term)

Lectures - 3 periods per week (one term)

Credit(s): 1

CC523  NUCLEAR REACTOR ENGINEERING

The course is introduced by discussing future world energy requirements. The first part of the course then covers interaction of radiation with matter, detection and shielding, radiation safety and reactor classifications, components and materials. In the second part, operation and control of nuclear reactors are described, including reactor kinetics and dynamics, control devices, poisons and chemical shim. Reactor safety, risk analysis, reactor accidents, radiation from effluents and licensing are covered.
The following safety aspects of nuclear power reactors are discussed, including reactor licensing and regulation in Canada and in other countries, basic principles of reactor safety, engineered safety features in nuclear power reactors, reactor safety analysis, reliability and risk assessment; reactor accidents at civilian power plants (Chernobyl; Three Mile Island and elsewhere) and in nuclear-powered vessels, radiation dose calculations; nuclear emergency response, and fission product release and severe core damage phenomena.

**CC527**  **NUCLEAR REACTOR KINETICS AND DYNAMICS**

The nuclear reactor at transient state is studied in this course, first through the point kinetics model for which solutions of the resulting equations for various reactivity variations are calculated. The feedback effects and the various reactivity coefficients due to the temperature and void fraction, among others, are then covered. This leads to the introduction of the control theory applied to feedback systems, and to the analysis of stability conditions. Advanced kinetics theory elements are presented, including non-point theory models, space-time models, adiabatic and quasistatic approaches, modal and nodal formalisms. Analytical and numerical solutions are introduced and applied in cases such as safety analyses.

**Pre-requisite - CC523 Nuclear Reactor Engineering**

**Lectures - 3 periods per week (one term)**

Credit(s): 1
Radiological techniques utilising X-ray, gamma ray and neutron radiation will be covered. Their sources, interactions and imaging will be studied. Light alloys such as found in aircraft and film imaging will be emphasised. Other techniques such as real-time imaging, data analysis and tomography will be compared and the evaluation of image quality and sensitivity will be studied. Radiometry, diffraction and X-ray fluorescent techniques will be briefly covered. Radiation safety will also be addressed.

Lectures - 3 periods per week (one term)

Credit(s): 1

CC533 | NUCLEAR FUELS ENGINEERING
--- | ---
This course covers the physical, chemical, mechanical and nuclear properties of nuclear fuels. The fuel cycle is examined from mining, fabrication, and enrichment through to reprocessing and disposal. The behaviour of the fuel as it resides in the nuclear reactor is considered including its thermal and chemical characteristics. Fission product behaviour and fuel defect mechanisms are studied for normal reactor operation, and severe fuel damage phenomena are described for nuclear reactor accident conditions.

Lectures - 3 periods per week (one term)

Credit(s): 1

CC537 | SITE REMEDIATION
An introduction is given to the techniques available for removing chemical and nuclear contamination from polluted sites. The course will focus on currently available methods, but will also address techniques under development for the remediation of soil, air and groundwater. Topics will include bioremediation, phytoremediation, thermal remediation, containment and stabilisation, and chemical extraction methods. A study of the legislative framework and costs associated with site remediation will be an important part of the course. Emphasis will be placed on assessing the feasibility and relative advantages of the available methods for a given site. This course will be taught using a combination of lectures, case studies and seminars.

**Lectures - 3 periods per week (one term)**

Credit(s): 1

---

**CC539 APPLIED ANALYTICAL CHEMISTRY**

This course will cover environmental sampling methods, quality assurance principles and applications, and statistics as they pertain to analytical chemistry. Environmental sampling will include soil, water, and biota sampling applied to environmental assessment, risk assessment and research. Quality assurance and statistics topics complementing the environmental sampling methods, as well as from the perspective of a commercial laboratory setting will be discussed. Methods of analysis, both field and laboratory, will be described for the most common environmental contaminants, and this information will be used to discuss the applicability and limitations of data thus obtained. A hands-on training session with field equipment for the analysis of PCBs, TPH and inorganic elements will be included.

---

**CC541 ENVIRONMENTAL TOXICOLOGY AND RISK ASSESSMENT**

This course will review the environmental and human health effects of the major classes of environmental stressors, both proven and putative. Quantitative risk assessment, and prioritisation of action on its basis, will be key considerations, as will the development of abatement criteria and actual abatement strategies. The course will include technical aspects
of risk assessment and will consider the practical realities facing the practitioner and policy maker.

---

**Lectures - 3 periods per week (one term)**

Credit(s): 1

**CC543 ATMOSPHERIC DISPERSION AND MICROMETEOROLOGY**

This course examines two major areas: the atmospheric boundary layer (ABL) and the behaviour of aerosols and gases within the ABL. Specific topics include the composition and structure of the earth's atmosphere within the ABL, transport processes and balances, temperature and moisture distributions, stability and turbulence, properties of atmospheric gases, boundary layer flows and similarity theory. General modelling approaches are also discussed. The second area, aerosols, includes the transport of chemicals in the ABL, size distributions and removal processes of atmospheric aerosols, and aerosol dynamics. Specific aerosol systems will also be considered, and can be adjusted somewhat to meet students' interests, such as the possible aerosol release during nuclear reactor accidents or the dispersion of military aerosols. Use will be made of appropriate computer models.

---

**Lectures - 3 periods per week (one term)**

Credit(s): 1

**CC545 ADVANCED TOPICS IN ORGANIC CHEMISTRY**

This course will examine the application of structural elucidation and synthetic methods to organic chemistry and the fundamental mechanistic concepts of organic reactions. The functions of enolate chemistry, functional group interconversions and pericyclic reactions in multi-step synthetic schemes will be introduced, as well as, the effects of the physical and electronic properties of the reactants and the solvent on reaction mechanisms. Case studies involving detailed studies of organic reactions and processes of industrial and economic importance will be used throughout this course. All of the concepts that are introduced in this course have been selected for students with prior knowledge of the structure and reactivity
of organic compounds.

Lectures - 3 periods per week (one term)

Credit(s): 1

**CC547**  **ARTIFICIAL NEURAL NETWORK MODELLING**

This course will cover a range of artificial intelligence topics with examples of how they may be applied to engineering problems. Specific topics may be tailored to meet students' needs, but will be drawn from artificial neural networks, fuzzy logic, genetic algorithms, knowledge-based systems, case-based reasoning and expert systems. Applications will cover such areas as prediction, classification and control problems as well as knowledge elicitation and representation for improved knowledge reuse. Students will be required to solve problems using either commercial software packages or their own code. Although the mathematical foundations of the various topics will be covered, emphasis will be placed on their applications to engineering problems (especially within a chemical, nuclear or materials engineering environment).

Lectures - 3 periods per week (one term)

Credit(s): 1

**CC549**  **TERMINAL BALLISTICS**

This course will examine the engineering considerations involved in warheads designed to attack armoured fighting vehicles, light armoured and unarmoured vehicles, aircraft, hardened shelters and dismounted personnel. Topics will include warhead designs for kinetic energy, shaped charge, fragmentation, and blast effects, as well as penetrator/target interactions with a variety of armour types (steel, aluminium, ceramic and composite). Wound ballistics will also be addressed. Use will be made of appropriate computer models.
**CC551**

**PROPELLION IN GUNS AND ROCKETS**

This course discusses the characteristics and design considerations of solid rocket fuels and gun propellants. Specific topics include grain design, composition and additives to control burning rates, the chemistry and thermodynamics of primers, igniters and propellants, generation and distribution of chamber and bore pressures, form factors and equations of state, barrel wear and heat transfer, pressure waves, liquid gun propellants, light gas and electric guns, combustible cartridge cases, and muzzle gases. Use will be made of appropriate computer models.

---

**CC553**

**ENVIRONMENTAL TRANSPORT PROCESSES**

This course will examine the transport of vapour, liquid and particulate contaminants in the environment, with special emphasis on transport within the atmosphere and soil. Specific topics will include diffusive transport, advective-dispersive transport, the constitutive transport equation, mass transport coefficients, dispersion modelling, transport in porous media, and the development and assessment of transport models.

---

<tbody>
<tr>
<td>This course will examine current, and specific, environmental issues in both science and engineering. Topics will be drawn from the areas of contamination, site remediation, ecological risk assessment, landfill techniques, groundwater contamination, human health and the environment. The course will be co-taught by professors from RMC and Queen's University and will also feature speakers who are experts in the topic areas. Students will be required to develop specific topics in both written and oral format and will also be required to, participate fully in all discussions. It is anticipated that all students will benefit from the multidisciplinary content of the course and will be better prepared to appreciate environmental problems from a broad perspective. It should be stressed that, although a broad range of topics will be covered, students will be expected to demonstrate specific knowledge of their area of focus.</td>

**Lectures - 3 periods per week (one term)**

Credit(s): 1
CC559  **TERMINAL BALLISTICS 2 - IMPACT MECHANICS**

This course will examine the mechanics and dynamics of the impact of armour materials (steel, aluminium, ceramics, glass and composites) in various geometric configurations by long rod and spin stabilised penetrators, shaped charge jets and explosively-formed projectiles. The course material will expand upon subject matter covered in CC549 Terminal Ballistics. Specific topics include physical and material considerations for both penetrators and targets, non-penetrating impacts, the attack of semi-infinite targets, plate penetration and perforation, and behind armour effects. Use will be made of appropriate computer codes.

Lectures: 3 periods per week (one term)

Credit(s): 1

CC561  **EXTERNAL BALLISTICS**

This course will examine the flight of projectiles and missiles. Specific topics will include compressible flow and the generation of shock waves, projectile stability for finned and spun projectiles, range enhancements, such as base bleed and rocket assist, vacuum trajectories and aerodynamic drag, the effects of wind, rotation of the earth and coriolis forces. The point mass, modified point mass and six degree of freedom models will also be addressed in the context of small and large calibre rounds. Use will be made of appropriate computer codes.

Lectures - 3 periods per week (one term)

Credit(s): 1

CC563  **POLYMERS IN ENGINEERING APPLICATIONS**

The course consists of the following topics: polymer thermodynamics, viscoelasticity, yield and fracture, reinforced polymers and polymer processing. Engineering applications will be illustrated throughout the course.
The following topics on the theory and applications of nuclear and radiochemistry are studied: atomic structure and nuclear models, the mass energy relationship, nuclear transformations and reactions, natural and artificial radioisotopes, interaction of radiation with matter, and radiation detection and measurement. Research industrial and medical applications and safety considerations of radioisotopes are discussed including radiotracers, activation analysis, radiometric analysis and radiation processing.

Lectures - 3 periods per week (one term)

Credit(s): 1

The nuclear fuel cycles are studied from the mining to the ultimate disposal of the spent fuel, including the enrichment processes and the reprocessing techniques, from a point of view of the decision-making processes and the evaluation of the operational and economical consequences of these decisions. For the steps within the fuel cycles, the methods of determining the associated costs, in particular those relevant to the disposal of nuclear wastes, and the overall fuel cycle costs are described. Burn-up calculations are performed for the dwelling time of the fuel within the reactor core. The objectives and merits of in-core and out-of-core fuel management are presented. In-core fuel management for Light Water Reactors (LWR) and for CANDU Pressurised Heavy Water Reactors (PHWR) is analysed in detail, for the refuelling equilibrium as well as for the approach to refuelling equilibrium. The course also covers fuel management for thorium-fuelled CANDU reactors and other advanced fuels such as MOX containing plutonium from discarded nuclear warheads, and DUPIC (Direct Use of PWR fuel in CANDU reactors). Optimisation methods used in fuel management are examined along with the most important computer codes.
Lectures - 3 periods per week (one term)

CC569 NUCLEAR, BIOLOGICAL AND CHEMICAL DEFENCE

The principles and characteristics of nuclear weapons will be discussed and related to the physical (thermal, blast) and nuclear radiation (initial, residual, TREE, EMP) effects on humans, structures and equipment. Particular attention will be paid to distance-yield relationships, the distribution of fallout, the characteristics and pathology of acute whole-body radiation, physical and biological dosimetry and radiological survey. The course will include an examination of the composition and biological action of classical nerve, blood, choking and blister agents, as well as detection and decontamination methods and antidotes available. Individual and collective protection measures will also be covered. Such biological agents as bacteria, viruses and rickettsia as well as mid-spectrum agents to include toxins, venom and bioregulators will be addressed.

Lectures - 3 periods per week (one term)

CC571 EXPERIMENTAL DESIGN, MODEL DEVELOPMENT AND PARAMETER ESTIMATION

The methodology for developing efficient experimental plans for accurate model development will be studied. Multi-variable linear models will be used to illustrate the fundamental concepts of regression analysis including parameter estimation, parameter significance, estimating the error in predictions, residual variance and other general concepts in the analysis of variance. The extension of regression analysis from linear models to non-linear models will then be examined. Model transformations and the effect on error will be presented. Special problems associated with non-linear regression such as parameter correlation, and error estimation will then be discussed using concrete examples.
The course begins with a review of the radiations, their interactions with matter and the health effects from acute and chronic doses, and follows with a brief coverage of basic dosimetry and regulations. Radiation shielding is then introduced with examples and problems solved with the software Microshield. The origins and classification of nuclear waste into low-level, medium-level and high-level waste are studied, with emphasis given to the back end of the nuclear fuel cycle (inpool storage and reprocessing). The course also covers topics such as labelling, packaging and transportation of nuclear materials. The various methods presently used and in development for the safe disposal of nuclear waste are then covered, both for the low-level and medium-level waste, and, in particular, for the high-level waste and the spent nuclear fuel. In the latter case, the associated engineering problems are presented in terms of heat transport, radiation shielding and long-term integrity of the containers (corrosion resistance). The deep inground ultimate disposal of high-level waste (salt deposits and the Canadian concept of burial inside granitic plutons within the Canadian Shield) is given special attention, along with other potential methods such as disposal at the bottom of abyssal trenches in oceans, transmutation with fusion reactors and even outer space disposal. In contrast, the retrievable and the surface storage technologies are covered, with emphasis given to the Canadian approach presently implemented at various nuclear sites. The course concludes with a discussion of economical, political and sociological aspects of the nuclear waste management question, including aspects such as ethics and public perception.

**CC573**  **NUCLEAR WASTE MANAGEMENT**

**Lectures - 3 periods per week (one term)**

Credit(s): 1

The dynamical nature of the space environment is examined. The environmental factors of vacuum, temperature, radiation, atomic oxygen, micrometeoroids and space debris are discussed. The impact of this environment on materials (i.e. metals, ceramics, polymers and composites) is considered including an examination of the requirements, design and comparison of various materials used in space. A research project typically involving laboratory experiments and related to materials effects in the space environment also complements this course.

**CC575**  **MATERIALS IN THE SPACE ENVIRONMENT**
**CC577  EXPLOSIVES AND EXPLOSIONS**

The course examines the chemistry and parameters of explosives, historical and modern explosives, future development, initiation and propagation of explosions; effects of explosions in gaseous, liquid and solid media; manufacturing aspects and military applications of explosives. The thermodynamic analysis of gas mixtures at elevated temperatures using advanced computer techniques is also covered.

---

**CC579  CHEMISTRY OF ENERGETIC MATERIALS**

This course examines the production processes, chemical properties and reactions of energetic materials, including primary and secondary explosives, propellants and pyrotechnic formulations used in military applications. The topics of safety in handling and transportation, as well as appropriate classifications and regulations will also be discussed. Criteria for sensitivity, and techniques for predicting and measuring the thermal yields and stability are examined. The course will afford a brief review of thermochemistry for those students who might require it.

---

**Lectures - 3 periods per week (one term)**

- Credit(s): 1
This course reviews the current state of the art in the purification and storage of fuels for fuel cell power systems. Purification by both chemical and physical methods is covered. Storage techniques include; cryogenic, high-pressure, adsorption on solids such as carbon and nano-materials, chemical and metal hydrides and newer novel methods such as microspheres. The course will normally be adjusted to the specific requirements of the students.

Lectures - 3 periods per week (one term)
- -
Credit(s): 1

This course will review the current state-of-the-art in hydrogen production from hydrocarbons, biomass and alcohols. Topics will cover the design of fuel processing systems for fuel cell power systems. The key technical knowledge required for the design and modeling of fuel processors will be described. The technical challenges and criteria for evaluating the performance of fuel processor systems will be examined.

Lectures - 3 periods per week (one term)
- -
Credit(s): 1

This course will cover the different methods of producing catalysts using traditional techniques (thermal degradation and calcination) as well as advanced techniques (ball milling, Pulsed Laser Deposition (PLD), PECVD). Different strategies used to effectively disperse the catalysts onto commercial supports will be discussed briefly. The second part of the course will cover techniques used to characterize catalysts such as granulometry, porosimetry and X-ray diffraction (XRD). Surface characterization of catalysts using electron beams (SEM, EDX and XPS) and ions beams (SIMS, RBS) will also be studied. More emphasis will be placed on either the preparation or characterization of catalysts according to the
CC587 MECHANISM, KINETICS AND MODEL DEVELOPMENT

The rational design of chemical reactors requires not only a means to calculate rates of species production/consumption but also, a qualitative understanding of the fundamentals of the reaction. The course examines classical methodologies for inferring mechanism from kinetic data (Langmuir-Hinshelwood approach) and the generation of corresponding rate expressions for calculating reaction velocities. The limitations of the Langmuir-Hinshelwood approach are discussed. Other methodologies are presented for deriving rate expressions based upon experimental kinetic data. The tools of surface science, as a means to elucidate reaction mechanism, are reviewed.

Lectures - 3 periods per week (one term)

Credit(s): 1

CC589 MATERIALS AND MANUFACTURING METHODS FOR FUEL CELLS

This course reviews the current state-of-the-art of fuel cell development in terms of material developments and manufacturing methods. Students will become familiar with the key components of a fuel cell, the function of each component, and the key material properties required for the component.
### CC591  CERAMIC ENGINEERING

The classification of ceramic materials is first presented, followed by bonding and common crystal structures, which are related to the physical and mechanical properties of these various classes of ceramics. Various processing methods, including powder processing, consolidation, sintering and densification, are covered. The application topics will be adjusted to suit the needs and interests of the candidates. The course includes a small project and laboratory work.

### CC593  ADVANCED NUCLEAR REACTOR PHYSICS

This course continues the neutronics for the nuclear reactor at steady state seen in course CC523 Nuclear Reactor Engineering with the coverage of the multi-neutron energy group diffusion equation, then covers the multi-region models including the unit cell calculations. Transport theory is then explained and the integrodifferential Boltzmann equation is solved analytically and numerically. The integral transport equation is then studied, and the first collision probability methods (such as PN) are seen. The adjoint equations are seen, followed by the perturbation theory applied to the neutronics calculations. The course concludes with the Monte-Carlo probabilistic techniques applied to the reactor calculations.

**Prerequisite:** CC523

This course describes the use of materials in nuclear reactors and covers topics in: nuclear energy and materials; material properties; material thermodynamics; primary components and reactor materials (fuel, structural, pressure tubes, control and safety system materials); fundamental effects of radiation damage on materials; engineering implications (creep, corrosion, hydriding and aging phenomena).

Lectures - 3 periods per week (one term)

Credit(s): 1

This course describes the thermalhydraulics of nuclear reactors and covers topics in: reactor neutronics; heat generation and production; thermal conduction; convective heat transfer in single phase; heat transfer (liquid metals, gases, fins); heat transfer with phase change; fluid flow; physics of two-phase flow; pressure drop in nuclear reactors; hydrodynamics; heat transport system; safety aspects of CANDU reactors.

Lectures - 3 periods per week (one term)

Credit(s): 1

The explosion of applied analytical chemistry has quietly revolutionized society over the past decades. Advances in medical diagnosis and treatment, forensics, environmental management, electronics, and most forms of production quality control rely heavily on analytical chemistry. In the present course, the fundamental principles of core analytical techniques will be examined, including atomic and molecular spectroscopy and spectrometry, electrochemistry, chromatography and other separation methods.

12. DEPARTMENT OF CIVIL ENGINEERING

12. GENERAL INFORMATION

Department Head - J.H.P. Quenneville

Telephone: 613-541-6000 ext 6391

Fax: 613-541-6218

http://www.rmc.ca/academic/civil/grad/index_e.html

12.1 Programmes Offered

The Department of Civil Engineering offers the Master's and PhD degree programmes in Engineering, with specialty fields in Structures and Geotechnical Engineering. The Masters and Doctoral Programmes with the specialty field of Environmental Engineering are offered jointly with the Department of Chemistry and Chemical Engineering. A sub-committee of the two departmental graduate studies committees administers this programme. The details are contained in the calendar entry of the Department of Chemistry and Chemical Engineering.

Graduate research may be pursued in the following areas:

- Structural Engineering
- Geotechnical Engineering

12.2 Admission Requirements

Candidates for the degrees Master of Applied Science, Master of Engineering and Doctor of Philosophy will be admitted under the General Regulations.

12.3 Admission Procedure

Candidates seeking admission to the Royal Military College as graduate students shall contact the Dean of Graduate Studies and Research and request an Application form and instructions on how to apply. The Application form and corresponding instructions can be found at:
12.4 Programme Requirements

The Master of Engineering degree is comprised of eight term courses at the graduate level plus a project.

The Master of Applied Science degree will be awarded to candidates who successfully complete a programme of studies normally comprised of five term courses at the graduate level plus a thesis. Depending upon the mathematical background of the candidate, a course in mathematics may be required. The Master's degree when pursued full-time in the residential programme normally requires two academic years plus the intervening summer to complete.

The Doctor of Philosophy will be awarded to candidates who successfully complete a programme of studies normally comprised of at least three lecture courses at the graduate level, in addition to those taken at the Master's degree, plus a thesis.

Six copies of the candidates thesis are required by this department.

12.5 Course Descriptions

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CE501</td>
<td>Structural Dynamics And Response Of Structures</td>
<td>Response of single and multi degree of freedom systems, when subjected to dynamic forces or base acceleration, are studied. Strength, ductility and energy dissipation characteristics of typical structural systems are examined. Development of response spectrum for elastic and inelastic systems, dynamic analysis and design criteria are covered.</td>
</tr>
</tbody>
</table>

Lectures - 3 periods per week (one term)

Credit(s): 1

CE503 | Principles Of Structural Stability

Topics include:

- 1. for frames: torsion constant, geometric stiffness matrix, eigenvalues and eigenvectors, stability stiffness matrix, bowing stiffness matrix, superposition for axially loaded members having transverse loads, total potential energy and frame instability.
- 2. for plates: bending stiffness matrix, geometric stiffness matrix, critical loads in plate structures.
CE505  STRENGTHENING AND REPAIR OF CONCRETE STRUCTURES

This course provides an overview of methods that can be applied to assess, rehabilitate or strengthen damaged or under strength concrete structures. Deterioration mechanisms that affect concrete structures will be covered, including severe environmental and loading conditions. Approaches and test methods to inspect and assess existing concrete structures will be investigated. Repair strategies and techniques will be considered for concrete as a construction material and for reinforced and prestressed concrete structures. Strengthening techniques will include the application of fiber reinforced polymer materials. Protective measures suitable for extending the life of concrete structures and structural health monitoring will also be discussed.

CE507  ADVANCED REINFORCED CONCRETE DESIGN

Topics include concrete technology; a review of ultimate strength design procedures; ultimate strength of concrete frame and slab structures; ultimate strength of concrete bridges; concrete members subjected to combined loadings; precast, pretensioned-concrete structures; current research in reinforced concrete. Lectures - 3 periods per week (one term)
The basic methods and computational techniques used to design multi-storey buildings will be discussed using case studies where appropriate. Topics will include classification, history and social-environmental implications of tall buildings, structural systems; architectural and structural design processes; analysis and design of components in the conceptual, preliminary and final design stages; use of computers in multi-storey building design.

Lectures - 3 periods per week (one term)

Credit(s): 1

The course content focuses on the behaviour and design of timber structures. Topics included: wood as a material, design of members (bending, tension, compression), connections, new manufactured wood products, glulam beams and arches, shearwalls and diaphragms, timber bridge decks, inspection and problems encountered in timber structures.

Lectures - 3 periods per week (one term)

Credit(s): 1

This course includes the study of the ductile and brittle failure modes of connections in timber structures for the various fasteners and direction of loading. Specific topics covered are: European Yield Model, Lantos group effect theory, proposed wood brittle failure mode design equations. The analysis and design of both timber and steel components in a connection are presented.
**Prerequisite:** CE511 or an equivalent

*Lectures - 3 periods per week (one term)*

Credit(s): 1

**CE521 ADVANCED PAVEMENT DESIGN**

Topics include vehicle loading; sub-grade soils; unbound aggregates; rheology of bitumens; bitumenaggregate mixtures; analytical design methods; deterioration and condition evaluation; strengthening and overlay design; minimum total transport cost; pavement management strategies; road transport investment and highway deterioration models; concrete pavements; stabilisation.

*Lectures - 3 periods per week (one term)*

Credit(s): 1

**CE525 BRIDGE ENGINEERING**

This course is intended to give the basic knowledge in bridge engineering including bridge design, construction and management. Topics in the introduction will cover problems of basic bridge conception and selection of bridge micro location, environmental consequences of bridge construction and aesthetics of bridges. Design loads, load factors and load combinations based on actual Codes will also be included. The main part of the course will focus on important topics in superstructure and substructure design and analysis, including concrete, steel, timber and composite bridges of short, medium and long span. Some topics in design and construction of special bridges (military bridges, movable bridges, etc.) will also be given. Recent developments in bridges (continuous and integral bridges, bridges which include modern FRP materials, etc.) will be given. Finally, basic topics in bridge management including bridge maintenance, capacity rating, evaluation and rehabilitation of existing bridges will be introduced. Throughout the course examples will be given including those of good design and those that failed. Students will be expected to work on a term design project.
CE527 | ADVANCED NUMERICAL METHODS IN CIVIL ENGINEERING

The course is a follow up of two undergraduate courses of numerical analysis (CEE317 & CEE319) and is intended to upgrade the learning of modelling civil engineering applications using numerical procedures. Topics will cover the solutions of systems of equations, the finite difference and finite element method. Lectures will be supplemented with student presentations and computer work. Students are expected to perform spreadsheet programming.

Lectures - 4 periods per week (one term)

Credit(s): 1

CE531 | PRINCIPLES OF SOIL MECHANICS

This course examines the physio-chemical properties of soils and the effect of these factors on such soil properties as plasticity, compaction, swelling and permeability. Concepts of shear strength and volume change in soils and their application to a range of engineering problems. The course will also study of the origin, formation and special problems of the natural soil deposits of Canada. An advanced study of the laboratory testing of soils.

Lectures - 4 periods per week (one term)

Credit(s): 1
## CE535  ADVANCED FOUNDATION ENGINEERING

Advanced studies of the following topics: Site investigation; principles of foundation design, shallow and deep foundations; soil dynamics and machinery bases; tunnels; instrumentation and construction techniques.

**Lectures** - 3 periods per week (one term)
- -

Credit(s): 1

## CE537  SLOPE STABILITY AND EARTH RETAINING STRUCTURES

This course focuses on the study of natural slopes, cut slopes and constructed embankments; classification of earth and rock movements; field investigations and instrumentation; corrective and control measures. Also studied is the design of earth retaining structures and excavations.

**Lectures** - 3 periods per week (one term)
- -

Credit(s): 1

## CE539  GEOSYNTHETICS IN GEOTECHNICAL ENGINEERING

Topics include: types of geosynthetics and manufacturing processes; properties and test methods; methods of analysis and design for geosynthetics used for separation, filtration, soil reinforcement, erosion control and liquid/hazardous waste containment.
CE541  ADVANCED TOPICS IN CIVIL ENGINEERING

The topics of this course are adjusted to the specific requirements of the candidates. Typical complementary topics for this course would include, but are not be limited to, advanced composite materials, fracture mechanics of wood structures, bridge engineering, advanced treatment and environmental remediation processes, seismic design of earth structures, the effects of blast material behaviour on structures, advanced topics in groundwater modelling.

Lectures - 3 periods per week (one term)
Credit(s): 1

CE551  FINITE ELEMENT METHOD

This course is an introduction to engineering and finite element analysis. Topics include: direct approach and variational formulation; displacement functions and the equilibrium method; outline of some aspects of physical and geometrical non linear problems. The course will introduce applications to different problems depending on student interest and research work. Lectures - 3 periods per week (one term)

Lectures - 3 periods per week (one term)
Credit(s): 1

CE571  WATER AND WASTEWATER TREATMENT PROCESSES

The course examines the principles and application of the physical, chemical and biological treatment of wastewater including aspects of soil systems, stabilization ponds, the activated
sludge process, anaerobic and aerobic digestion, oxygen transfer, the treatment and disposal of sludge, quantity and quality analysis, sedimentation, thickening flotation, centrifugation, filtration, coagulation and flocculation, porous membrane techniques, ion exchange, absorption and disinfection. Laboratory exercises designed to illustrate some of the basic fundamentals will also be carried out. Lectures - 3 periods per week; Laboratory - 2 periods per week (one term)

**Laboratory exercises designed to illustrate some of the basic fundamentals will also be carried out.**

**Lectures - 3 periods per week; Laboratory - 2 periods per week (one term)**

Credit(s): 1

---

### CE577 **ENVIRONMENTAL CHARACTERISATION AND MONITORING**

This course provides an overview of current practice in environmental characterization and monitoring. Lectures presenting the material are augmented by equipment demonstrations and field exercises when opportunities arise from current research projects. Topics covered include: Statistical considerations of environmental sampling and monitoring; subsurface characterization protocols and technologies; sampling and monitoring of surface water, storm/sewer water and atmospheric environments and; health and safety considerations at contaminated sites.

**Lectures - 3 periods per week; Laboratory - 2 periods per week (one term)**

Credit(s): 1

---

### CE583 **ENVIRONMENTAL IMPACT ASSESSMENT**

The course will cover the following subjects: General concepts of the environmental impact of engineering projects, laws and regulations, ecological parameter evaluations and weighting factors, assessment techniques such as Batelle, McHarg and Corridor, case studies.
CE585 | WASTE MANAGEMENT
This course deals with the generation, transport and treatment of solid and hazardous wastes in industrialized communities. Problems associated with waste disposed of by traditional means will be investigated. The design of engineered landfills for both domestic and hazardous material will be covered. Alternatives to landfill will be studied and discussed in terms of their social and environmental impact.

CE587 | WATER CHEMISTRY
Topics include: aspects of chemical kinetics; rate laws and reaction mechanisms; chemical thermodynamics; equilibrium of single and multiprotic acids; pC pH diagrams; the carbonate system; coordination chemistry, inorganic and organic complexes; redox reactions; heavy metals and other pollutants' behaviour in the environment. At the end of the course, the student should be able to calculate or to estimate the equilibrium concentration of various inorganic and some organic chemicals in water exposed to reagents in solid, liquid, and gaseous forms (e.g., soils, atmosphere). The student should also be able to understand the operating principles and data requirements of chemical equilibrium calculation programs.

**CE595  **

**DESIGN AND ANALYSIS FOR BLAST EFFECT ON STRUCTURES**

The aim of this course is to introduce the structural engineer to the phenomena of blast waves and how they interact with structures. The course will cover the fundamentals of explosives and the properties and characterization of their blast waves and scaling laws. The interaction of the blast wave with the target structure will be examined in detail. Structural response to the blast wave will be studied from a single element as well as holistic structure perspective. SDOF dynamic methodologies for element analysis will be used to examine element response. Analysis and design of critical elements (beams and columns) for a blast environment will be studied. The concept of progressive collapse will be examined including current methodologies for designing to preclude it. Students will be introduced to a variety of texts, papers and numerical tools that define the state of the art in this rapidly evolving area of study. Threat-risk based vulnerability assessment techniques will be introduced as a means to examining existing infrastructure for suitability in a blast environment. Students in the course will complete a series of assignments and presentations as well as a major paper during the course.

---

Credit(s): 1

---

**CE599  **

**INTRODUCTION TO UNSATURATED SOILS**

This course examines current theories of unsaturated soils. Topics include: Fundamental principles of unsaturated soils, unsaturated stress and flow phenomena, laboratory measurement of unsaturated parameters including suction, suction-water content relationships, shear strength and hydraulic conductivity, and numerical modeling of unsaturated soils applications. Course work includes assignments, design projects and seminars.

13. DEPARTMENT OF ELECTRICAL AND COMPUTER ENGINEERING

13. GENERAL INFORMATION

**Department Head** - D. Bouchard

**Graduate Committee Chair** - D. Al-Khalili

Telephone: 613-541-6000 ext 6404

Fax: 613-544-8107

http://www.rmc.ca/academic/elec/index_e.html
13.1 Programmes Offered

The department of Electrical and Computer Engineering offers the Master’s and Doctoral degree programmes in Engineering, with specialty fields of Electrical Engineering, Computer Engineering, and Software Engineering.

This Department's graduate research programme is closely affiliated with and supported by DND research labs, directorates and agencies. There is also ongoing collaboration with government laboratories, private companies, and other universities in various research areas.

Graduate research may be pursued in the following areas:

**Electrical Engineering:**

- information theory: coding and neural networks
- digital signal processing
- error correcting codes
- digital communications
- radar studies: microwave integrated circuits
- design; radio wave propagation, antennas,
- microwave engineering, electromagnetic scattering and modelling
- automatic control systems: analysis, design and simulation
- instrumentation and measurement systems
- power electronics and control of electric drives
- target tracking and data fusion
- optimal and sub-optimal control systems robotics
- power system: analysis, control and auto-mation
- VLSI, testability

**Computer Engineering/software Engineering:**

- high speed data acquisition
- microcomputer systems
- expert systems
- digital systems
- integrated circuits: engineering and design automation
- computer communications
- real time software design
- robotics algorithms
- software quality and process improvement
- software development and maintenance
- object-oriented analysis and design
- distributed systems and security

13.2 Admission Requirements

Candidates for the degrees Master of Applied Science, Master of Engineering and Doctor of Philosophy will be admitted under the General Regulations.

13.3 Admission Procedure
Candidates seeking admission to the Royal Military College as graduate students should contact the Dean of Graduate Studies and Research and request an Application form and instructions on how to apply. The Application form and corresponding instructions can be found at:

www.rmc.ca/academic/grad/forms_e.html.

13.4 Programme Requirements

The Master of Engineering is comprised of at least ten lecture courses plus a project. The Master of Applied Science degree will be awarded to candidates who successfully complete a programme of studies normally comprised of six lecture courses at the graduate level in addition to a thesis. The Master’s degree when pursued full-time in the residential programme normally requires two academic years plus the intervening summer to complete. The Doctoral degree will be awarded to candidates who successfully complete a programme of studies normally comprised of ten lecture courses at the graduate level in addition to a final thesis.

13.5 Course Descriptions

**EE501** | **AN INTRODUCTION TO THE THEORY OF STATISTICAL COMMUNICATIONS**

Formulation of the communications problem as a stochastic process; probability and random variables; expectations; moments; characteristic function; multi-variate distributions; stationarity and the ergodic theorem; ensemble and time averages. An introduction to optimum detection; the sampling theorem and efficient transmission of message sequences.

---

**Lectures - 3 periods per week (one term)**

Credit(s): 1

**EE502** | **APPLIED RESEARCH IN ELECTRICAL AND COMPUTER ENGINEERING**

This course is normally taken by students in the Master of Applied Science Program in Electrical, Computer or Software Engineering. The course provides an introduction to the primary and secondary sources of information in the literature of the associated disciplines. The students will also be exposed to the specific applied research groups within the Department, their techniques, and their specific application of the scientific method.

The students will conduct in-depth research in a specific topic area related to their field of study. A member of the Department Faculty will supervise this investigation through directed study. The Student will be required to communicate research ideas in writing though academic papers and proposals, and verbally through presentations and seminars. Standards for academic discourse and publication will be emphasised in the assigned papers and

**Lectures - 3 periods per week (one term)**

Credit(s): 1
**EE507  LINEAR FEEDBACK CONTROL SYSTEMS**

The design of feedback controllers for linear continuous systems, quadratic performance measures and the matrix Riccati equation; pole placement and dynamic compensation, state estimation and decoupling, sensitivity. Use will be made of the digital computer in the design studies.

**Lectures- 3 periods per week (one term)**

Credit(s): 1

**EE509  THEORY AND HARDWARE OF DIGITAL SIGNAL PROCESSING**

Introduction to DSP; Z Transforms; Discrete Fourier Transforms; Sampling; Finite Impulse Response filters; Infinite Impulse Response filters; FFT algorithms; FIR and IIR filter structures; Power spectral estimation; Analysis and implementation of algorithms on DSP hardware. Optional topics include Phase locked loops and Multi-rate digital signal processing

**Lectures: 3 periods per week plus laboratory and project (one term)**

Credit(s): 1

**EE511  DIGITAL SIGNAL PROCESSING**

The fast Fourier transform and its computer implementation; spectral estimation; analytic signal; multi-dimensional signal processing; digital filters, signal detection and estimation; Kalman filters; linear predictive coding; adaptive receivers.
**EE513  TOPICS IN ELECTRICAL ENGINEERING**

The course consists of formal lectures and the study and discussion of research papers appearing in the current literature. Students will be expected to participate in the presentation of the lecture material. Topics chosen will be by arrangement with the department.

**EE515  NUMERICAL METHODS FOR ELECTROMAGNETICS**

Numerical methods for solutions of problems in Electromagnetics with application to static, quasistatic, and high frequency fields. Introduction to essential features of method of moments, finiteelement method, finite-difference method, method of lines, field-matching and modematching techniques, transmission-line matrix method and spectral-domain approach: Fourier and Hankel transforms, Green's functions in multilayered media. Applications to problems in Microwave Circuits and Antennas.

as it pertains to cryptography.

**Prerequisite: EE501**

**EE523 MOBILE MULTI-SENSOR SYSTEM INTEGRATION**

This course covers the fundamentals of inertial navigation systems (INS) and the integration with global positioning systems (GPS). The performance characteristics of different types of navigation sensors, their calibration procedures and the stochastic modeling of their errors are discussed. The computation of the position, velocity and attitude components of a moving platform in the 3D space with respect to certain reference frame is studied. The course also covers the INS/GPS integration using both Kalman filter and artificial intelligence techniques. Applications are mostly related to car navigation.

**Lectures - 3 periods per week (one term)**

Credit(s): 1

**EE525 POWER QUALITY IN ELECTRIC POWER SYSTEMS**

Power quality terms and definitions, voltage sags and interruptions and techniques to reduce their effects, fault clearing, transient overvoltages, long-duration voltage variations, power system harmonics, methods for reducing and controlling harmonics, power quality benchmarking and monitoring, wiring and grounding methods, and power quality in distributed generation.
EE527  ENGINEERING HUMAN-COMPUTER INTERACTION

EE529  MICROWAVE ENGINEERING AND SYSTEMS
Review of basics, transmission lines theory, other transmission media, matching, S-matrix, passive microwave components and devices, microstrip transmission media and circuits, CAD techniques for microwave devices design and optimisation, microstrip antennas, microwave generation, time and frequency domain measurements using modern network analysers, microwave communications systems and subsystems.

EE531  TARGET TRACKING - ESTIMATION, IDENTIFICATION AND DATA FUSION
The primary goal of the course is to enable students to design Kalman filters and to learn enough about the derivations to modify, extend or adapt the filtering algorithms as required.
in given tracking applications. The topics included are: controllability and observability; modelling through identification techniques; target motion analysis (TMA) in two and three dimensions; estimation of linear and non-linear systems; computational considerations and alternatives formulations; manoeuvre detection and correction; adaptive estimation; passive target tracking; multi-sensor data fusion; and single and multiple target tracking in clutter.

Lectures - 3 periods per week (one term)

Credit(s): 1

EE533 CODING THEORY FOR THE CORRECTION OF ERRORS

Shannon’s theorem for digital communication channels, random coding bound. Block codes, number of correctable/detectable errors, encoding/decoding complexity, bounds for the bit-error-rate. Linear block codes, generator matrix, dual code, parity check matrix, coset decoding, weight distribution. Hamming codes, dimension, minimum distance, decoding, asymptotic behaviour. Reed-Muller codes, dimension, minimum distance, asymptotic behaviour. Cyclic codes, generator polynomial, parity check polynomial, encoding. Finite field theory. BCH bound for minimum distance, Reed-Solomon codes, decoding up to the BCH bound, Berlekamp-Massey algorithm. Reed-Solomon code for the correction of burst. Conventional codes, encoding state and trellis diagrams, catastrophic encoder, viterbi decoding, sequential decoding.

EE539 VARIABLE SPEED CONTROL OF ELECTRIC MACHINES

DC machine control, Variable speed control, variable-voltage inverter drive, pulse-width modulated voltage/current source inverter drive. Motor drives: induction motor, permanent magnet motors, stepper motors and switched reluctance motors: Design of vector control systems. Flux and torque estimation methods, Rotor and stator flux oriented control, Sensitivity to parameter stat and parameter adaptation, PWM current control techniques,
Direct Torque Control and Speed/position estimation.

**Lectures - 3 periods per week (one term)**

Credit(s): 1

**EE541  REAL-TIME DIGITAL COMPUTER CONTROL SYSTEMS**

The design of feedback controllers for linear, discrete time system controlled by a digital computer, quadratic performance measures; pole placement; compensation; decoupling constrained control; methods for controller realization.

**Lectures - 3 periods per week (one term)**

Credit(s): 1

**EE543  RADAR BASICS AND APPLICATIONS**

Review of electromagnetic waves basic concepts, antenna basics, linear antennas, arrays, computer aided analysis and design techniques application to antennas, radar basics and fundamentals, radar antennas, polarization concepts in radar, radar cross section, weather effects on radars, radar techniques (SAR, MTI, etc.), applications (weather radars, SBR, OTHR).
**EE545  MICROCOMPUTERS: ARCHITECTURE AND APPLICATIONS**

Survey of available microprocessors; selection of components for specific applications; internal organization; memories, I/O ports; system requirements; programming considerations; interrupt structures; peripheral devices and controllers. Application to the designs of multiprocessor systems.

**Lectures - 3 periods per week plus laboratory (one term)**

Credit(s): 1

**EE547  INSTRUMENTATION**

**Lectures - 3 periods per week (one term)**

Lectures - 3 periods per week (one term)
- -
Credit(s): 1
**EE561  POWER ELECTRONICS**

Characteristics of semiconductor power control devices; analysis and design of circuits and systems for energy control and conversion, with applications to converters, inverters, choppers and cycloconverters; closed-loop control of electromechanical systems.

**EE563  TOPICS IN COMPUTER ENGINEERING**

Consists of formal lectures and the study and discussion of research papers appearing in the current literature. Students will be expected to participate in the presentation of the lecture material. Topics chosen for discussion will be by arrangement with the department.

**EE565  COMPUTER NETWORKS AND PROTOCOLS**

Review of queuing theory as it applies to networks: capacity assignment. OSI model for computer networks. Analysis of protocol, routing and flow control. Multiple access techniques. Local area networks. The students may be asked to review recent papers and do small projects.
EE571  ADVANCED TOPICS IN POWER ENGINEERING

A course dealing with topics on power systems operation, control and protection. Topics include reaction power control: compensators, voltage regulation and power factor correction for symmetrical and asymmetrical loads; effects of reduced voltage on the operation and efficiency of electric loads; distribution loss evaluation and optimisation; fault current limiting and effects of reduced fault duration upon power system components; control of interconnected power systems.

EE573  OBJECT-ORIENTED ANALYSIS AND DESIGN

This course consists of an introduction to Object-Oriented Analysis (OOA) and Design (OOD). The course material covers managing complexity using data and procedural abstraction, encapsulation, hierarchies, and composition of problems into classes and objects. The concepts of overloading, multiple inheritance and polymorphism are introduced. The analysis, design and implementation phases of software development are considered in the context of an iterative object-oriented development methodology. Design patterns are introduced as context for higher-level reuse. Course assignments will provide an introduction to object-oriented modeling languages, and will provide experience with implementation using a standard object-oriented programming language.
**Lectures - 3 periods per week (one term)**

Credit(s): 1

---

**EE575  INTRODUCTION TO THE THEORY OF NEURAL NETWORKS**

The course focuses on neural networks as trainable dynamical systems with self-organization properties. The most important classes of neural networks along with their respective learning paradigms are studied in detail. These include Hopfield nets, feed forward networks, recurrent networks and networks allowing for unsupervised Hebbian and competitive learning. Emphasis throughout the course is placed on applications to signal processing, pattern recognition and optimisation problems. The student will be required to complete at least two mini projects on specific topics dealing with the applications of neural networks to engineering problems.

---

**Lectures - 3 periods per week (one term)**

Credit(s): 1

---

**EE577  NEURAL NETWORKS APPLICATIONS TO POWER SYSTEMS**

This course examines the state-of-the-art in artificial neural network technology for electric power systems. The course is composed of two parts. The first part provides an overview of artificial neural networks (including both supervised and unsupervised network models), their principles of operation learning rules, advantages and limitations. In the second part, specific applications of neural networks in power systems are examined, including system load forecasting, security assessment, power system planning, system fault diagnosis and control of power systems.

---
EE579  COMPUTER SYSTEMS AND NETWORK SECURITY

Topics will include computer security concepts, terminology, seminal research, operating systems and issues of network administration related to computer security. Network attack, intrusion techniques and the detection of such attacks and intrusions are explored. Lectures: 3 periods per week plus laboratory and project (one term)

Lectures: 3 periods per week plus laboratory and project (one term)

Credit(s): 1

EE581  CANADIAN FORCES INTENSIVE COURSE IN SOFTWARE ENGINEERING

Credit in EE581 is awarded to students who successfully complete all requirements of the Canadian Forces Intensive Course in Software Engineering (CFICSE) and additionally successfully complete a paper on a topic approved by the instructor. The CFICSE is a four-week course primarily on the management of software projects. Topics include life cycle models for projects, refining a life cycle into a coherent process for structured or object-oriented techniques, use and/or tailoring of common software standards, software development plans, software metrics to estimate and measure product and process quality, and high risk areas in software processes.

150 lecture hours plus paper

Credit(s): 1

EE583  SOFTWARE REQUIREMENTS ENGINEERING

- 3 periods per week (one term)

Lectures - 3 periods per week (one term)

Credit(s): 1

EE585  |  REAL-TIME SOFTWARE DESIGN AND IMPLEMENTATION

The interaction between requirements and design. Alternative approaches to design. Domain specific design methods. Tools that support specific methods. Focus on a particular method in the real-time embedded software domain, and on a supporting tool intended to be used in a host/target development environment. Software structures and architectures. Techniques for the specification of module behaviour. Use of mathematical techniques. Concurrency, distribution and performance issues. Iteration and rapid prototyping. Reusable designs and components. Patterns and frameworks. Automatic code generation. Transferring models to targets. Controllability and observability of models on both host and target.

Lectures - 3 periods per week (one term)

Credit(s): 1

EE587  |  TOPICS IN SOFTWARE ENGINEERING

The study and discussion of research papers appearing in the current literature. Students will be expected to participate in the presentation of the material. Topics chosen for the course will be by arrangement with the Department.

Lecture and tutorial: 3 periods per week (one term)
EE589  PERSONAL SOFTWARE PROCESS AND PROGRAMMING STANDARDS

Lecture: 1 hour per week - laboratory: 2 hours per week (one term)

Credit(s): 1

EE591  SOFTWARE ENGINEERING

Consideration and use of engineering principles to design and implement cost-effective, reliable software. Current software requirements methodologies and design practices, documentation standards, software project management, verification and validation techniques, software security considerations and computer human interfaces.

Lectures - 3 periods per week (one term)

Credit(s): 1

EE597  COMPUTER SYSTEM MANAGEMENT AND MAINTENANCE

**EE599**  
**COMPUTER SYSTEM VERIFICATION AND VALIDATION**

Lectures - 3 periods per week (one term)  
Credit(s): 1

Formal techniques: proving systems correct, checking consistency and completeness. Inspections and reviews. Unit/module testing. White box and black box testing. System integration and testing. Tool support for testing. Faults vs. failures. Verification of implementation against both requirements and design. Techniques for safety critical and secure systems. Trustworthiness vs. reliability. Timing analysis and verification. Safety analysis. Fault tolerant systems. Quality assurance and reliability.

14. DEPARTMENT OF MECHANICAL ENGINEERING

14. GENERAL INFORMATION

Department Head - Col (Ret'd) J.G. Lindsay
Graduate Committee Chair - Dr D.R. Poirel
Telephone: 613-541-6000 ext 6369
Fax: 613-542-8612
http://www.rmc.ca/academic/mech/index_e.html

14.1 Programmes Offered

The department of Mechanical Engineering offers the Master's and PhD degree programmes in Mechanical Engineering. Specific research interests of faculty members are described in the department and faculty member's web pages.

14.2 Admission Requirements

Candidates for the degrees Master of Applied Science (MASc), Master of Engineering (MEng) and Doctor of Philosophy (PhD) will be admitted under the General Regulations.

14.3 Admission Procedure

Candidates seeking admission to the Royal Military College as graduate students should contact the Dean of Graduate Studies and Research and request an Application form and instructions on how to apply. The Application form and corresponding instructions can be found at:

www.rmc.ca/academic/grad/forms_e.html

14.4 Programme Requirements

The Master of Engineering degree is comprised of eight term courses at the graduate level plus a project. The Master of Applied Science degree will be awarded to candidates who successfully complete a programme of studies normally comprised of five term courses, at the graduate level, plus a thesis. Normally, at least one of the term courses will be in
mathematics.

The Doctoral degree will be awarded to candidates who successfully complete a programme of studies normally comprised of eight courses at the graduate level in addition to a thesis. Graduate courses taken during the Master’s degree can be included in the eight courses.

14.5 Course Descriptions

<td>ME505</td>
<td>Finite Element Method</td>
<td>Introduction to discretization techniques for solving engineering problems. Both element and global force-displacement equations are developed using both the variational and direct stiffness methods. Discussion focuses on various modeling techniques and their underlying mathematical formulations. Modeling procedures are set within a Computer Aided Design construct, using both 2D and 3D models.</td>
</tr>
</tbody>
</table>
ME507  GAS TURBINE ANALYSIS

Building on earlier Thermodynamics and Gas Turbine studies, this course covers topics such as: off-design performance, component matching, variable geometry, and design optimisation. In this course, which applies to air, land and sea applications, students will analyse and model ideal and real engines and cycles. Depending on the particular interests and needs of the students, other topics may be addressed, e.g., engine controls, engine health monitoring, and materials. The lectures are typically supplemented by assigned problems, computer exercises, and laboratory experiments.

Lectures - 3 periods per week (one term)

Credit(s): 1

ME509  GAS TURBINE PERFORMANCE

The main lecture and tutorial portion of this course exists only during the two-week period of the Gas Turbine Performance Short Course offered biennially (even numbered years) in May-June. The short course covers the main engineering issues that determine the design and performance of gas turbines. Operational and maintenance aspects of aircraft propulsion are related to the fundamentals of gas turbine technology. Recent technological developments and future advances in the field are described. Graduate engineers who have successfully completed the Gas Turbine Performance Short Course may obtain credit in ME509 by undertaking a further series of approximately 14 graduate level lectures and an examination offered for this purpose by the Department in any one of the key areas of Aero-thermodynamics, Internal Aerodynamics, Advanced Materials, Combustion, or Controls.

Lectures: see above text

Credit(s): 1

ME511  ADVANCED ENGINEERING DATA ANALYSIS AND EXPERIMENTAL DESIGN
This course examines the practical use of a variety of statistical techniques, including least squares analysis, factor analysis, and analysis of variance to analyze engineering data. Emphasis is placed on how to use quantitative measures to design experiments to extract the maximum amount of information from the minimum number of experiments. Case studies relevant to the students will be examined.

**Lectures - 3 periods per week (one term)**

Credit(s): 1

---

**ME513 FLUID DYNAMICS - VISCOS FLOW**

Advanced topics in fluid mechanics. Basic continuum mechanics, analysis of the stress and velocity gradient tensors, vorticity, introduction to the theory of transition and turbulence. Evaluation is based on assignments, one final exam and a student review (written and presented by student) of selected current scientific publications.

---

**ME517 FLUID DYNAMICS - COMPRESSIBLE FLOW**

One-dimensional flow, normal and oblique shocks, effects of friction and heat transfer; subsonic and supersonic two-dimensional flow, small perturbation theory; hodograph, method of characteristics, axially symmetric flow; unsteady one-dimensional flow; boundary layer interactions.

The lectures are supplemented by problems and laboratory exercises.
Lectures - 3 periods per week (one term)

- 

Credit(s): 1

ME521  RADIATION HEAT TRANSFER

The thermal radiation process as described by: electromagnetic wave theory; emissivity behaviour, specular and diffuse; reflection materials characteristics, thin films, surfaces and media; radiative interchange among grey surfaces separated by participating and by nonparticipating gases and flames; solar radiation with atmospheric characteristics; collectors, flat panel and concentrating; space vehicles; solar power generation; solar houses.

Lectures - 3 periods per week (one term)

- 

Credit(s): 1

ME527  HEAT TRANSFER II

This course consists of review of the fundamental and auxiliary laws applying to heat transfer; the solution of conduction heat transfer problems in steady and transient state, including heat sources by analytical, numerical, graphical and analogue methods for steady and fluctuating boundary conditions.

The lectures are supplemented by problems and laboratory exercises which depend heavily on the use of digital computers.

Lectures - 3 periods per week (one term)

Fatigue mechanisms, cumulative damage analysis, cycle counting techniques and fatigue life prediction are investigated with an emphasis on metals. Stress concentration and surface finish effects, computer simulation and analysis of fatigue behaviour is included as are fracture mechanics, stress intensity factors, crack growth relationships, fracture toughness and failure mechanisms and fatigue and fracture of welded details. Many design applications and examples are given. Lectures - 3 periods per week (One Term)</td>
</tr>
</tbody>
</table>
ME537  AIRCRAFT STRUCTURES AND MATERIALS

The lecture and tutorial portion of this course exists only during the two week period of the AERE Structures Short Course offered biennially (odd numbered years) in May-June. The basic principles used in the design, use and maintenance of aircraft structures are discussed including the topics: manufacturing, loads, stress analysis, finite elements, metallic materials, composite materials, fatigue, fracture mechanics and corrosion. The requirement is to conduct independent studies on the topics and to complete an extensive problem set as the examination.

Credit(s): 1

This course is part of the Aircraft Structures and Materials Course.

Credit(s): 1

ME539  MECHANICAL BEHAVIOUR OF ADVANCED MATERIALS

This course continues the study of engineering materials that covers plastics, ceramics, composites and specialty alloys. The mechanical properties, uses, manufacturing and processing are outlined together with the effects of temperature, environment, failure mechanisms and prevention. The course builds on MEE433 and includes supplementary lectures, extra assignments, and a project to be submitted in report format and presented to the class.

<td>ME541</td>
<td>MECHANICAL VIBRATION</td>
<td>A second course designed to follow-up an undergraduate course in Systems Dynamics and/or Mechanical Vibration. Systems with two degrees of freedom are used to review basic principles and methods. The concepts are then extended to multi-degree-offreedom systems, to continuous systems and to the use of numerical methods of solution. Lagrange's method is introduced (or reviewed, depending on the candidates) and used in formulating more complex problems. An introduction to finite elements completes the course. Lectures are supplemented by problems, modelling assignments and computational assignments requiring the digital computer.</td>
</tr>
<tr>
<td>ME543</td>
<td>ADVANCED DYNAMICS OF PHYSICAL SYSTEMS</td>
<td>This course considers the mathematical modelling and derivation of the equations of motion of mechanical and electro-mechanical systems using both Newtonian and Lagrangian methods. The response of such systems to random inputs in both the time and frequency domain are studied in depth. This course is an extension of MEE445 and includes a detailed computer simulation of the specific system.</td>
</tr>
<tr>
<td>ME545</td>
<td>DESIGN OF FEEDBACK CONTROL SYSTEMS</td>
<td>This course is intended for students who either did not take or took very little control theory</td>
</tr>
</tbody>
</table>
as undergraduates. Laplace transforms and system modelling are prerequisites.

The material is covered under the following main topics: performance specification, stability criteria, techniques of feedback control and state variable description and analysis.

The examples and problems assigned are closely related to hardware in use in the C.F. with hydraulic and pneumatic controllers. Extensive use of the digital computer is made in the application of classical tools such as root-locus, time and frequency response, and state analysis.

---

**Lectures - 3 periods per week (one term)**

Credit(s): 1

---

**ME549  TRIBOLOGY**

This course is concerned with the study of interacting surfaces in relative motion. Among the topics considered are: surface topography, contact mechanics, theories of friction, wear processes, surface coatings, boundary lubrication, hydrodynamic lubrication, elastohydrodynamic lubrication, bearing design, experimental methods. Emphasis is placed on the tribological solution of a wide range of engineering problems and applications.

---

**Lectures - 3 periods per week (one term)**

Credit(s): 1

---

**ME551  STATE-SPACE CONTROL**

This course is an introduction to state-space analysis and control. The materials covered include the following topics: State-space representation of physical systems, relation between transfer function and state-space, controllability and observability, pole placement, optimal control, parameter estimation and observer design, and advanced topics in modern control applications. In this course the software MATLAB/SIMULINK is intensively used.
**ME553**  
**CASE STUDIES OF OPTIMAL CONTROL APPLICATIONS**

A reading course where the student will study the methods used, the results obtained and the gains achieved through the optimal control of certain applications. The readings are chosen to illustrate the following topics:

1. Liapunov's Stability Criteria;
2. Discrete form of the principle of optimality and dynamic programming;
3. Continuous form of the principle of optimality, Pontryagin's Maximum principle (minimum time and minimum energy);
4. Optimal Control of Linear Quadratic Regulators.

**Prerequisite: ME551**

---

**ME555**  
**COMBUSTION PROCESSES**

This course introduces the physical and chemical concepts involved in combustion systems. Among the topics considered are: chemical equilibrium, kinetics of combustion reactions, flame structure and propagation, ignition, stabilization and blowout, and explosion and fire hazards. The combustion characteristics of gas turbines, Diesel and spark-ignition engines are briefly examined to illustrate the basic concepts. The lectures are supplemented by problems and by laboratory exercises.
**ME557**  
**PROPELLSION ENGINES**

This course considers the thermodynamic and combustion processes involved in the design and operation of spark-ignition, Diesel, and gas turbine engines. Some of the topics included are: modelling of engine processes, combustion chamber design, fuel systems, fuel characteristics and performance, origin and control of pollutants, supercharging, unconventional engines, and alternative fuels.

The lectures are supplemented by problems and laboratory exercises.

---

**ME559**  
**FUNDAMENTALS OF AEROELASTICITY**

Aeroelasticity is the discipline that deals with the interaction of elastic structures and aerodynamic loads. The main objective of this course is to provide the student with knowledge of fundamental principles in aeroelasticity; some typical applications are also discussed. A review of dynamical systems concepts is first undertaken, followed by an introduction to unsteady linear and nonlinear aerodynamics. Basic aeroelastic phenomena are then introduced leading to a detailed analysis of a number of common aeroelastic problems such as flutter and gust response. In the last part of the course nonlinear aspects are discussed and exemplified by limit cycle oscillations and chaotic dynamics.
### ME561  |  Aerodynamics Of Turbomachines

Principles of operation of radial, axial turbines and compressors and dramjets; cascade theories and their application to design; off-design performance estimation; matching of compressors, turbines and ducts; performance of integrated systems.

The lectures are supplemented by problems and laboratory exercises.

---

### ME567  |  Aircraft Performance

This course continues the analysis and methods used in the evaluation of aircraft flight performance parameters from the aircraft design specifications. Topics covered will include the determination of flight ceiling, range and endurance, climbing and manoeuvring flight, takeoff and landing parameters for turbine powered aircraft. Velocity hodographic presentations and energy state methods, manoeuvre envelope and wind effects will be analysed. The course builds on MEE467 to include supplementary lectures and extra assignments.

---

### ME589  |  Advanced Instrumentation

After developing the generalised transfer function for first, second and third-order sensors, specific transducers are studied. Applications of accelerometers, rate sensors, and different force transducers are emphasised. Hall-effect devices, laser techniques, x-rays and proximity sensors are utilised in various measurement scenarios together with the appropriate data.
acquisition system. The PG student will participate in seminars and develop a major design project.

\textit{Lectures - 3 periods per week (one term)}

Credit(s): \textbf{1}

\textbf{ME591} \hspace{1cm} \textbf{ADVANCED TOPICS IN MECHANICAL ENGINEERING}

The course consists of formal lectures and the study and discussion of research papers appearing in the current literature. Students will be expected to participate in the presentation of the lecture material. Topics chosen will be by arrangement with the department.

\textit{Lectures - 3 periods per week (one term)}

Credit(s): \textbf{1}

\textbf{ME593} \hspace{1cm} \textbf{FLOW STABILITY THEORY}

This course introduces the method used in analysing the stability of the fluid motion with respect to infinitesimal disturbances, together with some of the most representative experimental and analytical results. We will talk about the mathematical analysis and physical mechanism of thermal instability, centrifugal instability, and parallel shear flow instability. This course will start with brief reviews on linear systems, wave physics, and Fourier transform. After these preparations we will discuss the general aspects of linear stability theory using the example of Lorenz Equation. This introduction is followed by detailed analysis of the Benard problem, double diffusive free convection, the Taylor problem, and the Kelvin-Helmholtz instability. From there we proceed to discuss topics related to the problem of parallel shear flow instability such as Howard's semicircle theorem, Squire's theorem, the Orr-Sommerfeld equation, Rayleigh's theorem and Fjortoft's theorem. We will give concrete examples such as the stabilities of mixing layer, Poiseuille flow, and plane Couette flow. In the later part of the course we will place emphasis on discussing the stability and transition of the flat plate boundary layer, covering topics such as the Tollmien-
Schlichting wave and related classical experimental work.

3 periods per week (one term)

Credit(s): 1

ME595 PLASMA SCIENCE AND ENGINEERING

Plasmas are composed of a neutral fluid and charged particles and display unique properties as a result of external or induced fields and particle collisions. This course examines the fundamental processes and important mechanisms occurring in partially ionized plasmas. The particle evolution will be described by the Boltzmann equation and its moments and will explore both kinetic and fluid models of plasma behaviour. The course details how the unique and fundamental processes translate into existing and future engineering applications including material synthesis and modification, semiconductor and plasma-assisted microelectronics processing, micro/nanotechnology and advanced electric propulsion for spacecraft.

15. INTERDEPARTMENTAL PROGRAMME IN DEFENCE ENGINEERING AND MANAGEMENT

15. GENERAL INFORMATION

Programme Chair - Dr. Greg Phillips

Telephone: 613-541-6000 ext. 6194
Fax: 613-544-8107

15.1 Programme Offered

The degree Master of Defence Engineering and Management (MDEM) is offered to students of the Land Forces Technical Staff Programme (LFTSP) offered through the Department of Applied Military Science. This is a "professional" one-year Master's Degree awarded by the Royal Military College of Canada and approved by the Ontario Council of Graduate Studies.

The programme of professional studies and complementary academic activities are designed to educate officers in the analysis and definition of operational requirements, and the management of the acquisition and in-service support of Army equipment. Thus the area of specialization of the Master's programme is the application of technology to military systems, and effective and efficient means by which such systems can be procured and supported.

Synopsis Of Programme Features:

- The MDEM uses as its foundation the Land Force Technical Staff Programme
- Select members of the LFTSP are admitted to graduate study for the MDEM degree
- Students admitted to MDEM are required to cover additional material and are assessed to a more stringent academic standard
- The completion of the MDEM is concurrent with the LFTSP programme and the entire period of study is normally one year
- The MDEM curriculum provides approximately 950 hours of curriculum activities
- 45 week academic year consisting of three terms
- The total academic course requirements are the equivalent of eight half-course university credits to which is added the requirement to complete a major research project
15.2 Admission Requirements

Application to the programme is open to individuals who have been selected to be suitable for study in the LFTSP programme. Students wishing to read for the MDEM degree along with the LFTSP course must apply for admission to RMC in accordance with the procedures outlined in the general regulations defined in the RMC Graduate Calendar. Students from LFTSP applying for the MDEM will normally require an Honours bachelor's degree in Science or Engineering, or an equivalent from a recognised university with at least Second Class (70%) standing.

15.3 Admission Procedure

Students seeking admission to the Royal Military College as graduate students should contact the Dean of Graduate Studies and Research and request an Application form and instructions on how to apply. The Application form and corresponding instructions can be found at:

www.rmc.ca/academic/grad/forms_e.html.

15.4 Programme Requirements

Students entering the MDEM programme will be expected to complete successfully the curriculum detailed for the LFTSP, and to undertake and to complete successfully additional graduate work specified by the interdisciplinary committee overseeing the MDEM programme.

In addition to study in the main topic areas, a major requirement for the degree is the completion of the MDEM research project on a subject relative to defence system engineering or engineering management.

All LFTSP students, including those enrolled in the MDEM programme, will submit an acceptable research paper and provide an acceptable oral presentation in accordance with the rules of the LFTSP programme. For students in the MDEM programme this project is a Master's program research project.

Students enrolled in the MDEM programme will have all written work marked in accordance with graduate standards that require they maintain a minimum acceptable grade of B- or 70 %.

15.5 COURSE DESCRIPTIONS

(by area of study)

Command Support Technologies (CST) Area

DEM501 to DEM505

Weapons, Platforms And Survivability Systems (WPSS) Area

DEM507 to DEM509

Defence Management (DM) Area
DEM517 to DEM519

**Systems Engineering (SE) Area**

DEM501 | **MILITARY COMMUNICATIONS SYSTEMS (MCS)**

This course deals with the application of current and evolving communication systems technologies to military usage, in both operational and non-operational settings; with particular emphasis upon communications system requirements for the Land Forces. Students will be taught the fundamentals of communications systems and key parameters in wireless and wired communications. Students will be provided with information on current military systems, current research and development and ongoing staff work on future requirements. Students, through the forum of seminars and case studies, will examine the feasibility and suitability of different technologies for military use.

---

Credit(s): 0.5

DEM503 | **MILITARY INFORMATION SYSTEMS (MIS)**

This course provides a comprehensive grounding in the technologies employed in the development of information systems, particularly those that might be utilized by the military. Students are exposed to topics at progressively higher levels of abstraction, beginning at gate logic and ranging up to distributed transactional databases. This knowledge is used as a foundation for a study of technologies and systems issues (e.g. information security). The lecture material is complemented by laboratory work and by case studies that apply material from across the course in a practical scenario.

---

Credit(s): 0.75
DEM505  INTELLIGENCE, SURVEILLANCE, TARGET ACQUISITION, RECONNAISSANCE AND (ISTAR)
This course examines the key scientific principles involved in military reconnaissance, surveillance, and target acquisition in the context of military operations. Included are optical devices, image intensification devices, thermal imagery systems, ground and airborne sensor platforms, and radar (ground, airborne, space borne, weapons locating). Surveillance and counter surveillance principles and applications are considered as well as data processing, data fusion and global positioning. Students will be provided with information on current military systems, as well as current research and development efforts. Students will investigate and analyse future military requirements in this area.

Credit(s): 0.75

DEM507  MODERN WEAPONS SYSTEMS (MWS)
This course examines the key scientific and technological principles applicable to the design, development, production and employment of current, emerging and potential Weapon Systems. The weapon system is examined within a broad context, from research, development, production, usage and life cycle upgrades to disposal. Current research and development within the industry and defence establishments in Canada and abroad are introduced as well as management approaches to acquisition programmes. The study gives students the knowledge needed to optimize a weapon system in respect to the conflicting technical, tactical and doctrinal information. The material presented will also include: thermochemistry, blast, fragmentation, demolitions and the defeat of armour.

Credit(s): 1

DEM509  VEHICLE SYSTEMS, SURVIVABILITY AND MOBILITY (VSSM)
The course examines the major technical elements contributing to the automotive
performance of military vehicles. Engine torque and power, fuel consumption, transmission ratios/matching, mechanical efficiencies, rotary inertias, road loads (rolling, air, gradient resistances), terramechanics and other factors are examined in sufficient theoretical depth to understand their contributions to automotive performance. To simulate the translation of requirements into engineering specifications typical wheeled and tracked vehicle operational requirements (acceleration, speed, range, etc) and constraints (mission, weights, etc) are examined and, through calculations and trade-offs, major automotive sub-system characteristics are determined for various operational scenarios. Important interfaces with non-automotive mission equipment will also be examined.

---

Credit(s): 0.75
analysis techniques appropriate for defence procurement analysis including game theory, decision trees, multi-criteria decision analysis, and cost-performance trade-off analysis. The second part provides an introduction to the subject matter of probability and statistics relevant to defence procurement analysis. Topics include: conditional probability; renewal processes; distribution theory, including discussion of the binomial, normal, and exponential distributions; moments of random variables, including the mean and variance, sampling distributions; hypothesis testing, including resampling approaches; confidence intervals, regression analysis, forecasting and experimental design.

---

Credit(s): 1

DEM515  MODELLING AND SIMULATION (MS)
This course introduces students to modelling and simulation in the context of defence procurement. Topics include optimization (linear and integer programming), some queuing and inventory theory, Monte Carlo simulation, process simulation, and war gaming. The emphasis is on war gaming including the design and execution of war games and the interpretation of war-gaming outputs. Assessment will be through a combination of tests, assignments, and case studies.

---

Credit(s): 1

DEM517  SYSTEM INTEGRATION (SI)
This course builds on the knowledge gained in the Courses in the Command Support Technologies (CST) and Weapons, Platforms and Soldier Systems (WPSS) Professional Knowledge Areas. It examines, through the extensive use of Case Studies how requirements are traded-off and technologies are integrated onto a platform to produce a viable weapon system. It also examines the Human Factors involved with such integration.
**DEM519** | **ENGINEERING AND LOGISTICS MANAGEMENT (ELM)**

This course deals with the management of complex System Engineering issues involved at the Project Manager/Project Director level. It examines the organizations involved, both governmental and in industry, the design process, system effectiveness, test and evaluation, and the development of Integrated Logistics Support systems. The course provides an overview of the analytical and management tools necessary to control effectively the equipment programmes of major crown projects and to support the Defence Management System. The material presented will concentrate on two major elements: Project Organization, and Test, Evaluation and Verification. The first element, Project Organization, will concentrate on coordinating project scheduling/milestones, task durations, resource allocation, and costs as well as interface issues such as external artificial constraints, deliverables, and imposed changes. The second element involves the design of a comprehensive T,E & V programme for an equipment project from initial Developmental testing, through engineering tests, compliance and verification testing (concentrating on System Effectiveness), quality assurance testing, to User Trials.

---

**PR500** | **RESEARCH PROJECT**

A major requirement of the MDEM degree is the completion of a research project on a relevant programme topic. Topic approval from academic and professional advisors is required and students are expected to submit acceptable periodic reports to both. The completion of the project, including the written report and oral examination, develops essential professional competencies. The research project also demonstrates post-graduate level research capability.
16. RMC - CFC JOINT PROGRAMMES
ROYAL MILITARY COLLEGE - CANADIAN FORCES COLLEGE JOINT PROGRAMMES

16.1 Programmes Offered

The Royal Military College of Canada (RMC) has offered academic courses at the Canadian Forces College (CFC) since 1992. Over the years, joint efforts to grant academic credits for portions of the Joint Command and Staff Programme (JCSP), the Advanced Military Studies Programme (AMSP), and the National Security Studies Programme (NSSP) have led to the development of a CFC-based pathway to the Master of Arts in War Studies, Master of Arts in Security and Defence Management and Policy, Master of Defence Studies and Master of Business Administration.

16.2 Admission Requirements

Career officers admitted to CFC courses by competitive selection are deemed to be RMC special category students and will receive RMC credits for the equivalent courses, whether admitted to a program or not. However they must apply to be admitted to a degree programme. Students will be admitted to degree programmes under the general regulations. Officers taking the JCSP, AMSP, or NSSP may obtain credits towards various RMC degree programmes as described in this calendar. The normal minimum requirement for entry into RMC graduate studies degree programmes is a four-year undergraduate degree with a B-average from a recognised University. Some departments impose additional requirements. Please see the various admission requirements by department.

16.3 Admission Procedure

Entry into the graduate programmes is by application and subject to the approval of the Dean of Graduate Studies, and as applicable, the appropriate programme committee. Details of specific programmes can be found in the RMC Graduate Studies Calendar and Continuing Studies information pamphlets. The admission form and corresponding instructions can be found at:

www.rmc.ca/academic/grad/forms_e.html.
16.4 Programmes and Course Credits

Courses offered at CFC under the control of the Department of Defence Studies may be awarded Defence Studies (DS) credits. Not all of the content of these courses is applicable to other degree programmes. The maximum number of DS credits is awarded towards the MDS.

16.4.1 Table of Credits

The following table indicates the number of credits each CFC course taken since 2005 (in its entirety) may contribute towards each degree programme at RMC:

<table>
<thead>
<tr>
<th></th>
<th>MDS</th>
<th>MA (SDMP)</th>
<th>MA (WS)</th>
<th>MBA</th>
</tr>
</thead>
<tbody>
<tr>
<td>JCSP</td>
<td>8</td>
<td>4</td>
<td>4</td>
<td>0</td>
</tr>
<tr>
<td>AMSP</td>
<td>3</td>
<td>1</td>
<td>1</td>
<td>0</td>
</tr>
<tr>
<td>NSSP</td>
<td>4</td>
<td>2</td>
<td>2</td>
<td>2</td>
</tr>
</tbody>
</table>

Note: NSSP students may earn up to six credits towards the MBA as follows: DM529 and WS552(1) are awarded one credit each, without additional work.

RMC transcripts will show CFC course registrations as DS credits, then the appropriate number of transfer credits towards the program to which a student has been admitted. For example, an NSSP graduate applying credits towards the MA(SDMP) will have a transcript showing four courses completed under the NSSP, then two transfer credits for the NSSP under the MA(SDMP) registration. Courses used towards one degree cannot be applied towards another.

16.4.2 Programme Patterns

Students must also be aware of the requirements of the programme patterns for each degree. Please refer to the appropriate Interdepartmental Programme or Department in this calendar for information on the corresponding programme patterns.

- Master of Arts in War
- Master of Arts in Security and Defence Management and Policy
- Master of Business Administration
- Master of Defence Studies

16.5 Academic Regulations

16.5.1 Tuition Fees

Students will pay RMC tuition fees for those courses for which they register through RMC. There are no fees for the CFC courses for which partial RMC credit is given. However, students completing an RMC top-up course will be required to pay one-half the normal tuition charges (i.e. for a one-credit course tuition = half of the normal one-credit course fee, for a two credit course tuition charges will be equal to a one credit course). The current RMC fee structure is published by the Registrar and can be viewed at: [http://www.rmc.ca/academic/registrar/allfees_e.html](http://www.rmc.ca/academic/registrar/allfees_e.html).
16.5.2 Academic Counselling

Students at CFC should consult with CFC Academic Staff. Information on course offerings is found in the Graduate Studies Calendar and other RMC Continuing Studies information pamphlets as well as the Continuing Studies website:

www.rmc.ca/academic/continuing

Chairs of programmes should be consulted for advice on appropriate course and programme pattern selection.

16.5.3 Special Regulations

Those wishing to take advantage of the RMC/CFC joint programme must apply for admission to the RMC graduate programmes within three years of completion of the CFC course, that would give the credits listed in this guide. This date is based on the officially promulgated end date of the applicable CFC course. The CFC will retain all relevant student documents for each course for a minimum period of three years to support this application process. Registration in any course will be provisional until the Graduate Studies Committee has approved the student's admission into a particular programme. Should the student not complete his studies while at CFC, it is the student's responsibility to ensure he registers every term thereafter and pay appropriate fees. Student's wishing to elect the delayed mode must be accepted into a RMC graduate programme and have commenced their top-up work within the three year time limit noted above, otherwise no credits will be given for the CFC course work.

16.5.4 Governing Bodies

The RMC Senate is the governing body for academic regulations for the RMC-CFC Joint Programmes. The RMC/ CFC Inter College Committee (ICC) will govern the application of the regulations of this programme. The Graduate Studies Committee with the assistance of the War Studies Committee, the Security and Defence Management and Policy Committee, the Defence Studies Committee and the Business Administration Department are responsible for the administration, course approval, and management of their respective degree programmes.

16.5.5 Appraisal

For the purposes of these academic programmes, CFC is considered a campus of RMC. Therefore, as part of the RMC academic offerings the joint RMC/CFC programmes are subject to periodic review by the Ontario Council of Graduate Studies (OCGS).
